SURGE PROTECTION MEETS DESIGN

The multi-pole combined modular arresters for protection against lightning strikes and transient surge voltages now have an even more attractive design. In addition to their outstanding technical properties, they are pluggable and provide a clearly readable function control indication and status display. The variable installation position – the base part can be plugged in two directions – enables a flexible and cost-saving wiring.

EASY SETUP, SECURE OPERATION:

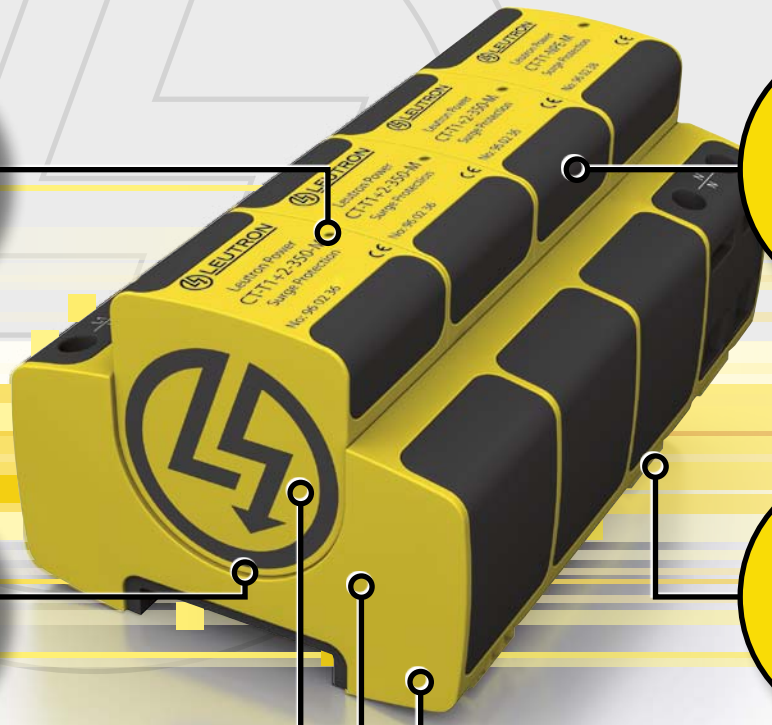
- Easy changing of the protection module thanks to a two-part design with a vibration-resistant locking
- Remote signalling using only one signalling contact – even with 4-pole devices
- Robust and maintenance-free due to the hermetically closed rare-gas-filled isolating spark gap without internal or external trigger electronics

The design allows for an easier handling.

SURGE PROTECTION
FOR POWER SUPPLY SYSTEMS

TWO-PIECE PLUGGABLE SURGE PROTECTIVE DEVICES FOR AC POWER SUPPLY SYSTEMS

The product line »Leutron Power«: Powerful and standardized pluggable modules for almost every power supply system available.



Mechanical status indicator: State of the surge protective device is optically indicated

Locking function: Release of the latches by ergonomically shaped grip lugs

Protection against mismating: Optimized installation due to arresters with coding

Remote signalling: Combined remote contact (changeover contact) optionally available

Turnable plug-in modules: They can be twisted on the basic module, thus, guaranteeing always good readability even with variable wiring

EAC certification

Vibration and Shock test standard: DIN EN 60068-2-6, IEC 60068-2

The letters used have the following significance:

The FIRST LETTER describes the earthing conditions of the supplying power source of the electrical installation:

- **T** direct earthing of one point of the powersource (generally the neutral point of the transformer)
- **I** Insulation of all active components from the earth or connection of one point of the powersource to earth via an impedance.

The SECOND LETTER describes the earthing conditions of the bodies of the equipment of the electrical installation:

- **T** Body of the equipment is earthed directly, regardless of any possible existing earthing of one point of the power supply,
- **N** Body of the electrical equipment is directly connected to the power system earthing (earthing of the power source of the electrical installation).

SUBSEQUENT LETTERS describe the arrangement of the neutral conductor and the protective conductor:

- **S** Neutral conductor and protective conductor are separate from each other,
- **C** Neutral conductor and protective conductor are combined (in one conductor).

* according to the lightning protection zones concept

Energetic coordination of surge arresters (SPDs)

Coordinated SPD protection is an integral part of the current lightning protection standard DIN EN 62305-4 (VDE 0185-305-4): 2011-10. DIN EN 62305-4 (VDE 0185-305-4) deals with the protection of structures with electrical and electronic systems against the effects of the electromagnetic lightning impulse (LEMP) by a LEMP protection system. The LEMP protection system is called LPMS.

The LPMS consists of the following protective measures:

- Grounding and equipotential bonding
- Spatial shielding
- Cable routing and shielding
- coordinated SPD protection

Purpose of the coordination

The number of SPDs installed in a system to be protected depends on the requirements of the lightning protection zone concept, the strength of the equipment and the characteristics of the SPDs used.
The voltage hazard level of the selected SPD must correspond to the strength of the equipment to be protected and the requirements of the insulation coordination of the low voltage installation.

The energetic coordination must prevent SPDs from being overloaded within the system. For this, the individual load of the SPDs must be determined depending on their installation location and their characteristics.

As soon as two or more SPDs are connected in series, the coordination of the SPDs and the devices to be protected must be checked.

The energetic coordination is achieved if, for all momentum currents, the proportion of energy for each SPD is equal to or less than its energy strength.

The energy resistance can be determined from:

- An electrical test according to IEC 61643-11
- The technical data of the manufacturer of the SPD

The basic principle

The basic principle of energetic coordination between SPDs is that each SPD derives only the amount of disruptive energy for which the SPD is designed.
The energetic coordination is achieved if, for all momentum currents, the proportion of energy for each SPD is equal to or less than its energy strength.

The following standards provide information:

DIN EN 62305-4 (VDE 0185-305-4) Lightning protection standard
IEC 61312-3
IEC 61643-12 for low voltage power supplies
IEC 61643-22 for telecom and signal processing networks
VDE 0100 Part 534 Application standard for low-voltage systems

The practice

In a new construction project for example, the allocation of electrical engineering to different companies (for example, the creation of the main distribution (HV) to the company X and the production of subdistribution (UV) to the company Y.
Company X uses in the NSHV as SPD the make 1 and company Y for its UV the make 2.

In this case, the manufacturer of the SPDs must prove the coordination. If the exact class is known, it is easy for the manufacturer of the SPDs to prove the energetic coordination.
In practice, at least for larger new construction projects, moreover, the HV are spatially separated from the UV accordingly and thus have a sufficient decoupling inductance over the given line length.

Today, modern spark gaps also work without decoupling elements. This is technically implemented in the so-called combi-arresters their application.

Voltage-limiting SPDs (e.g. with varistors) used as type 1 in main distributors (only behind the meter) and type 2 in the sub-distributors do not require any decoupling elements.

Summary

Common practice in new building business and also otherwise, the use of different SPDs of several manufacturers z. B. in main and subdistributions as well as the terminal. Ensuring energetic coordination is relatively easy if the exact SPD class is known and can be easily demonstrated by the SPD manufacturer.

No standard or directive stipulates that overvoltage protection devices ÜSE (SPD = Surge Protective Device) of only one manufacturer may be used in one system.
According to DIN EN 62305-4 (VDE 0185-305- 4), Section 7 Coordinated SPD protection, the selection and installation of an SPD set (Type 1 + Type 2 + Type 3) must comply with the requirements of IEC 61643-12 and IEC 60364-53 for the protection of power supply systems IEC 61643-22 for the protection of telecommunication and data systems.

Leutron's SPDs, like other reputable manufacturers, meet the above requirements. This ensures that the devices comply with the recognized rule of technology.
Regardless of the manufacturer, all SPDs that meet the aforementioned standards have been tested and tested according to the same criteria.

The energetic coordination of the SPDs among each other depends not only on the device itself, but also on the installation (correct cable routing, compliance with cable lengths, impedance of the cable).

Conclusion

Whether a spark arrester or varistor base, a Type 2 arrester can be used behind a Type 1 arrester, and a Type 3 arrester after a Type 2 arrester, regardless of the manufacturer.

The energetic coordination is ensured by compliance with the test standards and the corresponding application standards. Separate decoupling elements are not required for Leutron arresters in combination with third-party products.
The energetic coordination is guaranteed in every case.

Lightning current arrester type 1 for AC power supplies / CT Series

CT-T1

Multipole pluggable lightning current arrester for the use in TNS, TT and TNC systems, with rare-gas-filled spark gap. They provide extremely high discharge cappabilities with at the same time very low protection levels and they also do not need any damageable internal or external electronic trigger.

example image

- Applicable at the boundaries LPZ 0A - 1
- Test standard: IEC 61643-11 / EN 61643-11
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Mounting on 35 mm DIN rail (EN 60715)
- Enclosure material: thermoplastic with the colors yellow and black
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- EAC certification
- No leakage currents, thus, allowing installation upstream of power meters
- Optical sattus indication (red pin appears)
- Single modules can be replaced easily
- Remote changeover contact
- Max. operating voltage remote contact: 250 V AC/125 V DC
- Max. operating current remote contact: 1 A AC/200 mA DC
- Max. locking torque FM terminals: 0,25 Nm

Replacement protective plug for lightning current discharge arresters.

Combined arrester type 1 + 2 for AC power supplies / CT series

CT-T1+2

Lightning current discharge arrester with rare-gas-filled spark gap and very low protection level < 1.5 kV for the use in three-phase TNS, TT aund TN systems. They provide extremely high discharge cappabilities with at the same time very low protection levels and they also do not need any damageable internal or external electronic trigger.

Replacement protective plug for lightning current discharge arresters.

Lightning current arrester Type 1 for AC power supplies / PowerPro

PowerPro B

Multipole lightning current arrester for the use in 1, 2 and 3 phase TNS, TT, TNC, TN and IT systems. The arresters can be installed at the transition 0A to 1 according to the lightning protection zones concept. The SPDs of the series PowerPro B feature a high thermal resistance and an outstanding discharge capability for lightning impulse currents of 50 kA (10/350 µs) per pole. Therefore, they can be applied according to DIN EN 62305 (VDE 0185-305).

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Discharge capacity up to 100 kA (10/350 µs)
- High insulation resistance
- High quenching of follow-on short-circuit currents
- Operates independently of atmospheric air pressure and ambient humidity
- All-in-one protection unit, ready for connection
- Degree of protection according to IEC EN 60529: IP 20
- Mounting on 35 mm DIN rail (EN 60715)
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²

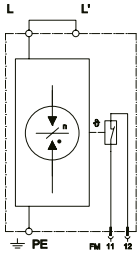
PP B 25-760/FM

Lightning current arrester (class I) for wind energy applications for lightning protection equipotential bonding in 690 V IT systems.

- Test standard: IEC 61643-11 / EN 61643-11
- Degree of protection according to IEC EN 60529: IP 20
- Mounting on 35 mm DIN rail (EN 60715)
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²



Technical Data		
Product name		**PP B 25-760/FM**

IEC category		Type 1 / class I
Nominal voltage AC	UN	690 V~
Max. continous operating voltage AC (50/60Hz)	Uc	760 V~
Insulation resistance	Risol	< 10 GΩ
Protection level	Up	4,0 kV
Response time	tA	100 ns
Lightning impulse current (10/350 µs)	Itotal	25 kA
Max. acceptable back-up fuse F2 (spur wiring)		250 A gG
Max. acceptable back-up fuse F1 (serial wiring)		125 A gG
Max. conductor cross section		50mm² stranded/35mm² flexible
Recommended conductor cross section		25 mm²
Max. connection torque for terminals		4,0 Nm
Installation width		2 TE
Power supply system		between L and PE

Combined arrester type 1 + 2 for AC power supplies / PowerPro

PowerPro BC

Multipole combined arrester for the use in 1, 2 and 3 phase TNS, TT, TNC, TN and IT systems. The arresters can be installed at the transition 0A to 2 according to the lightning protection zones concept. The SPDs of the series PowerPro BC feature a high thermal resistance and an outstanding discharge capability for lightning impulse currents of 50 kA (10/350 µs) per pole. Therefore, they can be applied according to DIN EN 62305 (VDE 0185-305).

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Discharge capacity up to 100 kA (10/350 µs)
- All-in-one protection unit, ready for connection
- No leakage currents, thus, allowing installation upstream of power meters
- Degree of protection according to IEC EN 60529: IP 20
- Mounting on 35 mm DIN rail (EN 60715)
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²

Combined arrester type 1 + 2 for AC power supplies / PowerPro

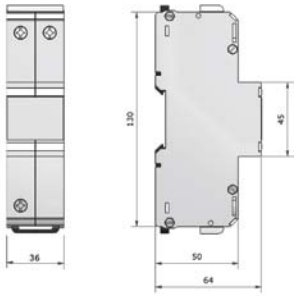
PowerPro BC

For lightning protection equipotential bonding in 400 V TN-C systems e. g.
Wind generator protection

- Test standard: IEC 61643-11 / EN 61643-11
- New developed ceramic isolating spark gap
- Low protection level
- Inflammability class according to UL 94 V0
- leackage current free
- Remote signalling contact (FM): break contact
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification



Technical Data

Product name		**PP BC 50-440/FM**	**PP BC TNC 50-400/690/FM**

IEC category		Type 1 + 2 / class I+II	Type 1 + 2 / class I+II
Nominal voltage AC	UN	400/690 V~	400/690 V~
Max. zul. Bemessungsspannung AC	Uc	440 V	440 V
Insulation resistance	Risol	> 10 GΩ	> 10 GΩ
Protection level at 100% lightn. imp. sparkover voltage (1.2/50µs)	Up	2.5 kV	≤ 2,5 kV
Protection level	Up	≤ 2,5 kV	≤ 2,5 kV
Response time	tA	100 ns	100 ns
Lightning impulse current (10/350 µs)	Itotal	50 kA	150 kA
Lightning impulse current (10/350 µs)	Iimp	- / 50 / - kA	- / - / 150 kA
Follow-on current extinguishing capability at Uc (50/60 Hz)	Ifi	10 kA	10 kA
Short-circuit withstand capability at max. back-up fuse	Ik	50 kAeff	50 kAeff
Max. acceptable back-up fuse F2 (spur wiring)		250 A gG	250 A gG
Max. acceptable back-up fuse F1 (serial wiring)		125 A gG	125 A gG
Operating temperature range	TU	-40 - +80 °C	-40 - +80 °C
Max. conductor cross section		50mm² stranded/35mm² flexible	50mm² stranded/35mm² flexible
Recommended conductor cross section		25 mm²	25 mm²
Max. connection torque for terminals		4,0 Nm	4,0 Nm
Installation width		2 TE	6 TE
Power supply system		between L and PE	3 phase TNC systems

Combined arrester type 1 + 2 + 3 for AC power supplies / PowerPro

PowerPro BCD

Multipole compact combined arresterfor the use in 1, 2 and 3 phase TNS, TT, TN, TNC and IT systems. The installation place of the PowerPro BCD is the main distribution board upstream or downstream of the power meter. According to the lightning protection zones concept in IEC DIN EN 62305 part 1-4 (VDE 0185-305-1-4), it can universally be installed at the transition 0A to 2.

example image

- Test standard: IEC 61643-11 / EN 61643-11
- No leakage currents, thus, allowing installation upstream of power meters
- Rare-gas-filled spark gap, hermetically sealed
- Discharge capacity up to 100 kA (10/350 µs)
- All-in-one protection unit, ready for connection
- Operates independently of atmospheric air pressure and ambient humidity
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²

Combined arrester type 1 + 2 + 3 for AC power supplies / PowerPro

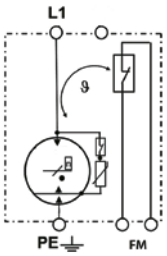
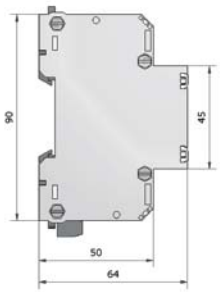
PowerPro BCD-Tr-VA

Leakage-current free version to protect the foundation grounding electrode against AC-caused corrosion. Used as equipotential bonding lightning surge protection in different kind of power net systems.

- Test standard: IEC 61643-11 / EN 61643-11
- No blow-out vents, thus, not requiring any safety clearance to other installations
- Rare-gas-filled spark gap, hermetically sealed
- Surge arrester based on varistors (MOV) and GDT (Gas discharge tube)
- Mounting on 35 mm DIN rail (EN 60715)
- Remote signalling contact (FM): break contact
- Inflammability class according to UL 94 V0
- EAC certification
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²





Technical Data		
Product name		**PP BCD-Tr/25kA-VA/FM**

Max. connection torque for terminals		4,0 Nm
Installation width		2 TE
Power supply system		between L and PE

Combined arrester type 1 + 2 + 3 for AC power supplies / PowerPro

PowerPro BCD LED

Combined modular and compact multi-pole arrester for 1-, 2- and 3-phase TT, TNC and TN systems. The installation place of the PowerPro BCD is the main distribution board upstream of the power meter. According to the lightning protection zones concept in IEC DIN EN 62305 part 1-4 (VDE 0185-305-1-4), it can universally be installed at the transition 0A to 2.

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Monitoring of conductor and arrester via LED
- Not leackage current free
- Discharge capacity up to 100 kA (10/350 µs)
- All-in-one protection unit, ready for connection
- Rare-gas-filled spark gap, hermetically sealed
- Serial wiring with multi-functional terminals
- Operates independently of atmospheric air pressure and ambient humidity
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²

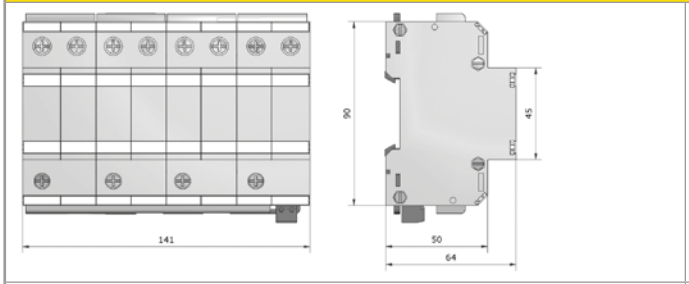
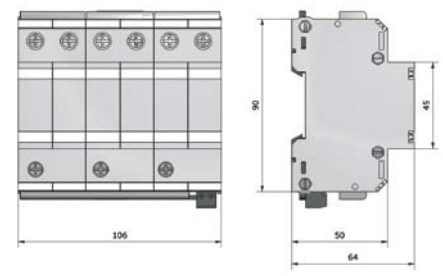
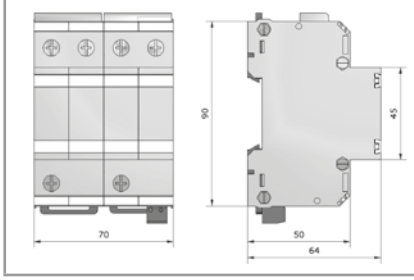
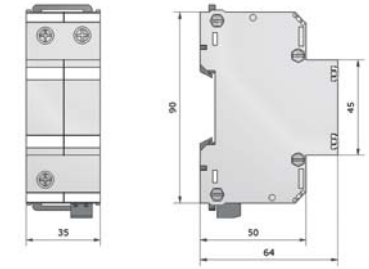
Installation width		4 TE	2 TE
Power supply system		1 phase TN system	between L and N

Dimensions









Lightning current arrester type 1 for AC power supplies / IsoPro

IsoPro B

Multipole lightning current arrester type 1 for the use in 1 , 2 and 3 phase TNS, TT, TNC, TN and IT systems, for protection of low-voltage consumers' installations in business and residential areas against surges caused by lightning or switching actions in the network. The arresters can be installed at the transition 0A to 1 according to the lightning protection zones concept.

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Rare-gas-filled spark gap, hermetically sealed
- No leakage currents, thus, allowing installation upstream of power meters
- Operates independently of atmospheric air pressure and ambient humidity
- High insulation resistance
- Discharge capacity up to 100 kA (10/350 µs)
- All-in-one protection unit, ready for connection
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²

Accessories	
	DAK 2x 16
Article-No.	17 01 10

Pin-shaped terminal to enable feed-through wiring (serial wiring) for all surge protection modules with only one clamp per phase.

Combined arrester type 1 + 2 for AC power supplies / IsoPro

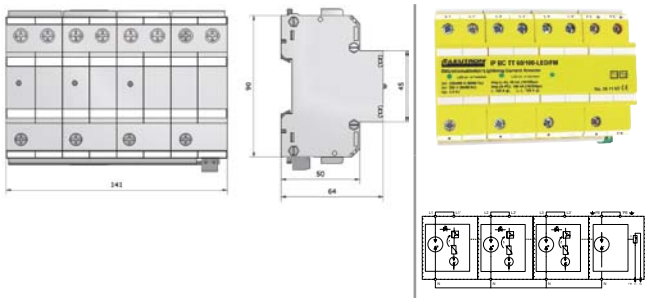
IsoPro BC LED

Combined multi-pole arrester for 3 phase TT systems.

- Test standard: IEC 61643-11 / EN 61643-11
- Arrester status control display: LED green (readiness: on)
- Not leackage current free
- 4 pole; 3+1 NPE
- All-in-one protection unit, ready for connection
- Mounting on 35 mm DIN rail (EN 60715)
- Inflammability class according to UL 94 V0
- EAC certification
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²



Technical Data

Combined arrester type 1 + 2 for AC power supplies / EnerProS

EnerPro S pluggable

Combined multi-pole and plugable arrester e. g. for 3 phase TNS, TT and TNC systems. Mechanical status indicator: State of the surge protective device is optically indicated.

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Place of installation: Main distributer
- High lightning impulse discharge current of 12.5 kA (10/350 µs) per pole
- Mounting on 35 mm DIN rail (EN 60715)
- With remote signalling contact (FM): changeover contact
- Switching capacity FM: AC: 250V, 125V:1A / DC: 48V, 24V, 12V: 0,5A
- Max. conductor cross section FM: 1,5 mm²

Combined arrester type 1 + 2 for AC power supplies / SumPro

SumPro BC

Single pole NPE lightning current arrester class I+II, based on isolating spark gap technology.

- No blow-out vents, thus, not requiring any safety clearance to other installations
- Discharge capacity up to 100 kA (10/350 µs)
- High Insulation resistance
- EAC certification

Devices for 40 mm busbar systems in the pre-counter section

Surge protection with LT ZP ST T1+2+3/3+1-275

The new lightning current combined arresters type 1 + 2 + 3 of the LT ZP ST series for TT and TNS systems meet the requirements of lightning protection class III + IV in residential buildings.

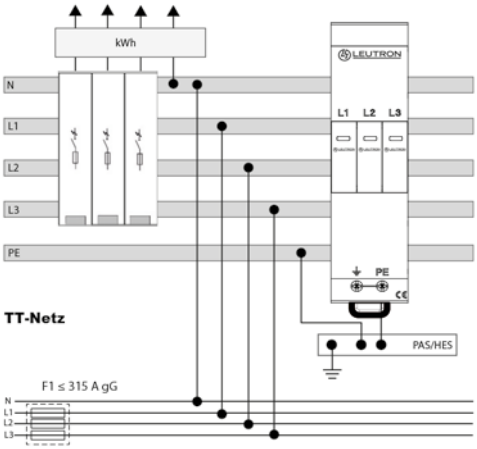
The new LT ZP ST arresters can be snapped into place and fixed with a clip thanks to quick and easy installation on the 40 mm busbar system in the lower connection area of the meter space.

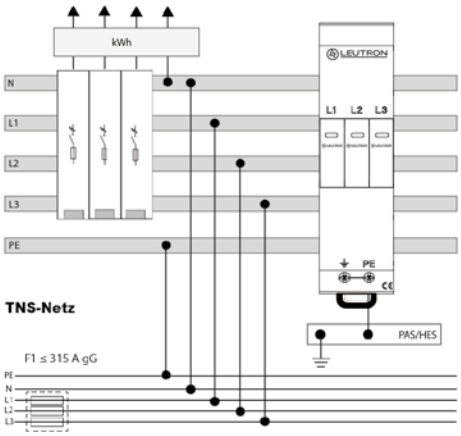
The LT ZP ST arresters offer the highest level of safety when making contact on the 40 mm busbar, with the option of simply disconnecting the highly reliable connection at any time.
The proven spark gap technology enables leakage-free use in the pre-meter area.
The arresters of the LT ZP ST series protect the entire electrical installation including the electronic meter.

LT ZP ST T1+2+3/3+1-275-12.5kA sprotects buildings with external lightning protection

LT ZP ST T1+2+3/3+1-275 -7.5kA protects buildings without external lightning protection

Wiring in 40 mm busbar systems





SPD for 40 mm busbar systems in the pre-counter section

LT ZP ST T1+2+3/3+1

Four-pole, pluggable combined arrester for 3-phase TT and TNS systems (3 + 1 circuit). Location: main distribution board, 40 mm busbar systems. Can be used for lightning protection classes III and IV.

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Combined Arresters Class I+II+III (T1+T2+T3)
- Surge arrester based on varistors (MOV) and GDT (Gas Discharge Tube)
- Leackage current free
- High lightning impulse discharge current of 12.5 kA (10/350 µs) per pole
- Visual function indicator
- Saves energy costs: does not generate any (net) follow-up current, operating and leakage-free

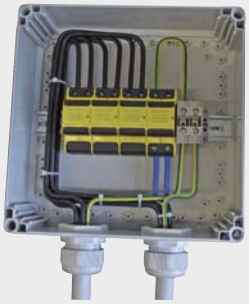
Connection boxes with SPD Type 1 in pre-counter section

AK-T1

Connection boxes in the pre-counter section for the use in 3 phase TT, TNS and TNC sytems according to DIN VDE 0100-443 und -534. Lightning current arrester based on gasfilled spark gaps. They provide extremely high discharge cappabilities with at the same time very low protection levels and they also do not need any damageable internal or external electronic trigger. Place of installation is the pre-counter section in agreement of electrical power grid.



example image

- Applicable at the boundaries LPZ 0A - 1
- Test standard: IEC 61643-11 / EN 61643-11
- Remote signalling contact: changeover contact
- Inflammability class according to UL 94 V0
- Leackage current free
- Optical status indication (red pin appears)
- Degree of protection according to IEC EN 60529: IP 66
- Single modules can be replaced easily
- Sealable

SPD type 2 for AC power supplies / EL series

EL-T2

Fully pluggable surge protective arrester type 2 (class II) for the use in 1, 2 and 3 phase power supply systems. Prewired complete unit consisting of base part and modules. Variants available of 75 up to 750 Volt .

example image

- Test standard: IEC 61643-11 / EN 61643-11
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Mounting on 35 mm DIN rail (EN 60715)
- Inflammability class according to UL 97 V0
- EAC certification
- Remote signalling contact (FM): changeover contact
- Max. operating voltage remote contact: 250 V AC/125 V DC
- Max. operating current remote contact: 1 A AC/200 mA DC
- Max. conductor cross section FM: 1,5 mm²

Nominal discharge current (8/20 µs)	In	20 kA
Max. impulse discharge current (8/20 µs)	Imax	40 kA
Protection level at In	Up	≤ 3,0 kV
Protection level at 5 kA	Up	≤ 2,5 kV
Short-circuit withstand capability at max. back-up fuse	Ik	25 kAeff
Max. acceptable fuse or back-up fuse		125 A gG
Operating temperature range	TU	-40 - +80 °C
Min. conductor cross section at terminals		1.5mm² solid/flexible
Max. conductor cross section		35mm² stranded/25mm² flexible
Enclosure material / colour		Thermoplastic, yellow, UL 97 V-0
Degree of protection (IEC EN 60529)		IP 20
Dimension (DIN 43880)		1 TE
Max. connection torque for terminals		3,5 Nm
Power supply system		between L and N
Max. operating voltage remote contact FM		250 V AC/125 V DC
Max. operating current remote contact FM		1 A AC/200 mA DC
Max. conductor cross section FM		1,5 mm²
Composed of: number of moduls		1x 38 80 06

Technical Data		
Product name		**EL-T2/0+1-NPE**
Article-No.		38 81 98
IEC category		Type 2 / class II
Nominal voltage AC	UN	230 V~
Max. continous operating voltage AC (50/60Hz)	Uc	260 V~
Nominal discharge current (8/20 µs)	In	20 kA
Max. impulse discharge current (8/20 µs)	Imax	40 kA
Protection level N-PE	Up	≤ 1,5 kV
Follow-on current extinguishing capability AC N-PE	Ifi	100 Aeff
Short-circuit withstand capability at max. back-up fuse	Ik	25 kAeff
Max. acceptable fuse or back-up fuse		125 A gG
Operating temperature range	TU	-40 - +80 °C
Min. conductor cross section at terminals		1.5mm² solid/flexible
Max. conductor cross section		35mm² stranded/25mm² flexible
Enclosure material / colour		Thermoplastic, yellow, UL 97 V-0
Degree of protection (IEC EN 60529)		IP 20
Dimension (DIN 43880)		1 TE
Max. connection torque for terminals		3,5 Nm
Power supply system		between N and PE
Composed of: number of moduls		1x 38 80 07

Accessories: Module

SPD type 2 for AC power supplies / EnerPro

EnerPro C

Multipole compact surge protective devices for the use in e. g. 3 phase TNS, TT, TNC systems and 2 phase TT1+1, TN and IT systems.

example image

- Monitoring of conductor and arrester via LED
- Inflammability class according to UL 94 V0
- EAC certification
- Test standard: IEC 61643-11 / EN 61643-11
- Remote signalling contact (FM): break contact
- Switching capacity FM: 250 V/2 A
- Max. conductor cross section FM: 1,5 mm²
- Leakage current-free

SPD type 2 for AC power supplies / EnerPro

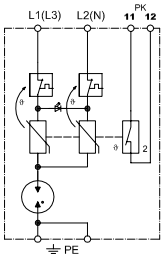
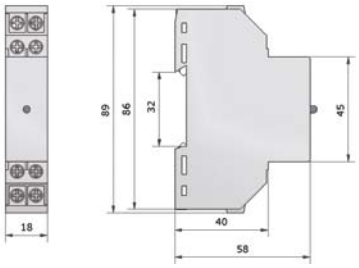
EnerPro 280Tr

Slim and leakage-current free 2-pole surge arrester, e.g. for a 1-phase TN system. Only 1 MW according to DIN 43880.

- Monitoring of conductor and arrester via LED
- Remote signalling contact (Pk): break contact
- EAC certification

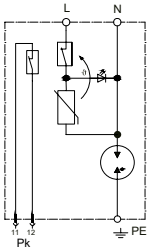


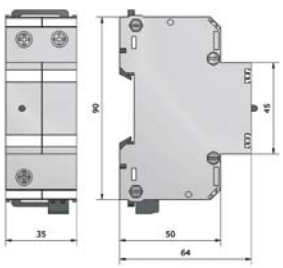


Technical Data		
Product name		**EnerPro 280Tr/Pk**
Article-No.		38 20 29
IEC category		Type 2 / class II
Nominal voltage AC	UN	230/400 V~
Max. continous operating voltage AC (50/60Hz)	Uc	275/480 V~
Protection level at 5 kA	Up	≤ 1,0 kV
Protection level at In (L(N)-PE)	Up	≤ 1,4 kV
Response time	tA	≤ 50 ns
Nominal discharge current (8/20 µs) L(N)-PE	In	15 kA
Max. impulse discharge current (8/20 µs)	Imax	18 kA
Max. allowed fuse or back-up fuse		125 A gG
Operating temperature range	TU	-40 - +80 °C
Enclosure material / colour		Polycarbonate UL 94-V0 / yellow
Mounting on		35 mm DIN rail (EN 60715)
Switching capacity		250 V/2 A
Max. conductor cross section Pk		2.5mm² solid or 1.5mm² flexible with sleeve

EnerPro 282Tr-M

- SPD based on NPE isolating spark gap technology for TT sytems
- leakage current-free
- Monitoring of conductor and arrester via LED
- Remote signalling contact (Pk): break contact
- Degree of protection nach IEC EN 60529: IP 20
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification



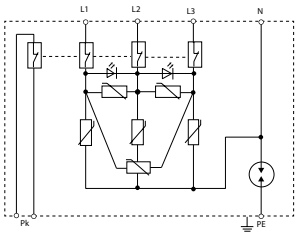


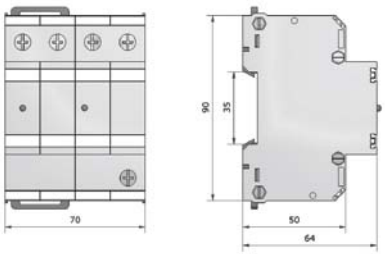
Technical Data		
Product name		**EnerPro 282Tr-M/Pk**
Article-No.		38 20 45
IEC category		Type 2 / class II
Nominal voltage AC	UN	230 V~
Max. continuous operating voltage DC	Uc	275 V=
Response time at 10 kV/µs	tA	< 5 ns
Protection level at 1kV/µs (L(N)-PE)	Up	≤ 1,4 kV
Protection level at In (L(N)-PE)	Up	≤ 1,4 kV
Nominal discharge current L-PE (8/20 µs)	In	10x 15 kA
Nominal discharge current (8/20 µs)	In	40 kA
Service life test current (10/700µs)	IL	500x 100, 10x 500, 1x 40 A
Lightning impulse current (10/350µs) N-PE	limp	12 kA
Max. allowed fuse or back-up fuse		125 A gG
Operating temperature range	TU	-40 - +80 °C
Max. conductor cross section		stranded 35/fine stranded 25 mm²
Max. connection torque for terminals		4,0 Nm
Enclosure material / colour		Polycarbonate UL 94-V0 / yellow
Switching capacity		250 V/2 A
Max. conductor cross section Pk		1,5 mm²

SPD type 2 for AC power supplies / EnerPro

EnerPro 284Tr-M

- Function control indication via LED
- Degree of protection nach IEC EN 60529: IP 20
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification
- Remote signalling contact (Pk): break contact
- Switching capacity Pk: 250 V/2 A
- Max. conductor cross section Pk: 1,5 mm²



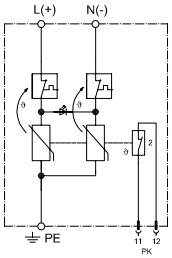


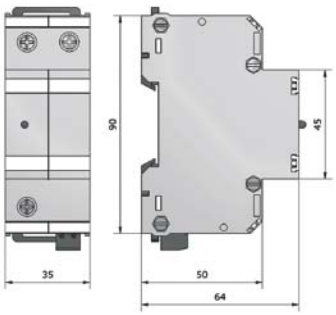
Technical Data		
Product name		**EnerPro 284Tr-M/Pk**
Article-No.		38 20 43
IEC category		Type 2 / class II
Nominal voltage DC	UN	500 (N-PE) V=
Nominal voltage AC	UN	230/400 V~
Max. continous operating voltage AC (50/60 Hz)	Uc	275 V~
Insulation resistance	Risol	≥ 10 GΩ
Impulse sparkover voltage (1.2/50 µs)	Uas	≤ 1,4 (N/PE) ≤1,5 kV
Response time at 10 kV/µs	tA	< 5 ns
Protection level at 5 kA (8/20 µs)	Up	≤ 800 V
Nominal impulse discharge current (8/20 µs)	In	10x 15 kA
Max. impulse discharge current (8/20 µs)	Imax	1x 40 kA
Lightning impulse current (10/350) N-PE	Iimp	12 kA
Max. acceptable fuse or back-up fuse		125 A gG
Short-circuit current extinguishing capacity line-earth		100 A
Operating temperature range	TU	-40 - +80 °C
Max. conductor cross section		50mm² stranded/35mm² flexible
Recommended conductor cross section		25 mm²
Max. connection torque for terminals		4,0 Nm
Power supply system		3 phase TNS and TT systems

EnerPro 150Tr/Pk

Surge protection for equipment and installations up to 100 A and 150 V.

- High performance arrester for 150 V operating voltage
- Line function and equipment control by LED
- Remote signalling contact (Pk): break contact
- EAC certification





Technical Data		
Product name		**EnerPro 150Tr/Pk**
Article-No.		38 20 25
IEC category		Type 2 + 3 / class II+III
Nominal voltage DC	UN	150 V=
Max. continous operating voltage AC (50/60Hz)	Uc	170 V~
Protection level	Up	≤ 1,0 kV
Lightning impulse current (10/350 µs)	Iimp	8 kA
Max. impulse discharge current (8/20 µs)	Imax	40 kA
Max. allowed fuse or back-up fuse		125 A gG
Response time	tA	≤ 25 ns
Max. conductor cross section		50mm² stranded/35mm² flexible
Max. Locking torque Klemmen		1,5 Nm
Operating temperature range	TU	-40 - +80 °C
Enclosure material / colour		Polycarbonate UL 94-V0 / yellow
Degree of protection (IEC EN 60529)		IP 20
Mounting on		35 mm DIN rail (EN 60715)
Switching capacity		250 V/2 A
Max. conductor cross section Pk		1,5 mm²

SPD type 3 for AC power supplies

CT-T3/xxV-16/25A-FM

The SPD is applicable at the transition 2-3 according to the lightning protection zones concept. Pluggable 2-pole surge arrester type 3 (class III) for TN systems with 16 or 25 Ampere (24 up to 275 Volt).

- Line function and equipment control by LED
- Leackage current free
- Remote signalling contact: break contact
- Mounting on 35 mm Hutschiene (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- Space required for installation: 17.5 mm
- Test standard: IEC 61643-11 / EN 61643-11
- EAC certification
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6

SPD type 3 for AC power supplies

EnerPro D

Three pole compact surge protective device e. g. for 1, 2 and 3 phase systems (TNS-, TT-, TNC- and IT-systems). The SPD is applicable at the transition 2-3 according to the lightning protection zones concept.

Image example

- Deepest protection against longitudinal and transverse voltages for loads up to 16 A
- Possible with parallel or spur wiring for >16 A
- Line function and equipment control by LED
- Inflammability class according to UL 94 V0
- Leackage current free
- Remote signalling contact (FM): break contact
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification

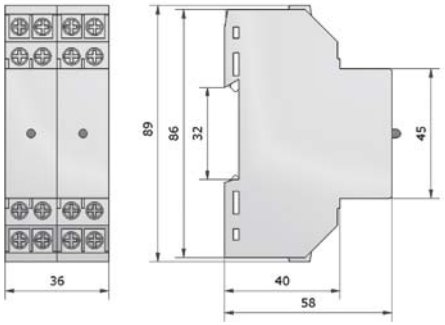
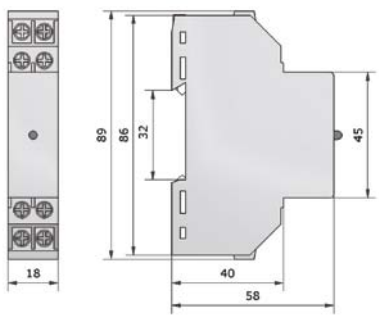
Dimension





SPD type 3 for AC power supplies

EnerPro D TN

Compact 2-pole surge arrester type 3 (class III) for rated voltages from 24 up to 230 Volt in TN systems up to 16 or 25 Ampere.
The SPD is applicable at the transition 2-3 according to the lightning protection zones concept.

Image example

- Test standard: IEC 61643-11 / EN 61643-11
- Line function and equipment control by LED
- Leackage current free
- Practical compact housing with minimum space requirement
- Inflammability class according to UL 94 V0
- Remote signalling contact (FM): break contact
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification
- Space required for installation: 18 mm (1 TE)

SPD type 3 for AC power supplies

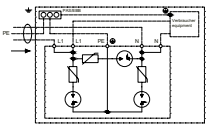
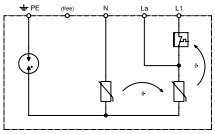
NM 220V

Surge voltage protection module for the protection of single-phase 230 V equipment with max. 16 A power consumption.

Image example

- Applicable at the LPZ transition point 2-3
- Test standard: IEC 61643-11 / EN 61643-11
- Compact module for equipment installation
- Protection against longitudinal and transverse voltages
- No leakage current to PE (leakage current free)
- Valve arrester SPD
- EAC certification





Technical Data

Product name		**NM 220V/5kA**	**NM 220V/20kA/Pk**

SPD type 3 for AC power supplies

EnerPro-T3/230 SDU

Two-pole surge arrester for the protection of electronical devices, for the retrofitting of 230 V flush-mounted boxes.

- Applicable at the LPZ transition point 2-3
- Test standard: IEC 61643-11 / EN 61643-11
- Valve arrester SPD (leakage-current free)
- With acoustic fault indication
- EAC certification

Technical Data		Product name		**EP-T3/230 SDU**
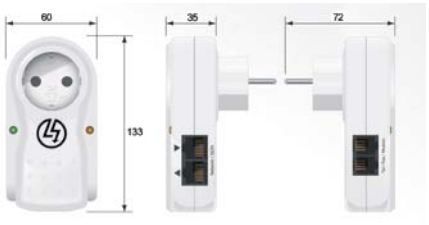
Article-No.		36 20 40
IEC category		Type 3 / class III
Nominal voltage AC	UN	230 V~
Max. continous operating voltage AC (50/60Hz)	Uc	255 V~
Rated load current	IL	16 A
Combined surge	Uoc	6 kV
Protection level L-N	Up	≤ 1,3 kV
Protection level L/N-PE	Up	≤ 1,5 kV
Max. acceptable fuse or back-up fuse		16 A gG
Response time L-N/L,N-PE		≤ 25 / ≤ 100 ns
Nominal impulse discharge current (8/20 µs)	In	3 kA
Max. impulse discharge current (8/20 µs)	Imax	8 kA
Operating temperature range	TU	-20 - +60 °C
Type of connection		3 wire
Montageart		installation in 230V flush sockets
Degree of protection (IEC EN 60529)		IP 21

CPS-F 230

Pluggable combined overvoltage protection for electrical and electronic devices with supply voltage of 230 V. Application for analogue and digital telephone lines, IT and networks. CPS is a plugable combined overvoltage protection unit for electronic devices with 230 Vac voltage.

- Test standard: IEC 61643-11 / EN 61643-11
- Complete optical monitoring of conductor and arrester by LED
- Protection of Telephon/Fax/Modem with RJ11 jack
- Protection of ethernet or ISDN with RJ45 jack
- EAC certification



Technical Data		
Product name		**CPS-F 230/RJ45/RJ11**
Article-No.		32 50 45
IEC category		Type 3 / class III
Max. power		3680 W
Nominal voltage AC	UN	230 V~
Max. continous operating voltage AC (50/60Hz)	Uc	255 V~
Rated load current	IL	16 A
Protection level	Up	1,5 kV
Nominal impulse discharge current (8/20 µs)	In	2,5 kA
Max. impulse discharge current (8/20 µs)	Imax	5 kA
Combined surge	Uoc	6 kV
Operating temperature range	TU	0 - +40 °C
Degree of protection (IEC EN 60529)		IP 20
connections		RJ45/RJ11
Max. continuous operating voltage DC	Uc	180 V=

Surge Protection for new LED Lighting Systems

Many municipalities have already adapted to this situation and are using LED technology when installing new street lighting. (see also: „Kommunen im neuen Licht“, Technical University of Darmstadt, a study funded by the Federal Ministry of Education and Research, May 2013). Funding programmes encourage this transition.

However, it has been found that today's lighting systems cannot easily be replaced by LED technology. Technical design, processing, installation, maintenance and usage require a completely new approach to the new lighting systems.

Often, the planning process does not cover surge protection. A nearby lightning strike with surges of several thousand to ten thousand volts may cause over-voltage damages, that require the replacement of LED lamps and, thus, may burden municipal funds furthermore.

Surge arresters should preferably be placed in the lamp head close to the sensitive elements like control unit, ballast, driver electronics, printed circuit board carrying the LED lamps and optical sensors.
For already installed LED street lighting the lightning and surge protection can be added into the lamp head afterwards. In this case, an installation of surge arresters in the cable junction box at the stub of the lamppost is recommended.
Additionally, the control cabinet has to be protected against surges.

A lightning current arresters of class I should be used for the power supply (see fig. 1).

Whereas, a lightning current arrester of class II provides the best protection for the control electronics inside the control cabinet (see fig. 1).

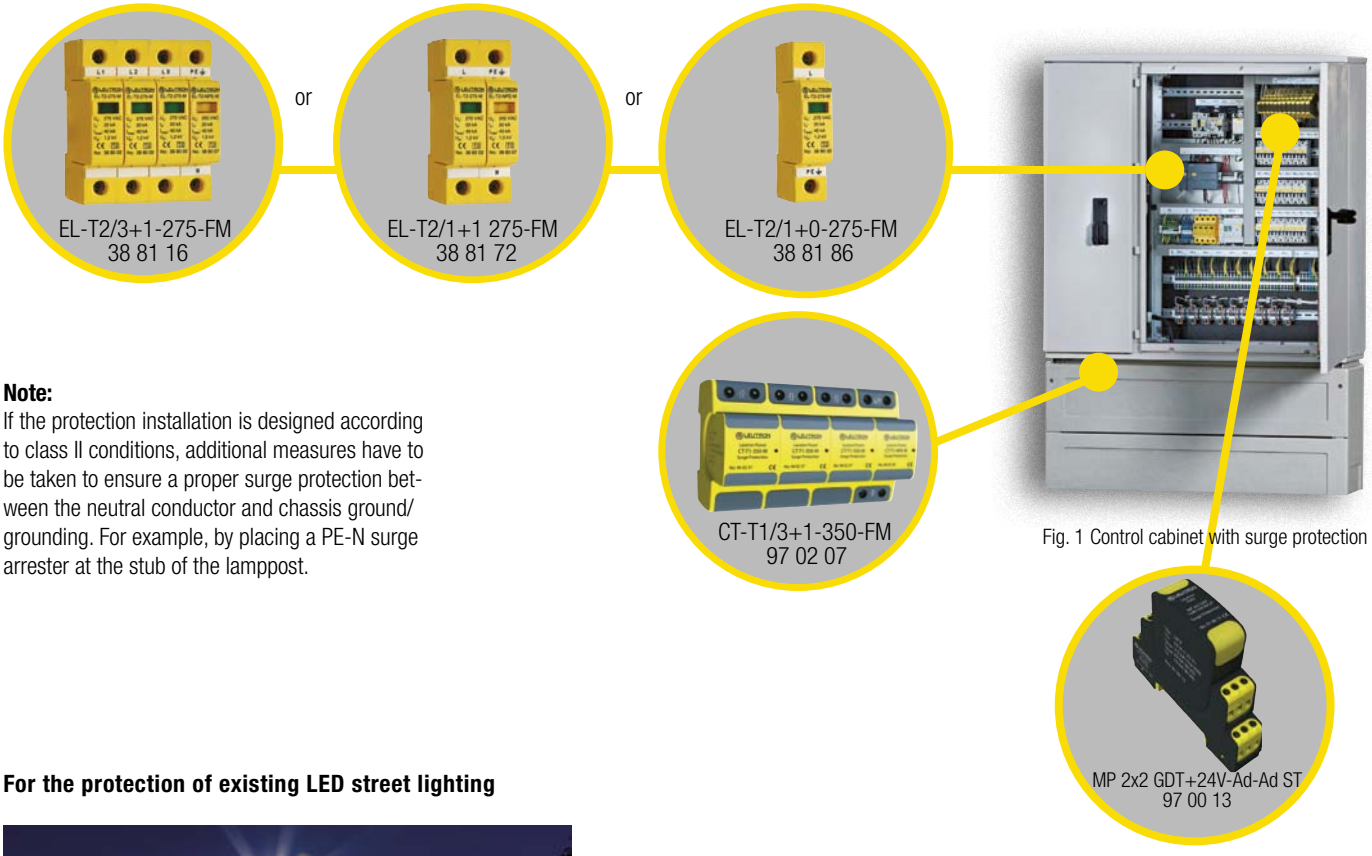


Fig. 1 Control cabinet with surge protection

Note:
If the protection installation is designed according to class II conditions, additional measures have to be taken to ensure a proper surge protection between the neutral conductor and chassis ground/ grounding. For example, by placing a PE-N surge arrester at the stub of the lamppost.

For the protection of existing LED street lighting

Fig. 2 LED street lighting (Source: TRILUX GmbH & Co. KG)

Protection of the electronic ballast

DC Power Supply

EnerPro V/100A-Tr

Surge voltage protector for equipment power supplies and installations up to 100 A and 48/60 Volt. A very low protection level allows the use as SPD class III.

image example

- High performance surge protector
- Valve arrester SPD (leakage-current free)
- Function control indication via LED
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- Remote signalling contact (Pk): break contact
- Inflammability class according to UL 94 V0
- Dimension (DIN 43880): 2 TE
- EAC certification

DC Power Supply with filter

EnerPro 6A/LED

Surge voltage arrester for electrical and electronical devices in looped-in wiring, with disconnection device without interruption of the power supply. A very low protection level allows the use as SPD class III.

image example

- Two-pole SPD for operating current up to 6 A
- Arrester status control display: LED green and red
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- EAC certification
- With low-pass filter
- Dimension (DIN 43880): 3 TE

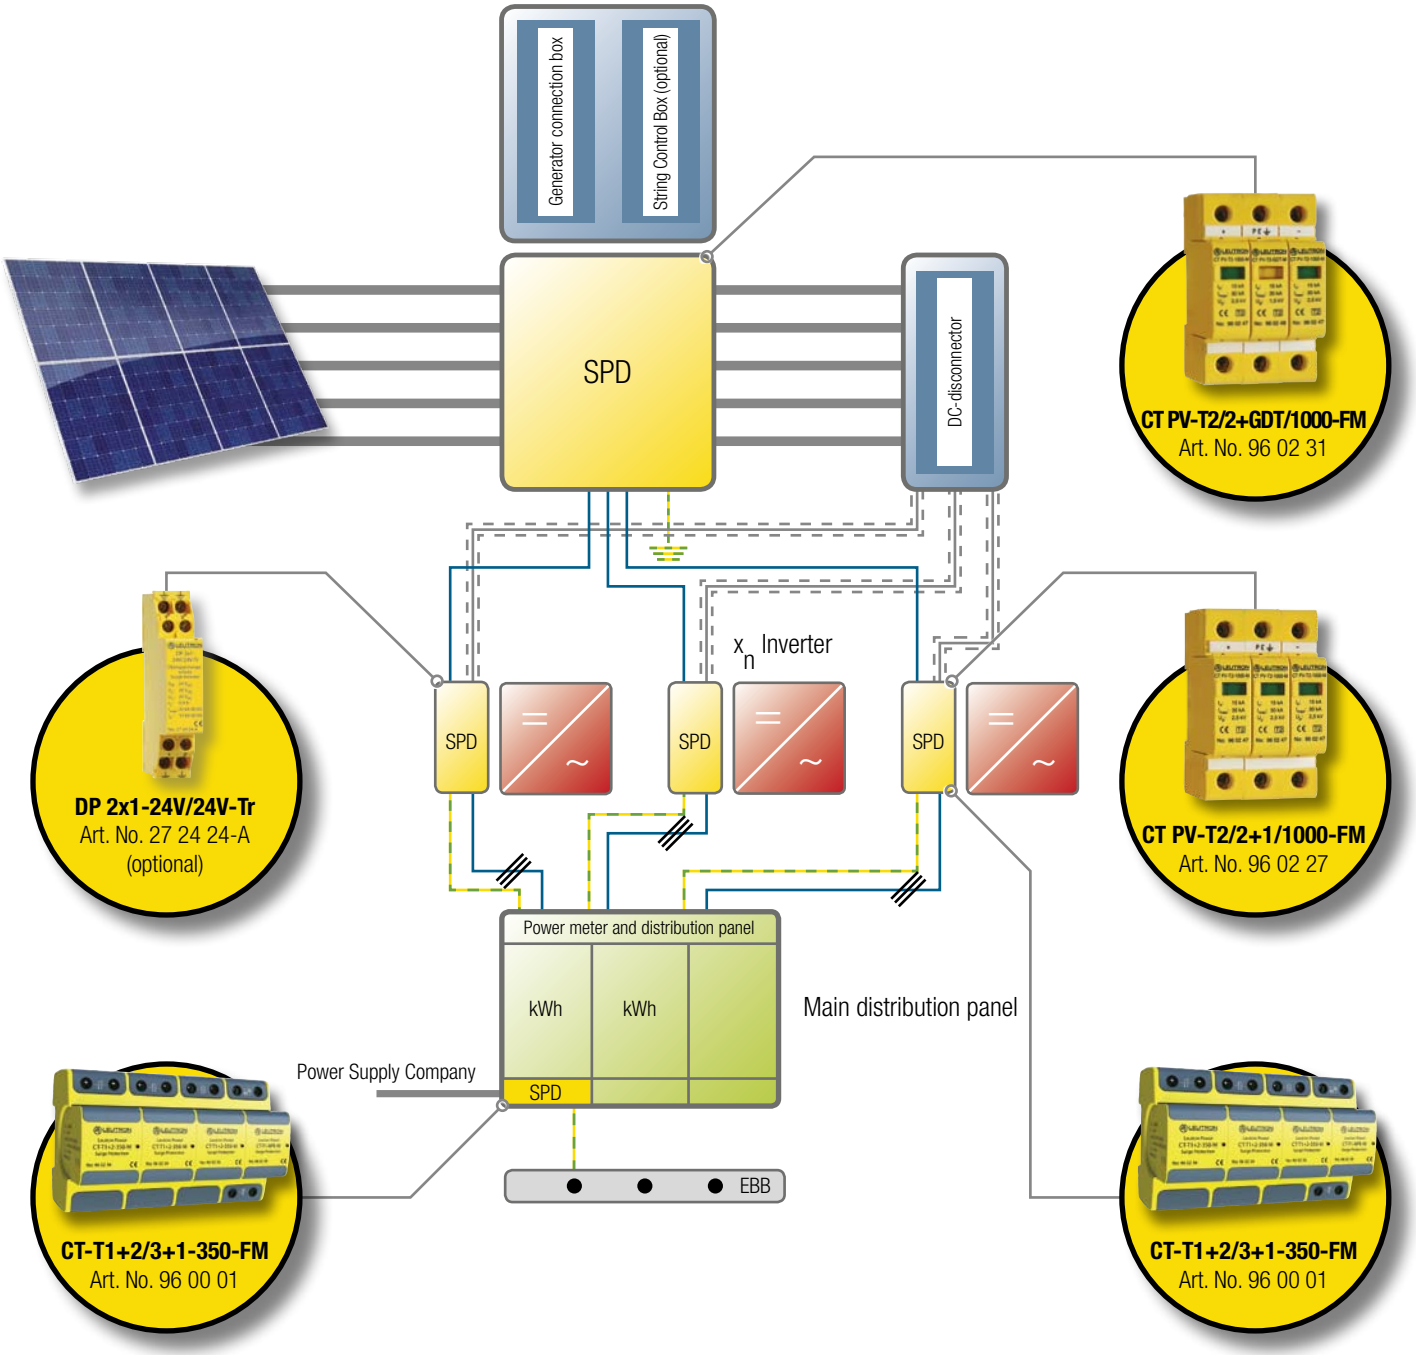
Leutron protects the future

Because photovoltaic systems (among other things) are the future. Whether for new buildings or for renovations, for private residences or for office buildings: these systems are being installed on more and more roofs across Germany.

In addition to the modules, the photovoltaic system is also integrated into the building's electrical systems, which are necessarily vulnerable todirect or indirect lightning strikes. Lightning strikes and power surges have serious consequences: aside from production losses, there are also high repair costs - Costs that Leutron can keep down.



PV SYSTEMS FOR THE HOME

There is one point to bear in mind when installing PV systems in private residences with lightning protection systems:
The lightning rods must be distanced from the PV modul in such way that lightning discharge are prevented, while casting as little shade as possible onto it on the other. The length and place of the air termination rod must also be choosen accordingly.

Specifications for adjustment of the protection area of the lightning rod are given in VDE 0185-305-3. The space (s) between the photovoltaic system and the air termination rod should be greater than 0.5 m.
If it is not possible to leave a buffer space, then a direct electroconductive connection must be installed between the external lightning protection system and the PV module frame.

The purpose of this is to prevent lightning currents from flowing through the module frame construction. Thus, the electrical connection between the air terminaton rod and the frame construction is made on one side only, preferably on the side of the outgoing lines from the external lightning protection.

LEUTRON PROTECTS PHOTOVOLTAIC SYSTEMS UP TO 1000 V DC

When applying surge protection devices (SPDs) in PV installations some specifics have to be considered. In contrast to the application of SPDs ac systems, PV installations contain a dc generator circuit with specific features. These specific features have an influence on the design of the protection system, and the SPDs have to be selected accordingly.

The SPDs for PV installations have to be laid out to fit the maximum no-load voltage ($U_{OC\ STC}$ = voltage of the no-load circuit at standard test conditions) of the solar generator as well as for a maximum availability and security of the PV installation.

Photovoltaic is an essential pillar of energy generation in the area of renewable, respectively regenerative energies. This does not only apply to Germany but to important export markets like Southern Europe and North America as well.

The standard DIN VDE 0100 (VDE 0100) part 712 [1] for the erection of PV installations exists since June 2006. This standard is harmonized on a European level, i. e. it is a HD document.

Since its transitional period expired on 1st May 2008 the standard is effective and has to be applied.
The standard holds instructions for surge-voltage protection devices and lightning protection.
A surge voltage protection is not expliitly required, but it is recommended (see figure 1). Likewise, the standard points out that when applying a lightning protection the PV installation has to be protected by an insulated air terminal considering the separation distance.

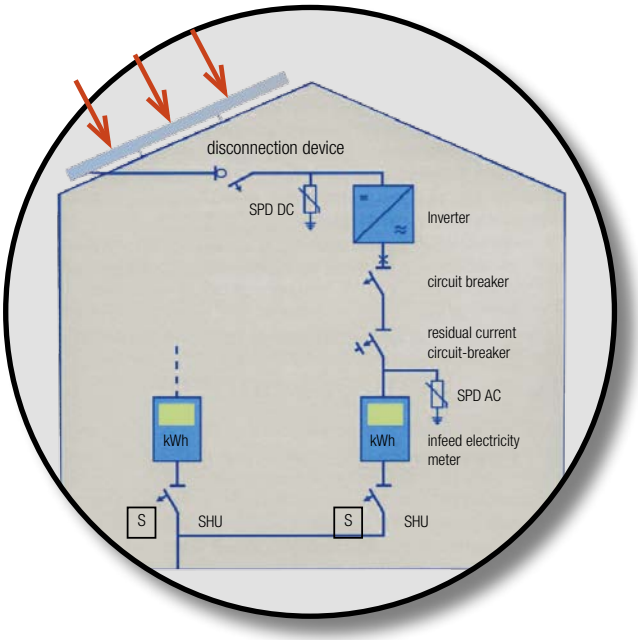

Figure 1: Extract from DIN VDE 0100-712, exemplary

External Lightning Protection

Due to their large-area setup and often exposed location PV installations are especially prone to atmospheric discharges like lightning. We have to distinguish between direct lightning impacts and indirect effects of inductive and capacitive character.

On the one hand, the necessity of lightning protection results from the requirements of the standard and on the other hand it is defined by the application itself, i. e. if it is an installation on a building or in the field.

Installations on buildings can be divided into installations on buildings with an existing lightning protection system, e. g. public buildings, or those without one, e. g. barn roofs.

Due to their large modules, field installations have a great potential risk of lightning strokes as well. In this case an external lightning protection is advisable to prevent direct lightning strokes anyway.

Corresponding notes are given in DIN EN 62305-3 (VDE 0185-305-3) supplement 2 (dimensioning according to class of protection and lightning protection level LPL III) , as well as in the VdS directive 2010 (for PV installation > 10 kW a lightning protection is necessary).
Additionally measures for surge protection are demanded. Thus, the PV generator is to be protected preferably by a separate air termination. However, if a direct connection to the PV generator can not be avoided, e. g., if it is not possible to maintain the separation distance, the effect of partial lightning currents must be considered.

In order to minimize induced surges only shielded generator main lines should be applied. A shield with a sufficient cross section (minimum of 16 mm² Cu) can be used additionally to divert partial lightning currents.

The same applies to closed metal housings. With cables and metal housings the earthing has to be implemented on both sides. Hence, the generator main line (dc side) lies in an LPZ 1 (lightning protection zone), which allows for an SPD of type 2. Otherwise a type 1 SPD would be necessary.

Application and correct layout of Surge Protective Devices

The application and design of SPDs in low-voltage installations can be considered as a standard solution on the inverter side, while their application and proper dimensioning on the side of the dc PV generator still is a challenge. Firstly, the PV generator has some specifics, and secondly, the SPD is placed in a dc circuit. Conventional SPDs are typically designed for ac systems, and not for dc systems.

For several years now appropriate standards exist, which can be transferred to dc applications in principle. However, in the past, relatively low PV system voltages were used, whereas nowadays they can reach about 1000 V dc at the no-load PV circuit.
Such high dc voltages of the system must be controlled by appropriate SPDs.

The locations where to install SPDs in PV systems in a technically wise and reasonable way depend on the type of the PV system, its concept and its spatial dimensions. Figures 2 and 3 illustrate the fundamental difference:

1. A building with an external lightning protection installation and a PV generator mounted on the roof (building installation).
2. A large-area PV generator (field installation) equipped with an external lightning protection installation as well.

In the first case only the dc input of the inverter is protected due to the short cable lengths, whilst in the second case SPDs are placed inside the connection box of the solar generator (to protect the PV modules) as well as at the dc input of the inverter (to protect the inverter).

If the cable length between the PV generator and the inverter exceeds the distance of 10 m SPDs should be placed close to the PV generator and near the inverter, too. The AC side, i.e. the output side of the inverter and the system infeed point, has to be protected by SPD type 2 at the inverter output as a standard and – at building installations with external lightning protection at the system infeed – by a SPD type 1.

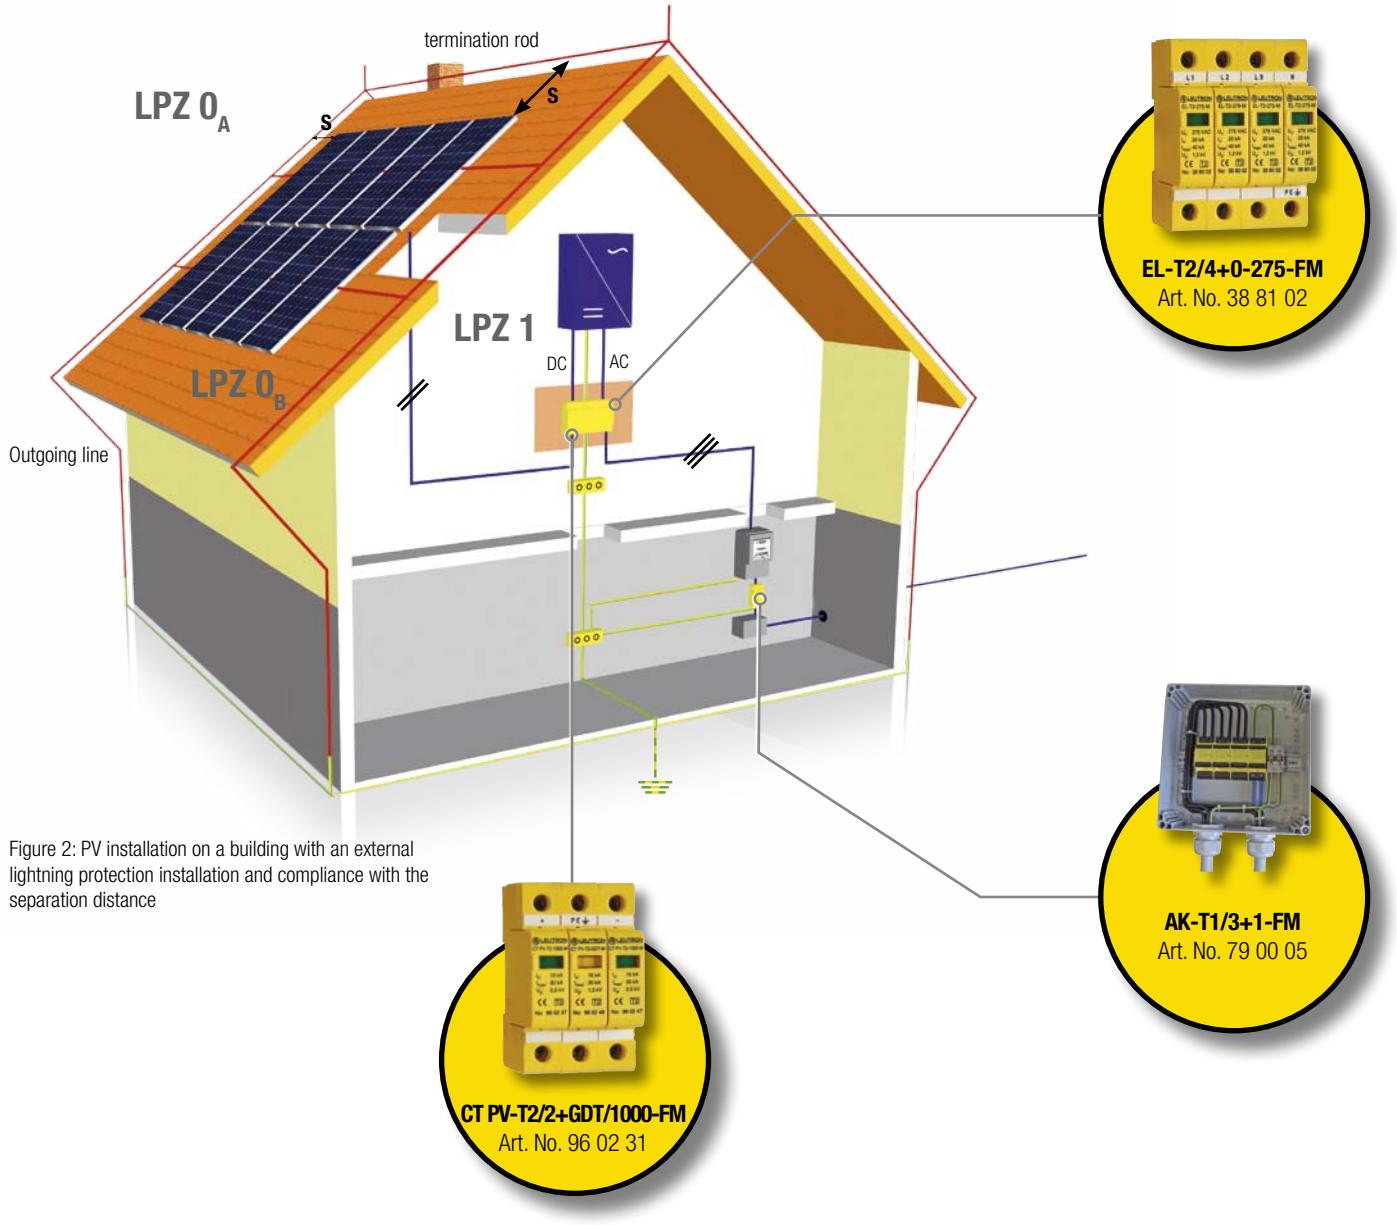

Figure 2: PV installation on a building with an external lightning protection installation and compliance with the separation distance

LEUTRON PROTECTS PHOTOVOLTAIC SYSTEMS UP TO 1000 V DC

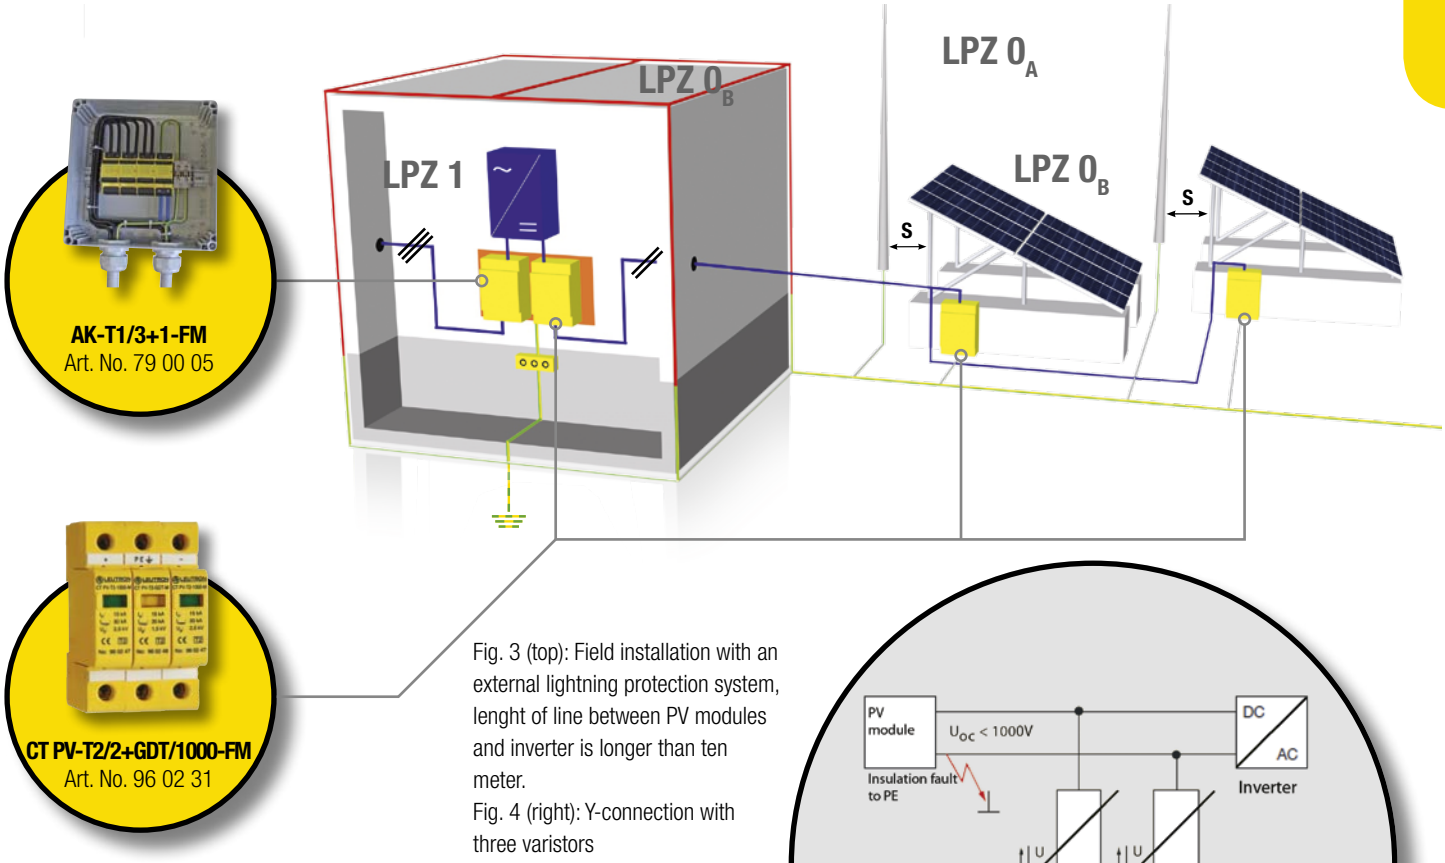

Fig. 3 (top): Field installation with an external lightning protection system, lenght of line between PV modules and inverter is longer than ten meter.
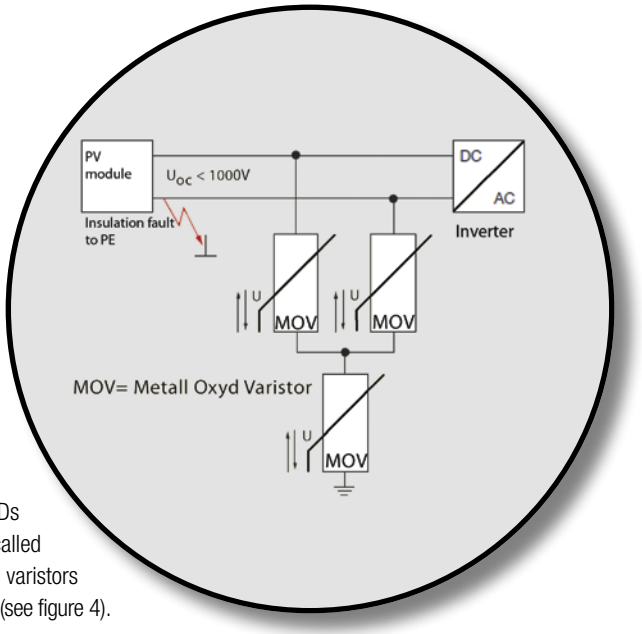
Fig. 4 (right): Y-connection with three varistors
Fig. 5 (bottom): Y-connection with two varistors and a spark gap



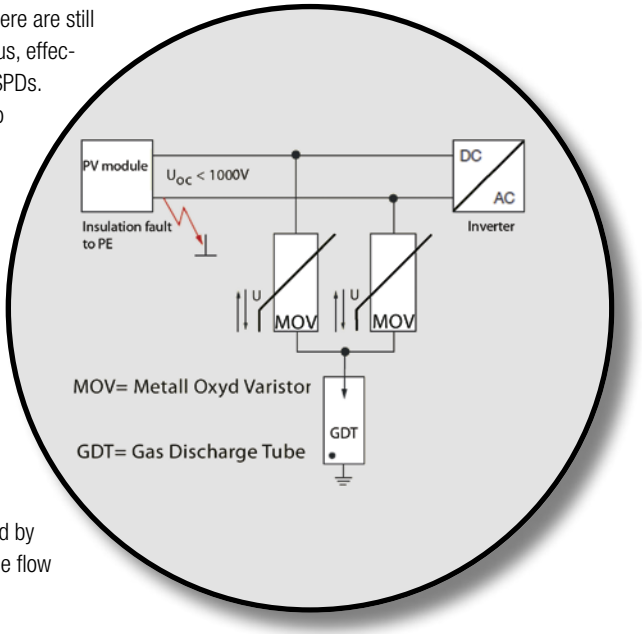
Specifics on the side of dc solar power generator

Until now, SPDs that had been designed for normal supply voltages were used at the dc side to protect both L+ and L- against ground potential. These SPDs were laid out to at least 50% of the maximum no-load voltage of the PV generator.

After years of usage an insulation fault may occur in the PV generator. Due to this error the full voltage of the PV generator would apply to the SPD at the healthy pole, thus, causing an overload. When stressed with permanent high voltages SPDs with metal oxide varistors may break or trigger the disconnection device.

In the worst case, a fire hazard caused by a stationary arc can not totally be excluded when the disconnection device is activated, especially in PV installations with high system voltages.
Even an upstream over-current protection (fuse) presents no solution, since the short-circuit current of the PV generator is only insignificantly higher than the rated current.
Today, PV installations with system voltages of about 1000 V dc are more and more in use, to minimize the power losses as much as possible. In order to adapt the SPDs to system voltages that high the so called Y-connection which consists of three varistors proved itself useful, and is established (see figure 4).

Even in case of an insulation error there are still two varistors connected in series, thus, effectively preventing an overload of the SPDs. Nevertheless, also in this case the so called leakage current flow through the varistors. The probability of increased leakage currents rises with the age of the varistors and with numerous exposures to surge voltages.
In the worst case, these increased leakage currents may cause a fire due to the absence of any dc switching capacity.
Subsequently, two things have to be taken into account: the high permanent voltage at the SPD, e. g. caused by an error at the PV installation, and the flow



of a high leakage current, e.g. due to frequent exposure to surge voltages.
The solution is provided by an Y-connection consisting of two varistors and a spark gap against ground potential (figure 5). The Y-connection prevents a too high permanent voltage at the SPD in case an insulation fault occurs in the PV circuit, and the spark gap itself impedes the flow of a leakage current. In other words, in case of an insulation fault the spark gap prevents the disconnection device to be triggered.

Actually, the series connection of a metal oxide varistor and a spark gap (a gas discharge tube in this case) is nothing new – in memory of the old-established valve arrester. The single difference is the application in a dc circuit.

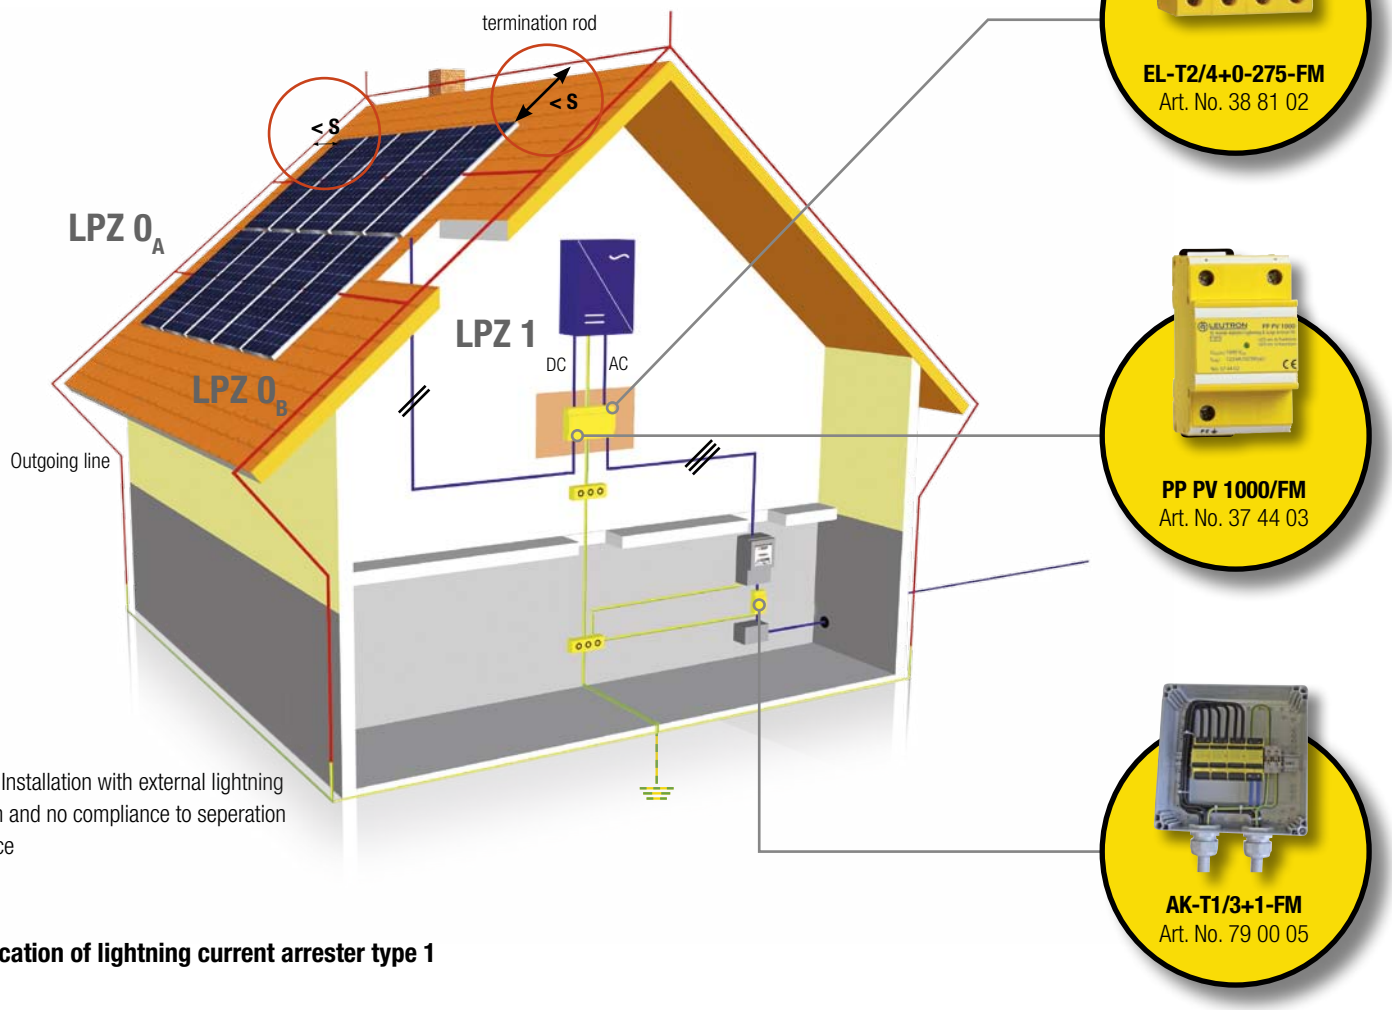


Fig. 6: Installation with external lightning system and no compliance to seperation distance

Application of lightning current arrester type 1

The application of type 1 SPDs on the dc side of the PV systems is recommended when an external lightning protection system is installed and the necessary separation distance between the lightning protection system and parts of the PV generator can not be kept. (cf. fig. 6).

It is advisable to use SPD type 1 on dc site of PV power supply systems if

- an external lightning protection is realized and
- the required seperation distance to elements of the PV power supply systems is not given

The lightning impulse current capability limp per pole of the SPD is selected according to DIN EN 62305-1. The lightning impulse current capability limp of the SPD should be at least 10 kA (10/350 µs) for each active line.

This normative minimum requirements for the type 1 SPDs is entirely fulfilled by the newly developed dc type 1 and 2 combined arresters (T1 + T2).
Leutron's SPDs PP PV 800 and PP PV 1000 type 1 combined arresters (cf. fig. 6) are designed for $U_{OC\ STC}$ voltages up to 800 V dc respectively 1000 V dc at I_{imp} 12.5 kA (waveform 10/350 µs) per pole and therefore for the actual requirements more than sufficiently.

The control is done via special thermal fuses to avoid fire hazard in case of overload. An integrated status display (LED) indicates the actual operation mode. An overload status can also be indicated via an optional remote contact.

All surge protection devices on the dc side (type 1 + 2) have to be selected in a way that in case of a short circuit they are able to transit into a safe mode and to avoid the risk of fire hazard due to an overload or an electric arc.
An overview supporting the SPD selection for PV supply systems is shown in fig. 7.

SELECTION OF SPD FOR PV SUPPLY SYSTEMS

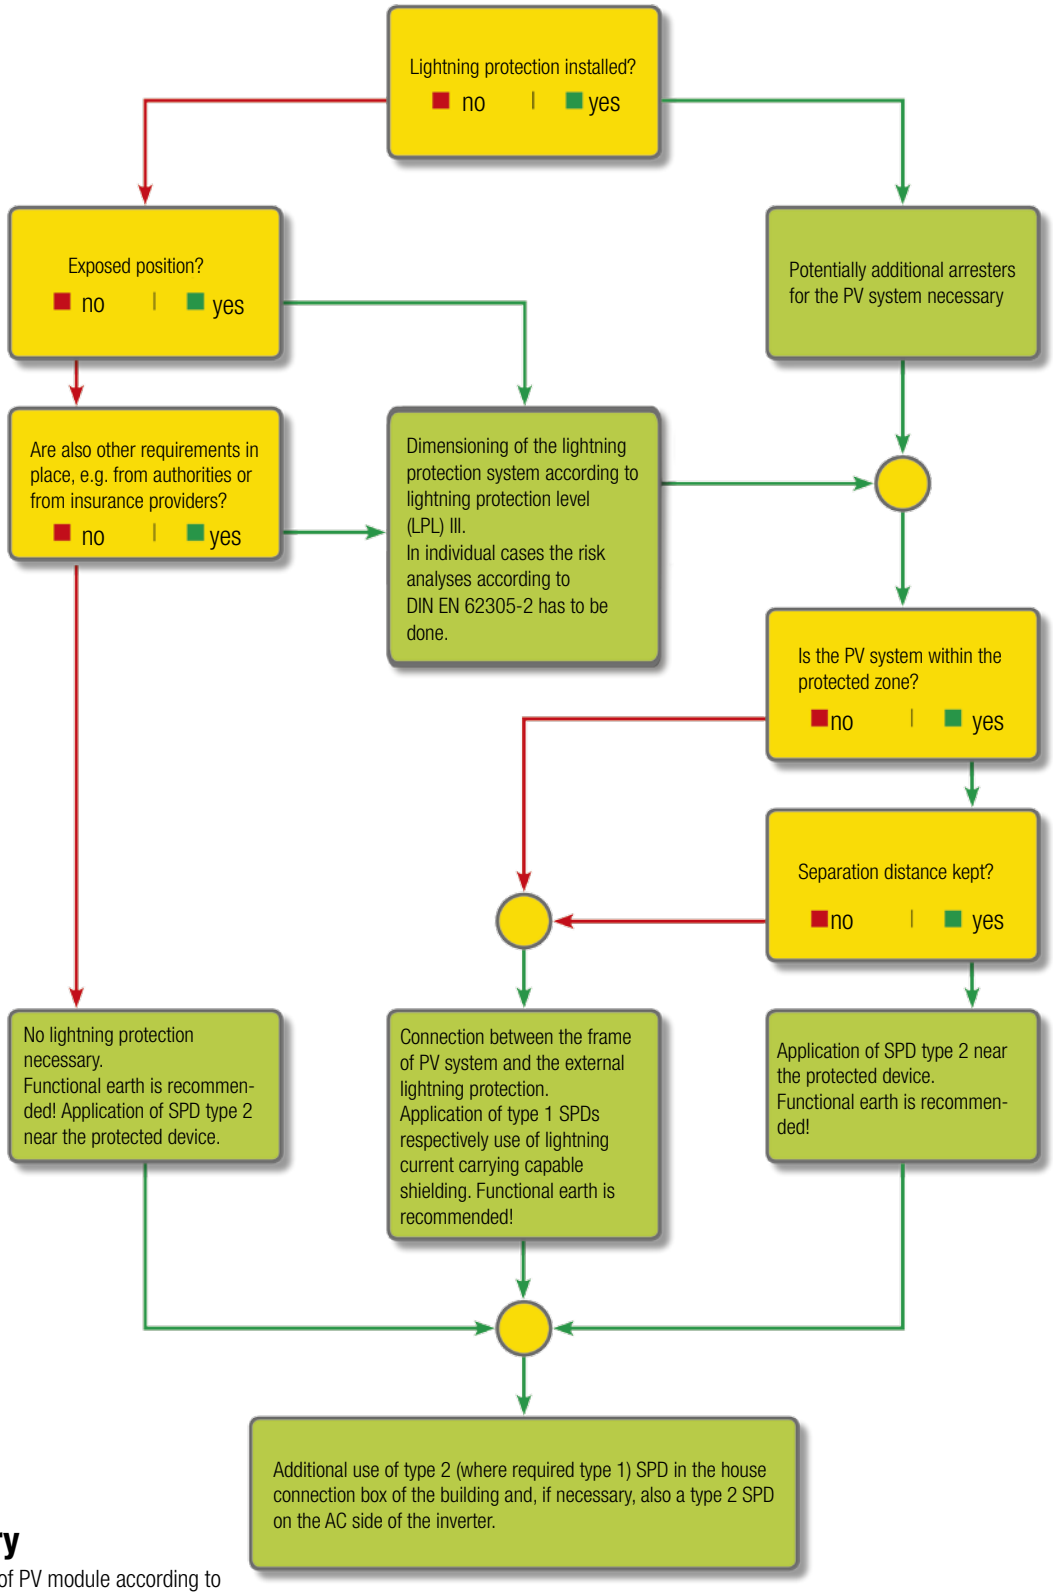

Fig. 7: Flow chart for selecting SPDs in PV supply systems according to DIN EN 62305-3 supplemental sheet 5

Summary

- Installation of PV module according to risk analysis (VDE 0185-3-4)
- Shielding of primary generator line
- Installation of combined arrester
- Installation of combined arrester after entry building point
- Set-up of suitable protection units

Surge arresters for Photovoltaic Installations

PowerPro PV

When applied in PV installations, these devices are placed inside the connection box of the solar generator and on the DC side of the inverter.

image example

- Two-pole combined lightning current and surge arrester DC class I and II
- Applicable at the LPZ transition point 0A-1 and higher
- Test standard: IEC 61643-11 / EN 61643-11
- Mounting on 35 mm DIN rail (EN 60715)
- Space required for installation: 36 mm / 54 mm
- Remote signalling contact (FM): break contact
- Inflammability class according to UL 94 V0
- EAC certification

Surge arresters for Photovoltaic Installations

CT PV-T2

Fully pluggable surge protective arrester for the use in photovoltaic applications. Suitable fuse-free earthed photovoltaic applications with system voltages up to 600 or 1000 Volt DC.

image example

- Applicable at the boundaries LPZ 0B - 1 and higher
- Test standard: IEC 61643-11 / EN 61643-11
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 97 V0
- EAC certification
- Space required for installation: 36 mm / 54 mm
- Remote signalling contact (FM): changeover contact
- 2 + GDT is leakage current-free

Surge arresters for Photovoltaic Installations

EnerPro 803/1003-Tr

When used in PV-installations, they are installed in the generator connection box and on the DC side of the AC converter.
Surge arrester for PV installations, with looped-in wiring.

image example

- Function control indication via LED
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- EAC certification
- Inflammability class according to UL 94 V0

Surge arresters for Photovoltaic Installations

EnerPro 802Tr /1002Tr

These devices (class II) provide overvoltage protection for the dc part in PV installations.
When used in PV-installations, they are installed in the generator connection box and on the DC side of the AC converter.

image example

- Remote signalling contact: break contact
- Function control indication via LED
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- EAC certification

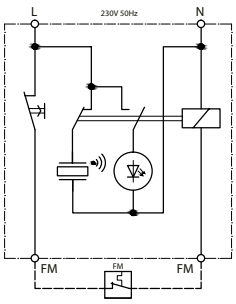
UAS 230-Tr

All-purpose acoustic signalling device with test key for all surge protection devices with the nominal voltage of UN 230 V.

- For monitoring of remote contacts of surge protection devices
- Mounting on 35 mm DIN rail (EN 60715)



Technical Data		
Product name		**UAS 230-Tr**
Article-No.		35 10 30
Nominal voltage AC	UN	230 V~
Max. continuous operating voltage DC	Uc	240 V=
Nominal current	IL	16 A
Max. power		530 (Relais) W
Coil resistance		26,9 Ω
Max. conductor cross section		35mm² stranded/25mm² flexible
Operating temperature range	TU	-25 - +65 °C
Max. conductor cross section FM		1,5 mm²
Degree of protection (IEC EN 60529)		IP 20
Enclosure material / colour		Polycarbonate UL 94-V0 / yellow

All-purpose busbars

The all-purpose busbar is designed to connect the earthing of arrester class II and III lightning and surge voltage components.

- All-purpose busbar for multi-function terminals
- For an optimal bridging of the grounding terminals
- Available in different lengths

DAK 2x16

Pin-shaped terminal to enable feed-through wiring (V-wiring) for all surge protection modules with only one clamp per phase, such as PP PV 800 and 1000 and other SPDs for power supply systems.

- Looped-in wiring for SPD with only one terminal.
- Connection of max. 2x 16 mm² fine-stranded
- Conformed by standard looped-in wiring (V connected)

Technical Data	
Product name	**DAK 2x 16**
Article-No.	17 01 10
Type of connection	vorne Doppelklemme, hinten Stiftanschluss
Conductor cross section	2x 16 mm²
Dimensions (L x B x H)	17 x 38,5 x 21 mm

AK35 GDT230

The solution allows for a subsequent high-resistance and leakage current-free earthing with a gas-filled surge arrester (GDT) against earth at the EP protective devices.

- Equipped with two-pole gas-filled surge arrester 2EL 230Q
- Screw-type terminal
- Mounting by soldering
- Terminals are internally bridged

Technical Data	Product name	**AK35 GDT230**
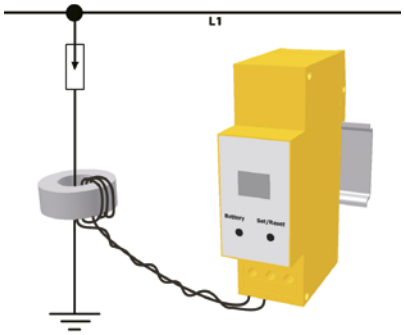
Article-No.	**17 01 00**
Nominal discharge current (8/20 µs)	20 kA
net weight/pc	10 g

Pulse counter

For the potential-free measurement of discharge currents of surge protective devices. Easy snap-on installation on the earth conductor with the help of an two-piece ring core.

- Pulse counting assembly in 1.5 TE DIN rail-mounted device
- including twisted sensor cable (lenght 1 m)
- Batteries are included in the delivery scope
- Push button to adjust the meter reading (e. g. after battery change)

Technical Data	**LC 1**
Article No.	87 00 05
Impulse spark-over wave (rise time >8µs)	> 1 kA
Pulse frequence	< 1 s
LCD display	0 - 99
Power Supply	9 V battery
Operating temperature range TU	-10 - +50 C°
Mounting on	35 mm DIN rail
Enclosure material / colour	Thermoplastic, yellow
Degree of protection (IEC EN 60529)	IP 20
Lenght of connection cable (sensor)	max. 1 m
Dimension (L x B x H)	63 x 27 x 90 mm
Sensor max. cross section	25 mm²

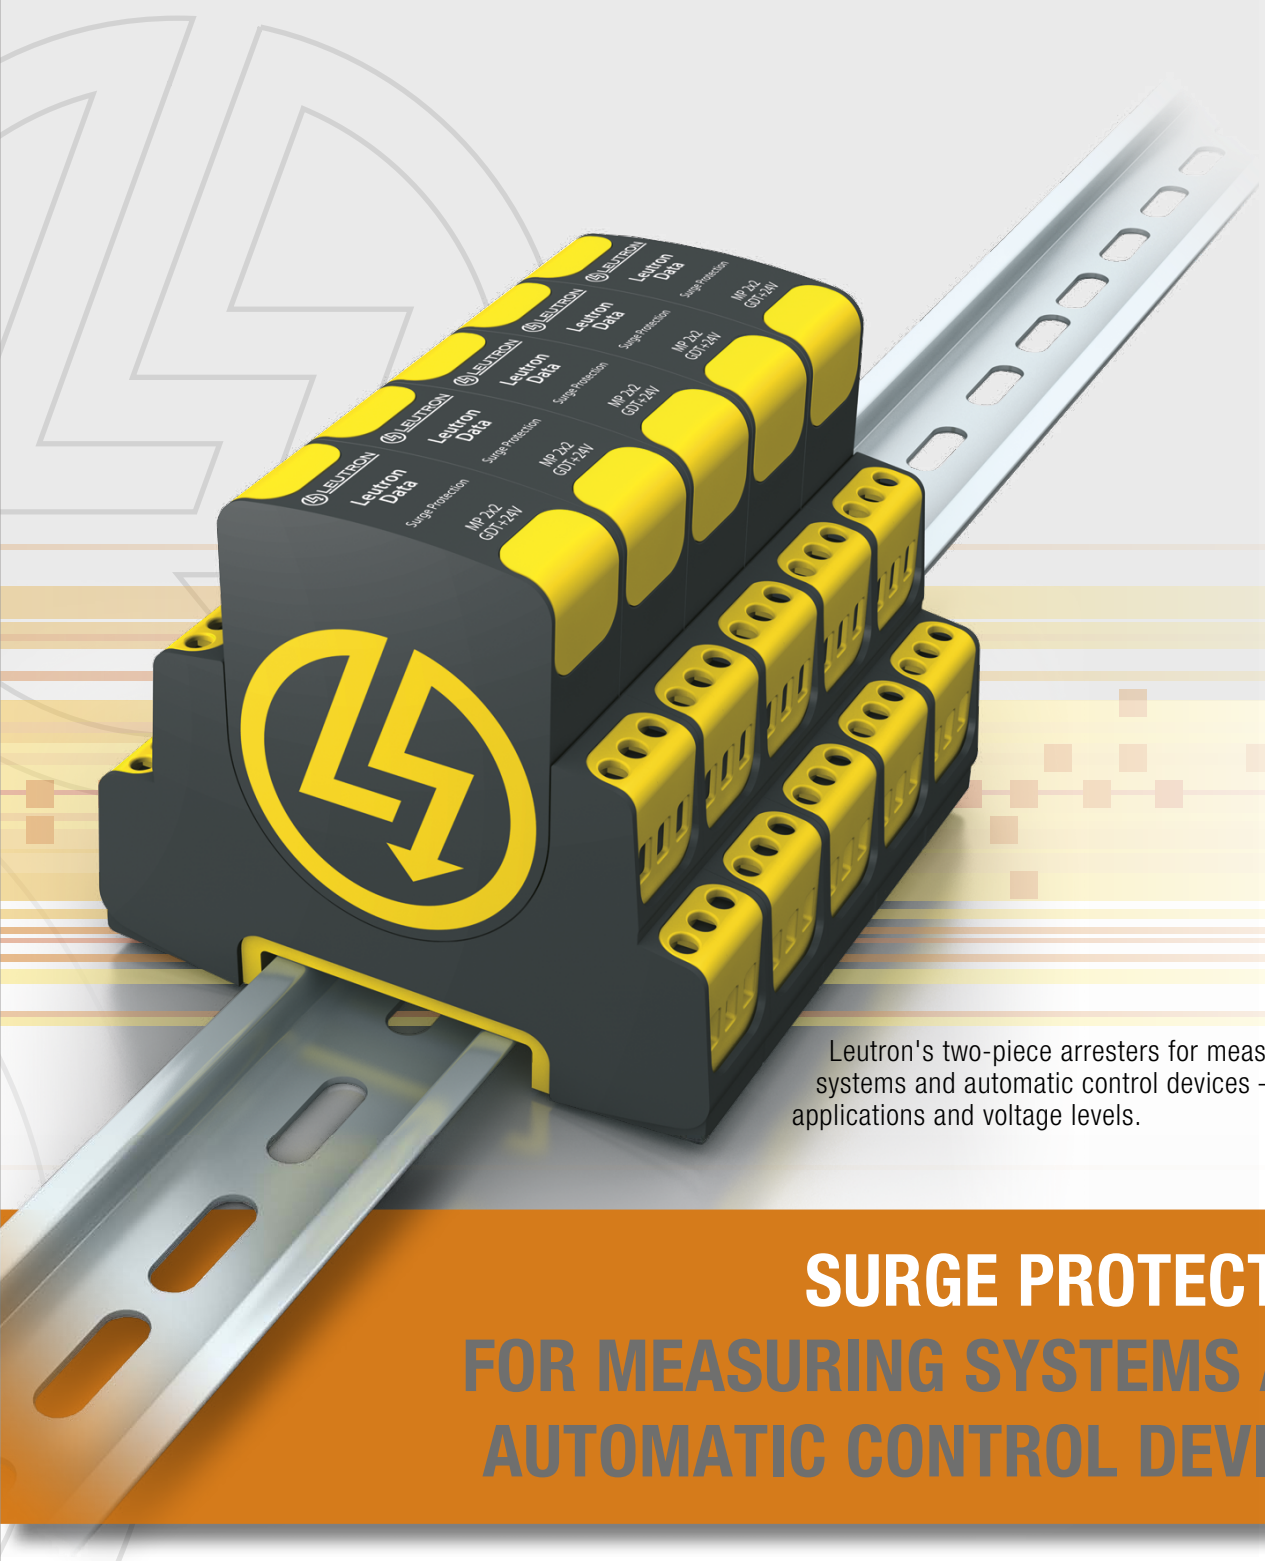
THE NEW ARRESTERS – INTERRUPTION-FREE AND IMPEDANCE-NEUTRAL PLUGGING AND UNPLUGGING WITHOUT INTERRUPTING THE SIGNAL

The two-part protection devices with a construction width of 17.5 mm cover up to seven voltage types. Devices with a one-piece terminal block design and a construction width of only 6.2 mm allow for a high packing density in control cabinets.

Convincing application advantages thanks to a symbiosis of design and optimized packing density – Leutron's arresters for measuring systems and automatic control devices

MORE VERSATILE IN USE:

- Optimized basic modules for direct or indirect shield grounding via gas discharge tubes
- On pluggable surge protective devices the protection module can be detached and replaced without interrupting the signal
- Versions for one pair of wires (1 DA) with two signal lines and for two pairs of wires (2 DA) with four signal lines available



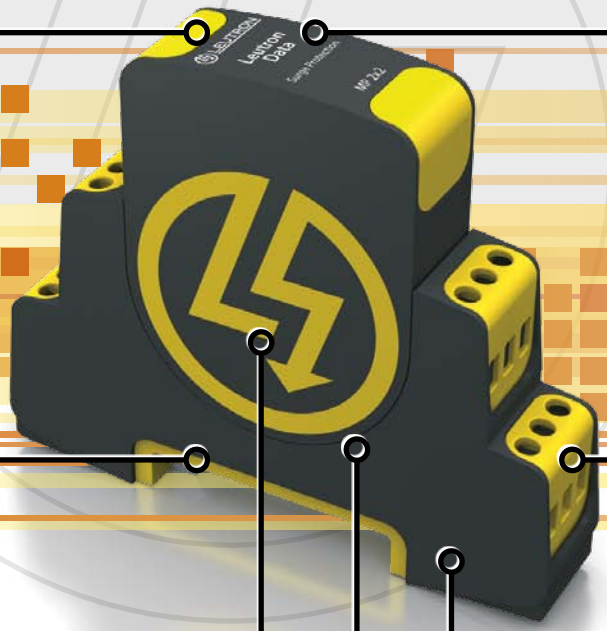
Leutron's two-piece arresters for measuring systems and automatic control devices – for all applications and voltage levels.

SURGE PROTECTION
FOR MEASURING SYSTEMS AND AUTOMATIC CONTROL DEVICES

TWO-PIECE, PLUGGABLE SURGE ARRESTERS

Product line »Leutron Data«:

- Voltage levels from 5 Volt to 180 Volt DC available
- Frequency range: Dependent on the voltage level up to 170 Megahertz



Space-saving installation width of only 18 mm required for up to four single wires

Impedance-neutral replacing of protection modules

Contacting to mounting rail with lightning current carrying capability

Wiring connection up to 4 mm² solid and 2,5 mm² flexible

EAC certification

Variable shield grounding: Basic modules for direct or indirect shield grounding via gas discharge tube available

Vibration and Shoc test standard: DIN EN 60068-2, IEC 60068-2

ONE-PIECE SURGE ARRESTERS

- Voltage levels from 5 Volt to 180 Volt DC available
- Frequency range: Dependent on the voltage level up to 25 Megahertz

Test Categories for SPDs in Information Technology acc. to table 3 of DIN EN 61643-21/VDE 0845-3-1: 2013-07

Category	Test type	Impulse voltage	Impuls current	Minimum number of impulses	Test for
C1	fast rising edge	0,5 kV or 1 kV (1,2/50 µs)	0,25 kA or 0,5 kA (8/20 µs)	300	Surge arrester
C2		2 kV, 4 kV or 10 kV (1,2/50 µs)	1 kA, 2 kA or 5 kA (8/20 µs)	10	
C3		≥ 1 kV, 1 kV/µs	10 A, 25 A or 100 A (10/1000 µs)	300	
D1	high energy	≥ 1 kV	0,5 kA, 1 kA or 2,5 kA (10/350 µs)	2	Lightning current combined arrester

Product standard for surge protection devices for application in telecommunication and signal processing net works - performance requirements and test procedures.

According to the product standard DIN EN 61643-21 (VDE 0845 part 3 all surge protection devices have to be tested during type tests with predefined minimum pulses according to the voltage and current pulses defined in table below.

In doing so, the SPDs are classified into test categories with respect to their specification.

The category C represents disturbance pulses with steep rising edge and low energy level. The category D represents exposures to high energy levels, e.g. partial lightning currents.

Highest level of availability in security systems

Today, complex security systems consist more and more of sensitive electronics. Therefore, it is necessary to include these security systems when considering a lightning and surge protection concept.

Especially, an outage of security installations which are installed at sensitive locations in commerce, industry and private sectors may cause high costs and subsequent damage.

According to insurance associations, lightning strikes and surges are one of the most frequent causes for the breakdown of high quality electrotechnical equipment and, thus, resulting in sub-sequent damage.

As a specialist for fire alarm systems, burglar alarm systems, video surveillance systems or danger detection systems you are the direct contact person for the operator and can assess the weak spots on-site.

Benefit from Leutron's years of experience in the area of internal lightning and surge protection. Our products which are manufactured in Germany constantly prove their reliability through sophisticated technology.

Figure 1 depicts the interfaces of security installations which should be integrated into the security concept according to VDE 0185305 and VdS guidelines.

Advantages of Leutron's lightning and surge protection components in building technology

- Consistent overall concept
- Increased reliability
- Undisturbed operation of IT systems and safety equipment
- Fewer false alarms
- Protection modules of the MP series can be removed and changed without interfering with other signals
- Versions for two pair of wires (2 DA) with four signal lines available
- Space-saving installation of the MP series
- Surges and overvoltages are limited to non-hazardous values (low protection level)

PRODUCT SELECTION

Pluggable SPD with high discharge capability for MCR applications

MP 2x2 GDT ST/ MP 1x2 GDT ST

Plug-in module for consistently pluggable two-parts arrester for signal lines. The protective module can be removed for test or maintenance purposes without changeing the line impedance and therefore influencing the signal level. The base part can remain in the instalation without manipulating or removing any wire.

image example

- Protective for 2 double or 4 single wires at MP 2x2
- Protective for 1 double or 2 single wires at MP 1x2
- Test standard: IEC 61643-21 / EN 61643-21
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Applicable at the boundaries LPZ 0A - 1 and higher
- Mounting on 35 mm DIN rail (EN 60715)
- Enclosure material: thermoplastic
- Space required for installation: 17.5 mm
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- EAC certificated

MP2x2 **2 Double wires 4 Single wires**

MP1x2 **1 Double wires 2 Single wires**

Different base parts provide either direct or indirect earthing of the signal: The MP Base 2x2 (1x2) is not connected to 9/10 of DIN rail linked (galvanic insulation). The MP Base 2x2 (1x2) GDT has a gas discharge tube linked between the connectors 9/10 and the DIN rail and earth connector. Therefore a galvanic insulation between the signal line and the earth connection (PE) can be reached. The MP Base 2x2 (1x2) GND is connected by a bridge to DIN rail (no galvanic insulation).

Pluggable SPD with high discharge capability and low protection level for MCR applications

MP 2x2 GDT/Ad-Ad ST / MP 1x2 GDT/Ad-Ad ST

Fully pluggable two-parts arrester for signal lines. The protective module can be removed for test or maintenance purposes without changeing the line impedance and therefore influencing the signal level. The base part can remain in the instalation without manipulating or removing any wire.

image example

- Protective for 2 double or 4 single wires at MP 2x2
- Protective for 1 double or 2 single wires at MP 1x2
- Protective plug can be removed without changing the line impedance or influencing the useful signal

Pluggable MCR arrester with remote signalling

MP 1x2 GDT/Ad-Ad-FM

image example

Fully pluggable two-parts arrester for signal lines with remote signal contact (FM). The protective module can be removed for test or maintenance purposes without changeing the line impedance and therefore influencing the signal level. The base part can remain in the instalation without manipulating or removing any wire.

- Protective for 1 double or 2 single wires
- Protective plug can be removed without changing the line impedance or influencing the useful signal
- Test standard: IEC 61643-21 / EN 61643-21
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Mounting on 35 mm DIN rail (EN 60715)
- Enclosure material: thermoplastic
- Space required for installation: 17.5 mm
- Applicable at the boundaries LPZ 0A - 1 and higher
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- No additional power supply necessary, saving of costs
- No additional avaluation unit (controller) necessary
- Remote signalling contact (FM): changeover contact
- Switching capacity FM: 1 A/30 VDC // 0,5 A/125 VAC
- Max. switching voltage FM: 110 V DC / 125 V AC

*Accessories: Plug-in socket (Base) for MP 1x2 GDT-FM	
	MP Base 1x2-R-FM
Article-No.	97 00 06

Plug-in socket with remote signalling contact. The MP base 1x2-R-FM is not connected to 9/10 of DIN rail linked (galvanic insulation).

Pluggable SPD with high discharge capability and low protection level for MCR applications

MP 2x2 GDT/Ad-Pg ST / MP 1x2 GDT/Ad-Pg ST

Plug-in module for consistently pluggable, two-parts arrester for signal lines. The protective module can be removed for test or maintenance purposes without changeing the line impedance and therefore influencing the signal level. The base part can remain in the instalation without manipulating or removing any wire.

image example

- Protective for 2 double or 4 single wires at MP 2x2
- Protective for 1 double or 2 single wires at MP 1x2
- Protective plug can be removed without changing the line impedance or influencing the useful signal
- Test standard: IEC 61643-21 / EN 61643-21
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Applicable at the boundaries LPZ 0A - 1 and higher

*Asseccories: Plugsocket (Base) for MP 2x2 GDT			
	MP Base 2x2-R	MP Base 2x2-R GDT	MP Base 2x2-R GND
Article-No.	97 00 00	97 00 01	97 00 91

Different base parts provide either direct or indirect earthing of the signal: The MP Base 2x2-R is not connected to 9/10 of DIN rail linked (galvanic insulation). The MP Base 2x2-R GDT has a gas discharge tube linked between the connectors 9/10 and the DIN rail and earth connector. Therefore a galvanic insulation between the signal line and the earth connection (PE) can be reached. The MP Base 2x2-R GND is connected by a bridge to DIN rail (no galvanic insulation).

Pluggable SPD for high frequency MCR applications

MP 2x2 HF ST / MP 1x2 HF ST

image example

Plug-in module for consistently pluggable two-parts arrester for signal lines for high frequency applications such as bus systems or video transmission. The protective module can be removed for test or maintenance purposes without changeing the line impedance and therefore influencing the signal level. The base part can remain in the instalation without manipulating or removing any wire.

- Max. frequency 70 MHz
- Nominal current 0,5 A
- Protective for 2 double or 4 single wires bei MP 2x2
- Protective for 1 double or 2 single wires bei MP 1x2
- Test standard: IEC 61643-21 / EN 61643-21
- Vibration test standard: DIN EN 60068-2-6, IEC 60068-2-6
- Shock test standard: DIN EN 60068-2-27, IEC 60068-2-27
- Mounting on 35 mm DIN rail (EN 60715)
- Enclosure material: thermoplastic
- Space required for installation: 17.5 mm
- Applicable at the boundaries LPZ 0A - 1 and higher
- Degree of protection according to IEC EN 60529: IP 20
- Inflammability class according to UL 94 V0
- EAC certificated

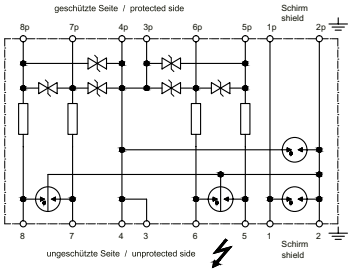
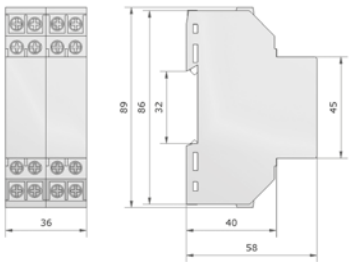
RS485

DataPro RS485-Tr

- Mounting on 35 mm DIN rail (EN 60715)
- SPD for interface RS485
- Inflammability class according to UL 94 V0
- Degree of protection according to IEC EN 60529: IP 20
- EAC certification





Technical Data		
Product name		**DP RS485-Tr**
Article-No.		27 04 85
Nominal voltage DC	UN	5 V=
Max. continuous operating voltage DC	Uc	6 V=
Nominal current	IL	0,5 A
Leakage current at Umax DC		≤ 5 µA
Max. frequency (-3 dB)	fG	1 MHz
Capacitance, line-earth	C	≤ 3 nF
DC resistance	R	1,8 Ω
Series inductance, typ.	L	10 µH
Protection level (line-line)	Up	≤ 8,5 V
Protection level (line-earth)	Up	≤ 600 V
Response time	tA	≤ 1 ns
Nominal discharge current (8/20 µs)	In	10 kA (line/line-PE)
Max. impulse discharge current (8/20 µs)	Imax	25 kA (line/line-PE)
Operating temperature range	TU	-25 - +85 °C
Max. conductor cross section		2.5mm² solid or 1.5mm² flexible with sleeve
Max. connection torque for terminals		1,5 Nm
Enclosure material / colour		Polycarbonate UL 94-V0 / yellow

One-piece SPD for MCR applications for high frequency

DataPro-SDSL-Tr

Surge voltage arrester with a two-step circuit to protect two single wires in data and signal lines. The arrester is especially designed for 24 Volt SPS input lines. It is suited for high-frequency and very fast data transmission. The arrester is applicable at the LPZ transition point 0B - 2 and higher. Alternatively, direct and indirect earthing is possible.

Image example

- High performance surge protector
- Lightning impulse current 5 kA (10/350 µs)
- Transfer rate 100 Mbit/s
- Nominal current 500 mA
- fG > 300 MHz
- For fast dataline signals
- High-resistance shield grounding via shield terminal possible.
- Inflammability class according to UL 94 V0
- Degree of protection according to IEC EN 60529: IP 20
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification

For an optimal bridging of the grounding terminals.

One-piece SPD with high discharge capability for MCR applications

IsoProData-Tr

One-piece lightning current discharge arrester for signal lines with a discharge capabillity for use the at the building entry.

- Protective circuit for 2 signal lines without reference to ground potential
- Applicable at the boundaries LPZ 0A - 1 and higher
- Test standard: IEC 61643-21 / EN 61643-21
- Space required for installation: 17.5 mm
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection according to IEC EN 60529: IP 20
- EAC certification

Cover block terminal of MP series

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

One-piece SPD with low protection level for MCR applications

MP RK/Ad-Ad, MP RK/Ad-Pg, MP RK/Ad-Ad-Pg

Terminal blocks with integrated surge protection can optimize the used space in a control cabinet and at the same time provide high level protection for terminal equipment and devices.

Image example

- Protective circuit for 2 signal lines with common ground or without reference to ground potential
- Applicable at the boundaries LPZ 1 - 2 and higher
- Test standard: IEC 61643-21 / EN 61643-21
- Mounting on 35 mm DIN rail (EN 60715)
- 6.2 mm DIN rail module
- Earthing via DIN rail or connector
- Degree of protection according to IEC EN 60529: IP 20 (with cover)
- Inflammability class according to UL 94 V0
- EAC certification

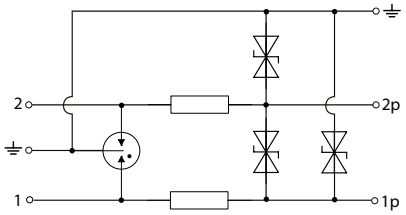
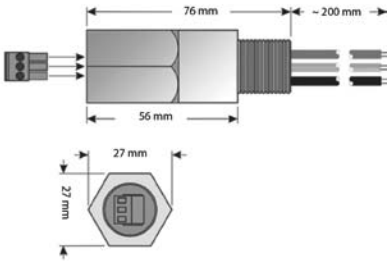
MSR-M20

The protection device is a unique unit providing a level of protection for field-mounted transmitters that is far in excess of the optional transient protection facilities available from the transmitter manufactors - without involving any additional wiring, conduit modifications or other expensive extras.

- Applicable at the LPZ transition point 0B-2 and higher
- Easy mounting directly
- Highest protection level with inline installation
- Low impedance series connection avoids signal degradation of the loop
- Intrinsically safe and flameproof
- Test standard: IEC 61643-21 / EN 61643-21
- Earthing via metal housing
- EAC certification



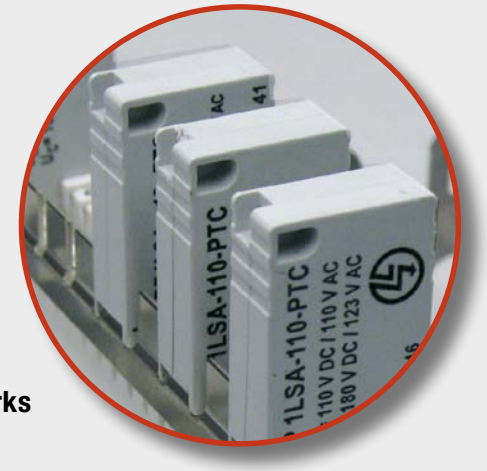


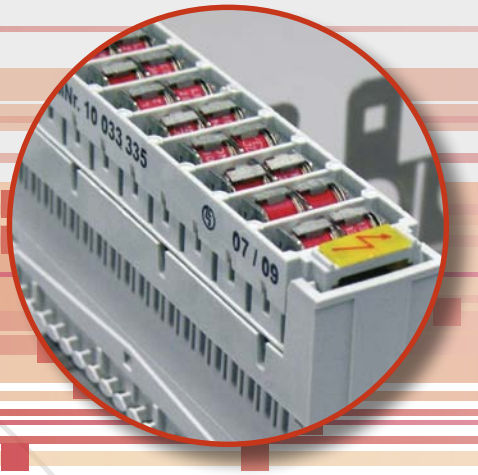
Technical Data		
Product name		**MSR-M20-24V**
Article-No.		97 20 11
IEC category		D1 / C2 / C1 / C3
Nominal voltage DC	UN	24 V=
Max. continuous operating voltage DC	Uc	32 V=
Nominal current	IL	1,5 A
D1 lightning impulse current (10/350 µs) per line	limp	1,0 kA
C2 nominal discharge current (8/20 µs) total	Imax	10 kA
Protection level line-line at In C2	Up	- V
Protection level line-earth at In C2	Up	- V
Series resistance per line	Rs	0,5 Ω
Capacitance line-line	C	≤ 400 pF
Capacitance line-earth	C	≤ 20 pF
Max. frequency Ad-Ad	fG	14 MHz
Operating temperature range	TU	-40 - +80 °C
Terminal input/output		srew/line 1,5 mm²
Conductor cross section single wire		0,08-2,5 mm²
Conductor cross section fine stranded		0,08-1,5 mm²
Length of connecting line		200 mm

COMPREHENSIVE PROTECTION OF ALL COMMUNICATION NETWORKS

For an unobstructed data transmission it is vital to protect the communication networks against surge voltages. Leutron's products reliably protect server rooms, workstations, IT and telephone installations against surge voltages – protection concepts for large-scale as well as for small installations are offered.

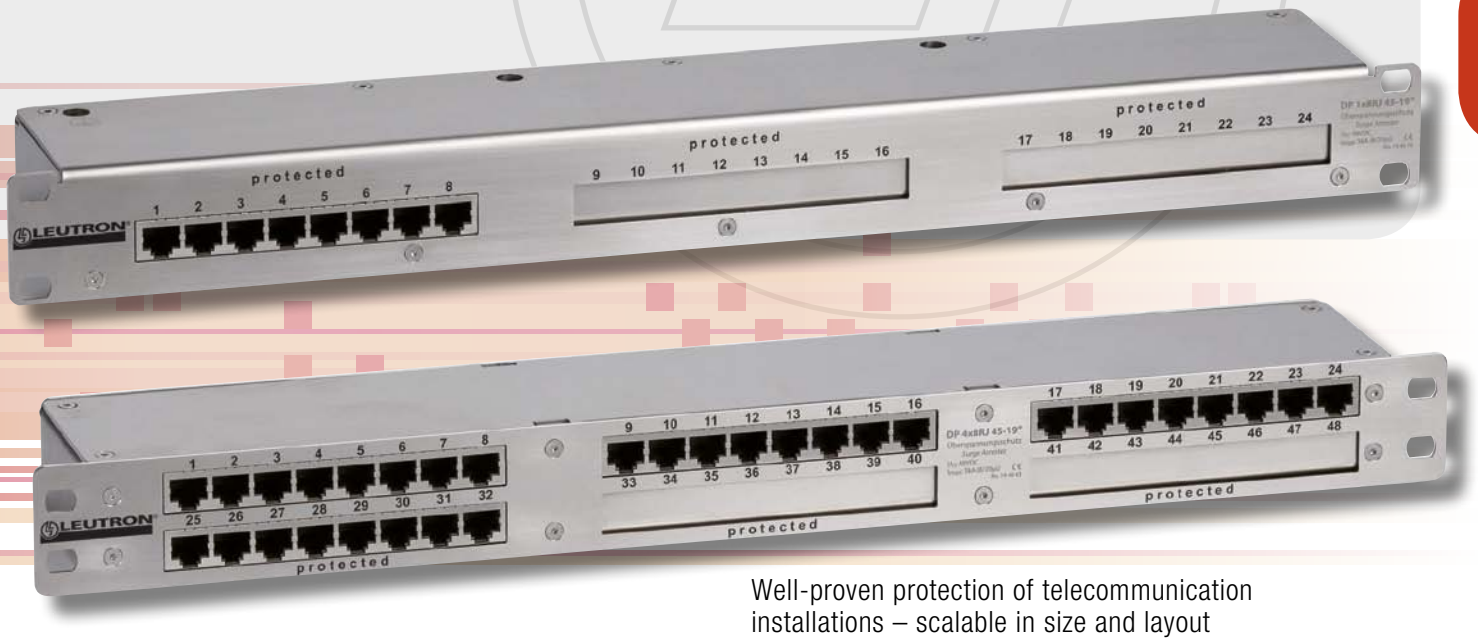
Leutron offers an optimum protection for the communication networks of its clients.





ENHANCED AVAILABILITY IN COMPLEX COMMUNICATION ENVIRONMENTS:

- All-purpose protection devices for all communication networks due to different interfaces and various bandwidths (up to 10 G Ethernet)
- The overvoltage is limited to non-hazardous values with protection levels adapted to the protection-needing equipment
- Plug-and-play units for IT installations improve the operational availability



Well-proven protection of telecommunication installations – scalable in size and layout

SURGE PROTECTION FOR INFORMATION TECHNOLOGY AND TELECOMMUNICATION INSTALLATIONS

PROTECTION OF DATA NETWORKS, E.G. ETHERNET AND LAN

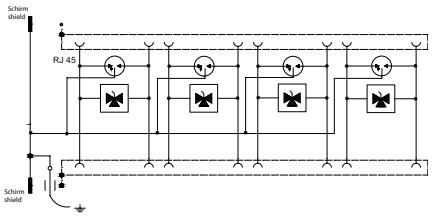
Cat. 6 / Class E application

DataPro RJ45-CAT6-48V-Tr

Compact surge protective module for the protection of data networks, and network devices such as hubs, switches, server. The adaptor plug style provides an easy application in cable ducts or directly at the terminal equipment.

- Suitable for Cat. 6 / class E applications (up to Gbit Ethernet)
- Applicable at the boundaries LPZ 0B - 2 and higher
- Test standards: IEC 61643-21 / EN 61643-21
- All 8 signal lines (4 pair of wires) are protected simultaneously
- RJ45 SPD for PoE (Power over Ethernet)
- Mounting on 35 mm DIN rail (EN 60715)
- EAC certification



Technical Data		
Product name		**DP RJ45-CAT6-48V-Tr**
Article-No.		24 00 05
IEC category		D1 / C2 / C1 / C3
Nominal voltage DC	UN	48 V=
Max. continuous operating voltage DC	Uc	48 V=
Operating current	IL	1 A
D1 lightning impulse current (10/350 µs)	Iimp	1kA
C2 nominal discharge current (8/20 µs) line-line	In	0,15 kA
C2 nominal discharge current (8/20 µs) total	Imax	10 kA
Protection level at In (line-line)	Up	150 V
Protection level at In (line-earth)	Up	550 V
Max. frequency	fG	250 MHz
Response time	tA	1 ns
Terminal input/output		RJ 45, shielded
Dimensions (L x W x H)		19 x 75 x 46 mm
Degree of protection (IEC EN 60529)		IP 20
Housing material		Metall

Cat. 5 /Class D application

DataPro RJ45-48V-Tr

Compact surge protective module for the protection of data networks, and network devices such as hubs, switches, server. The adaptor plug style provides an easy application in cable ducts or directly at the terminal equipment.

- Suitable for Cat. 5
- Compatible to 10Base T / 100Base T
- Applicable at the boundaries LPZ 1 - 2 and higher
- Test standards: IEC 61643-21 / EN 61643-21
- Mounting on 35 mm DIN rail (EN 60715)
- RJ45 SPD for PoE (Power over Ethernet)
- All 8 signal lines (4 pair of wires) are protected simultaneously.
- EAC certification

C2 nominal discharge current (8/20 µs)	In	5 kA
Protection level at 1kV/µs	Up	≤ 500 V
Protection level at In (8/20 µs)	Up	≤ 600 kV
Max. frequency	fG	≤ 100 MHz
Operating temperature range	TU	-40 - +80 °C
Terminal input/output		RJ 45, shielded
Degree of protection (IEC EN 60529)		IP 20
Dimension (DIN 43880)	TE	1 TE
Housing material		Polycarbonat UL94-V0/yellow

Cat. 5 /Class D application

DataPro RJ11/RJ12-Tr

Compact surge protective module for the protection of data networks, and network devices such as hubs, switches, server. The adaptor plug style provides an easy application in cable ducts or directly at the terminal equipment.

- Suitable for Cat. 5
- Compatible to 10Base T / 100Base T
- Applicable at the boundaries LPZ 1 - 2 and higher
- Test standards: IEC 61643-21 / EN 61643-21
- RJ11/RJ12 SPD for DIN rail mounting
- RJ11/RJ12 SPD for PoE (Power over Ethernet)
- All 6 signal lines (3 pair of wires) are protected simultaneously
- EAC certification

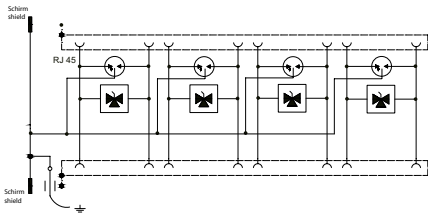
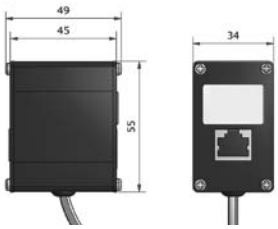
Cat. 5 /Class D application

DataPro-1xRJ45-PoE-Alu

Compact surge protective module for the protection of data networks, and network devices such as hubs, switches, server. The adaptor plug style provides an easy application in cable ducts or directly at the terminal equipment.

- Suitable for Cat. 5 / Class D
- Applicable at the boundaries LPZ 0B - 2 and higher.
- Test standards: IEC 61643-21 / EN 61643-21
- Compatible to 10Base T / 100Base T
- RJ45 SPD for PoE (Power over Ethernet)
- All 8 signal lines (4 pair of wires) are protected simultaneously.





Technical Data		
Product name		**DP 1xRJ45-PoE-Alu**
Article-No.		24 00 21
IEC category		C2 / C1 / C3
Nominal voltage DC	UN	48 V=
Max. continuous operating voltage DC	Uc	60 V=
Operating current	IL	650 mA
Nom. discharge current (8/20 µs) line-line	In	0,5 kA
Nom. discharge current (8/20 µs) line-earth	In	2,0 kA
Schutzpegel Ad-Ad at 1 kV/µs C3	Up	≤ 180 V
Schutzpegel Ad-Pg at 1 kV/µs C3	Up	≤ 600 V
Max. frequency	fG	≤ 100 MHz
Terminal input/output		RJ 45, shielded
Degree of protection (IEC EN 60529)		IP 20
Housing material		Metall

Cat. 5 /Class D application

DataPro 8xRJ45-6V-WG

Compact surge protective module in a wall housing for the protection of data networks and network devices such as hubs, switches, server and desktop computer.

example image

- Applicable at the boundaries LPZ 1 - 2 and higher
- RJ45 wall housing for 8 ports
- Suitable for Cat. 5 / Class D
- Compatible to 10Base T / 100Base T
- Test standards: IEC 61643-21 / EN 61643-21
- All 8 signal lines (4 pair of wires) are protected simultaneously.
- 6 Ports à 6 V DC/ 2 Ports à 48 V DC
- EAC certification

Cat. 5 /Class D application

DataPro x8RJ45-19“

example image

Compact surge protective module in 19“ housing with only 1 HE (45 mm) for the protection of data networks and network devices such as hubs, switches, server and desktop computer. Easy installation and wiring in all 19“ distribution and server racks possible.

- Applicable at the boundaries LPZ 1 - 2 and higher
- Fully shielded 19“ housing can be equipped with up to 24 RJ45 protection ports
- Suitable for Cat. 5 / Class D
- Compatible to 10Base T / 100Base T
- Test standards: IEC 61643-21 / EN 61643-21
- All 8 signal lines (4 pair of wires) are protected simultaneously.
- EAC certification

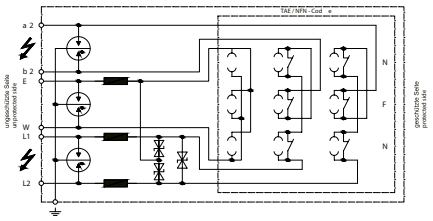
SPD for telecommunication networks

DataPro-TAE/NFN-aP

Surge protective device in a housing for surface mounting for the protection of analog telecommunication wires such as analog TAE or DSL interfaces.

- For analog telephone lines
- Fax, modem, answering machine
- Emergency dialling devices
- Applicable at the boundaries LPZ 0B - 2 and higher.
- TAE connector, code NFN
- Standard of the Deutsche Telekom
- Test standards: IEC 61643-21 / EN 61643-21
- 2-stage, (5-point) coarse and fine protective circuit
- EAC certification

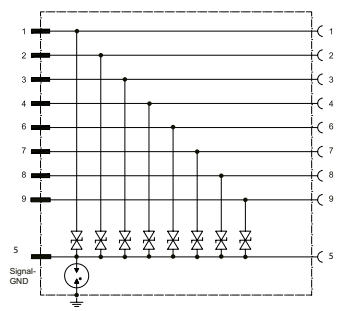


Technical Data		
Product name		**DataPro-TAE/NFN-aP**
Article-No.		24 00 04
IEC category		C2 / C1 / C3
Nominal voltage DC	UN	60 V=
Max. continuous operating voltage DC	Uc	185 V=
Nominal current	IL	1,5 A
C2 nominal discharge current (8/20 µs) total	Imax	5 kA
Protection level at In (line-line)	Up	≤ 300 V
Protection level at In (line-earth)	Up	≤ 450 V
Response time (linel-ine)/(line-earth)	tA	≤ 10 / ≤ 50 ns
Max. frequency (-3 dB)	fG	1,5 MHz
Resistance per path	R	1 Ω
Operating temperature range	TU	-40 - +80 °C
Type of connection		Screw-type terminal/TAE
Degree of protection (IEC EN 60529)		IP 20

DataPro RS

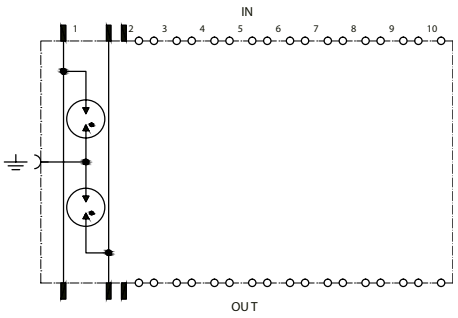
Surge voltage arrester for serial interfaces RS232/RS422/RS485.
The multi pole surge protective plug adapter make serial interfaces of computers or controll systems secure of transient overvoltages.

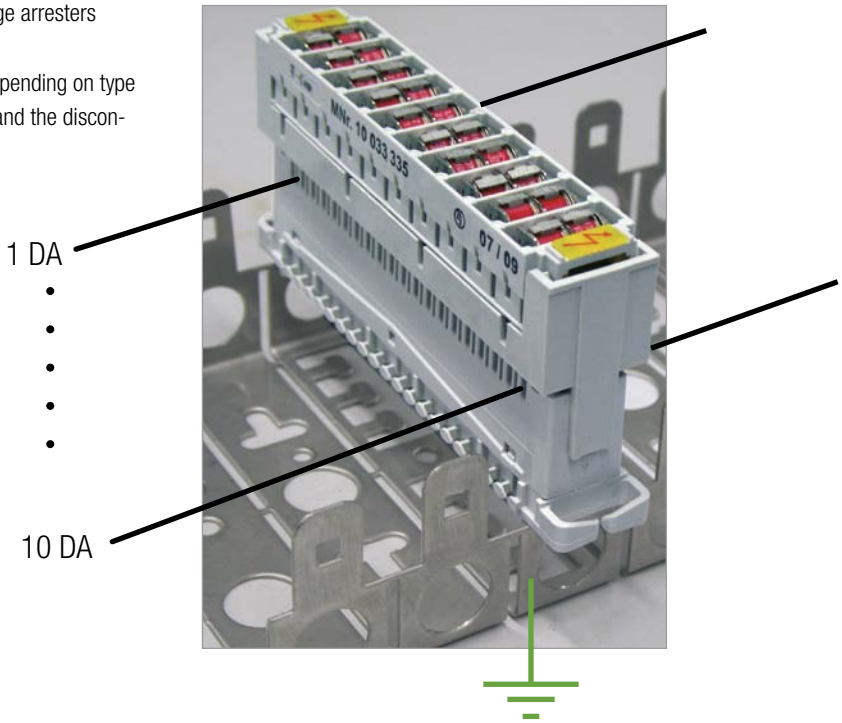
- Pluggable surge voltage fine protection
- Protection against transverse surges as well as longitudinal surges
- Very fast response time
- Protection of all active pins
- Easy installation as adapter plug/socket
- Suitable for retrofitting
- Integrated earthing conductor
- EAC certification



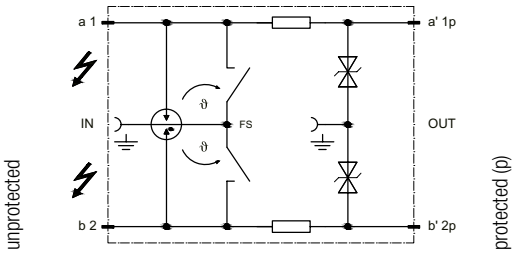
Technical Data		
Product name		**DP RS 232/422/485-9P**
Article-No.		24 00 60
Nominal voltage DC	UN	15 V=
Max. continuous operating voltage DC	Uc	17 V=
C2 nominal discharge current (8/20 µs) line-line	In	0,5 kA
C2 Nennableitstoßstrom Line-Erde	In	5 kA
Protection level at In (line-line)	Up	≤ 880 V
Protection level at In (line-earth)	Up	≤ 44 V
Response time line-line or line-GND	tA	<1 ns
Response time line-PE or GND-PE	tA	<100 ns
Max. transmission frequency	fG	13 MHz
Max. transmission rate	Vs	10 Mbit/s
Protected lines		9
Cross section of earthing conductor		2.5 mm²
Operating temperature range	TU	-40 - +80 °C
Type of connection		D SUB 9
Enclosure material / colour		ABS
Degree of protection (IEC EN 60529)		IP 20
Dimensions (L x W x H)		53 x 33 x 16 mm

- LSA surge voltage magazines with 10 or 20 gas-filled surge arresters (coarse protection)
- Applicable at the LPZ transition point 0A -1 and higher, depending on type
- The magazines can be connected to both the connection and the disconnection module





- Surge voltage protection connector (coarse and fine protection) DP 1LSA or DP 10LSA to equip the LSA disconnection module (white) of the construction form 2.
- Applicable at the LPZ transition point 0A - 1 and higher, depending on type
- The surge voltage protection connectors are only pluggable to the disconnection module.
- Earthing by a grounding bar, which is connected to the backmount frame via the disconnection module.



example: DP 1LSA-12

MTH/MTL-Serie

example image

The surge protection magazines of series MTH and MTL are fitted with high quality gas discharge tubes. The are avaibable in variations of 90 Volt ac and 230 Volt ac executions.
They are designed specially for HVT 71 application of Siemens main distribution in telecom and datat line systems. The integrated fail-safe behaviour protects against dangerous ac influences.

- Magazines are fitted with 10 gas-filled surge arrester (GDT) each
- Stable performance, long service life
- Impulse current resistance 10 kA or 20 kA per line
- For five double lines

DataPro 1LSA

Surge voltage protective module for one pair of wires for measuring and control systems, in LSA (IDC) disconnection modules. The protective module provides coarse and fine protection in LSA systems (construction form 2). Surge voltage protection connector for 1DA, with fail-safe contact.

example image

- Versions for various voltage levels
- Two-step, coarse and fine protection
- Fail-safe thermal overload protection

DataPro 1LSA-TK180FS

Lightning and surge protection for telephone installations. Pluggable module for LSA (IDC) disconnection modules.
Surge voltage protection connector for 1 DA with fail-safe contact (only coarse protection) for analogue, ISDN and ADSL lines.

- self-extinguishing thermoplastic (POCAN) UL 94 V0, grey
- Earthing by a grounding bar, which is connected to the backmount frame via the disconnection module.

SPD according to test category C2+C1

DataPro 10LSA-PTC

Pluggable surge voltage protection modules for 10-wire pairs for LSA (IDC) disconnection modules.

example image

- Surge voltage protection against longitudinal and transverse voltages
- Protection for up to ten pair of wires (DA)
- High transmission rate in range of MHz
- Coarse and fine protection (high speed TVS-diodes) for measuring and control systems

Accessories for LSA Technology

LSA disconnection module

Each module can hold 10 DA at the cable and allocation side. To be equipped with surge voltage protection connectors (coarse and fine protection) DP 1LSA or DP 10LSA. Applicable at the LPZ transition point 1-2 and higher. The disconnection module is white.

Technical Data		
Product name		**LSA 2/10-TR**
Article-No.		24 01 02
Withstand voltage		2 kV
Volume resistance		< 10 mΩ
Conductor diameter		0,4 -0,8 mm
Insulation resistance	Risol	10 GΩ
External diameter of insulation		0,7-1,5 mm
Net weight / pc		55 g

LSA connection module

Each module can hold 10 DA at the cable and allocation side for a permanent connection. LSA magazines filled with gas-filled surge arresters can be plugged in. The connection module is grey.

Technical Data		
Product name		**LSA 2/10-AN**
Article-No.		24 01 00
Withstand voltage		2 kV
Volume resistance		< 10 mΩ
Conductor diameter, solid wire		0,4-0,8 AWG 26-20 mm
Insulation resistance	Risol	5x 10.000 MΩ
External diameter of insulation		0,7-1,5 mm
Net weight / pc		50 g

- Corresponds with IEC 60352-4 and DIN 41611-6
- Wiring with two wires of same diameter is possible
- Amply dimensioned elastic arrangement of the wiring

Further LSA parts

LSA 2/10-ER38-rot (Art.-No. 24 01 04)
LSA Ground Module to connect 38 earthing connectors and shields.

LSA 2/10-ES (Art.-No. 24 01 33)
Grounding rail, for 10 DA connection modules serving as connection between LSA backmount frame and 1 DA surge voltage (+surge current) - protection connector

LSA 2/10 KS-120 (Art.-No. 24 01 36)
LSA edge protection profile for backmount frame (plastic)

LSA 2/10 KSR (Art.-No. 24 01 08)
LSA 2/10 hinged label holder (plastic)

LSA 2/10-MW10-25/22 (Art.-No. 24 01 10)
LSA backmount frame 10 x 10DA (modular) stainless metal. Plug space for 10 pcs of LSA 2/10 10DA connection modules (∑ 100 DA) 25 mm grid / depth 22 mm, easily detachable upon individual requirements, available up to a size of 78 connection modules.

LSA DIN ADAPT (Art.-No. 24 01 37)
LSA 2/10 DIN rail adapter. Adapter metal line with M5 screw thread (without screw). Used to fix backmount frame or connection modules onto 35 mm DIN rails.

LSA 2/10 AD (Art.-No. 24 01 09)
Magazine cover for protection against dust and unwanted contact; tranparent

EVERYTHING FOR THE PROTECTION OF TRANSMISSION AND RECEIVING SYSTEMS

Due to an expansion of its product range Leutron now offers devices that cover all established interfaces and frequency ranges. Transmitting and receiving systems with broadband and narrowband signals up to 6 GHz as well as base stations for mobile communications and broadcasting systems can be protected. The protective devices combine a very low protection level with an optimum transmission of the wanted signal.

Special solutions for uncommon interfaces are available on request.

FAULT-FREE TRANSMITTING AND RECEIVING OPERATION:

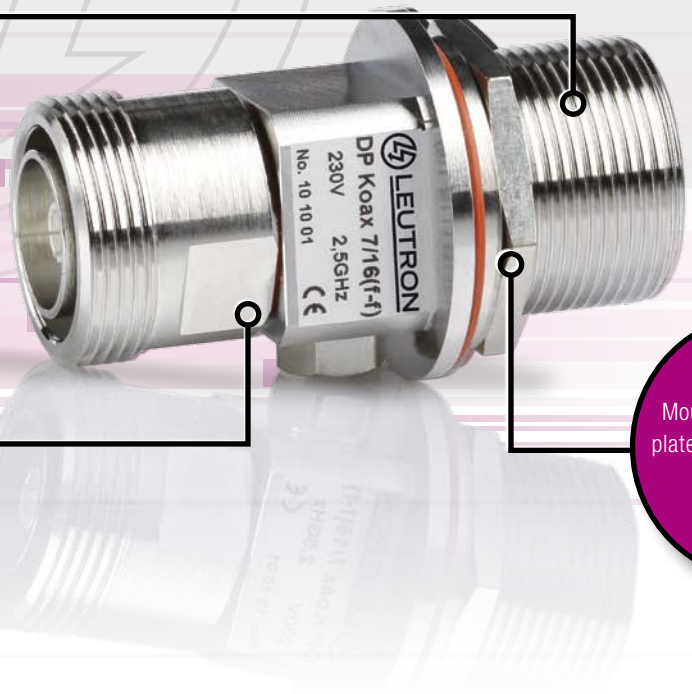
- Protective devices with gas-filled surge protectors, impedance-adjusted for frequency ranges up to 6 GHz – simultaneous transmission of a DC supply voltage possible

SURGE PROTECTION FOR COAXIAL INTERFACES

Versions for different interfaces:

- BNC connectors
- FME connectors
- SMA connectors
- N connectors
- DIN 7/16 connectors

Protection for different voltage levels



Versions up to 6 GHz available

Mounting on mounting plate or as adapter plug/ socket

SURGE PROTECTION FOR TRANSMITTING AND RECEIVING SYSTEMS

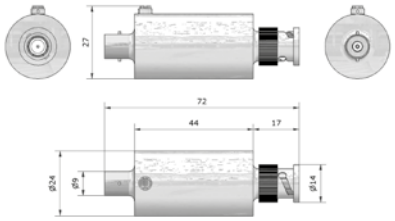
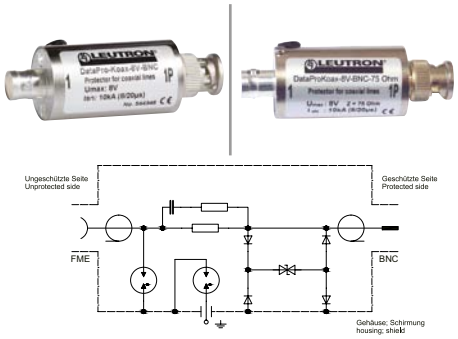
DataPro Koax-8V-BNC

Lightning and surge protection for coaxial signal lines with BNC connector for the use at the building entry.

example image

- High performance surge protector
- Applicable at the building entry at the boudaries LPZ 0A-1 and higher
- For video surveillance cameras
- Connector according to IEC 61169-8
- Grounding via connected earthing wire 0.75 mm², L=ca.30 mm
- Test standard: IEC 61643-21 / EN 61643-21





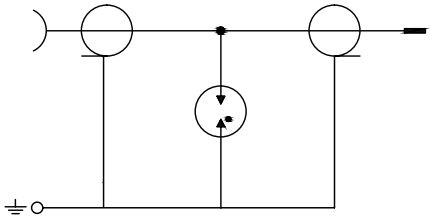
Technical Data

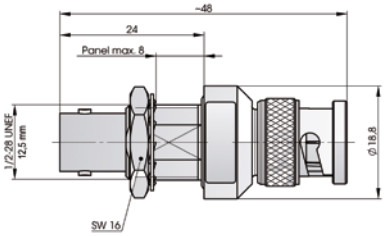
Product name		**DataPro Koax-8V-BNC**	**DataPro Koax-8V-BNC-75 Ohm**
Article-No.		54 43 46	54 43 40
IEC category		D1 / C2 / C1 / C3	D1 / C2 / C1 / C3
Max. continuous operating voltage DC	Uc	8 V=	8 V=
Max. power		0,7 W	0,7 W
Longitudinal impedance (DC resistance) per wire	Z	10 Ω	10 Ω
Surge impedance		50 Ω	75 Ω
Response time fine protection	tA	≤ 2 ns	≤ 2 ns
C2 nominal discharge current (8/20 µs)	In	5 kA	5 kA
Max. impulse discharge current (8/20 µs)	Imax	10 kA	10 kA
D1 lightning impulse current (10/350 µs)	Iimp	1 kA	1 kA
C2 protection level line-shield at In	Up	≤ 20 V	≤ 20 V
C3 protection level line-shield at 1kV/µs	Up	≤ 13 V	≤ 13 V
C3 protection level line-shield-PE at (1kV/µs)	Up	≤ 600 V	≤ 600 V
Frequency range	fO	0 - 60 MHz	0 - 60 MHz
Return loss	RL	bei 40 kHZ: > 20 dB	
Operating temperature range	TU	- 25 - +85 °C	-25 - +85 °C
Degree of protection (IEC EN 60529)		IP 20	IP 20
Plug connector		BNC (m/f)	BNC (m/f)

DataPro Koax BNC

Surge protection device for coaxial signal lines with BNC connectors and very high frequencies. The discharge current arrester can be mounted in and earthed in a mounting plate.

- Surge protection device for extremly high freqeuncies up to 6 GHz
- Applicable at the boundaries LPZ 0B - 1 and higher
- Connector according to IEC 61169-8
- Earthing via metal housing
- Test standard: IEC 61643-21 / EN 61643-21



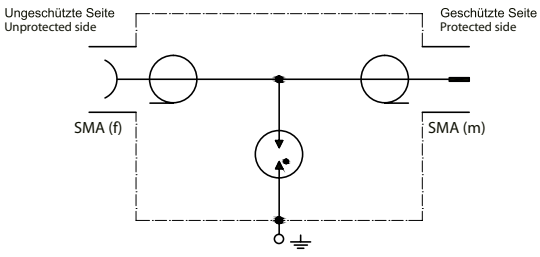


Technical Data		
Product name		**DP Koax BNC 500hm**
Article-No.		54 43 30
IEC category		C2 / C1 / C3
Surge impedance	Z	50 Ω
Frequency range	fO	0 - 6000 MHz
Return loss	RL	≥ 20 dB
Breakdown voltage (100V/s)		150 - 250 V
C2 nominal discharge current (8/20 µs)	In	5 kA
Max. impulse discharge current (8/20 µs)	Imax	10 kA
Max. transmission capacity		25 W
Operating temperature range	TU	-40 - +85 °C
Degree of protection (IEC EN 60529)		IP 67
Plug connector		BNC (m/f)

DataPro-SMA-m/f

Lightning protection for HF systems/ DC power systems with SMA connectors

- High performance surge protector
- Small designed
- Maximal operating voltage of 10 V DC
- Frequency range: DC - 4 GHz



Technical Data		
Product name		**DP-SMA-m/f**
Article-No.		54 43 57
IEC category		C2 / C1
Max. continuous operating voltage DC	Uc	10 V=
Lightning impulse current (10/350 µs)	Iimp	5 kA
C2 nominal discharge current (8/20 µs)	In	20 kA
Protection level (line-earth)	Up	< 650 V
Max. power transfer	Pmax	25 W
Frequency range	fO	0-4000 MHz
Insertion loss	fE	0,2 dB
Surge impedance	Z	50 Ω
Operating temperature range	TU	-40 - +80 °C
Plug connector		SMA (m/f)
Enclosure material / colour		brass CuZnSN

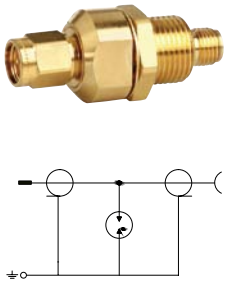
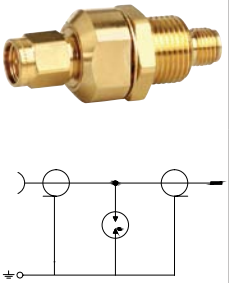
AntPro 5,8GHz-SMA / DataPro FME-AD

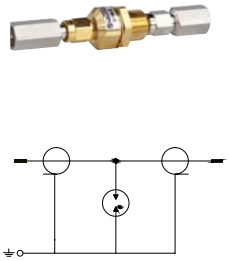
example image

Surge protection device for coaxial signal lines with SMA connectors. The very high frequency range of up to 6 GHz enables the use in wireless LAN and similar applications. The discharge current arrester can be mounted in and earthed in a mounting plate.
DP FMA-AD: Surge voltage protection for sensitive GSM modems with FME antenna connector. The set contains an dischrage current arrester with SMA connector and a freqeuncy range up to 6 GHz and adapters for FME connectors.

- Surge protection device for extremly high freqeuncies up to 6 GHz
- Applicable at the boundaries LPZ 0B - 1 and higher
- Connector according to IEC 61169-8
- Earthing via metal housing
- Test standard: IEC 61643-21 / EN 61643-21
- Mounting with angle bracket or in mounting plate possible
- Second version with inverse polarity (inner conductor is socket instead of plug)







Technical Data

Product name		**AntPro 5,8GHz-SMA**	**AntPro 5,8GHz-R-SMA**	**DP FME-AD**
Article-No.		04 58 00	04 58 02	16 05 20
IEC category		C1 / C2 / C3	C1 / C2 / C3	C1 / C2 / C3

Plug connector		SMA (m/f)	R-SMA (f/m)	FME (m/m)

AntPro Koax-GSM-N/230

AntPro Koax-GSM-N was designed for the coarse protection of highly sensitive electronical HF amplifiers, e.g., for GSM aerial systems with GSM aerial cable RG213/U (max. 180 W at max. 1 GHz, Ø 10.5 mm).

example image

- High performance surge arrester for broadband applications with frequency ranges from DC up to 2.5 GHz
- Applicable at the boundaries LPZ 0B - 1 and higher
- Connector according to IEC 61169-8
- Test standard: IEC 61643-21 / EN 61643-21
- The f/f version can be mounted in a mounting plate or with an angle bracket.
- With holder „MW-AntPro“ (metall) - see below

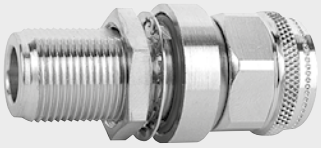
AntPro 6GHz-N



example image

The devices are medium sized, precision, weatherproof connectors supplied with a screw coupling. Speciell design techniques for this series of connectors have resulted in excellent levels of performance with regard go return loss (VSWR) and intermodulation disortion.

- N surge suppressor male (m)-male (m) with gas discharge arrester
- N surge supressor male (m)-female (f) with gas discharge arrester
- Recommended coupling torque: 4-6 Nm

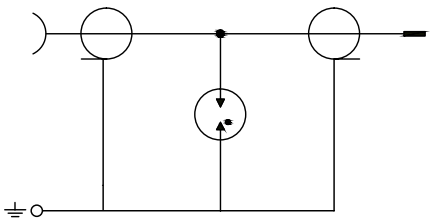
DataPro-SAT-F

Gas-filled surge arrester (GDT) for the protection of radio and TV reception equipment. DP-SAT-F-5 ... 2500MHz should be screwed directly to each input of a multi-switch or directly to each LNB output. A gas discharge tube (GDT) works inside. If the static voltage between core and screen exceeds approximately 80 volts, a short circuit occurs in the GDT and conducts surge currents of up to 8,000 amps to earth. Once the overvoltage is over, the GDT switches back to protection.

- High performance antenna protection
- Connections: F-plug / F-socket
- Suitable for outdoor use: F connector with sealing ring
- DC pass for remote supply
- Shielding level: 100 dB (depending on frequency)
- Easy installation



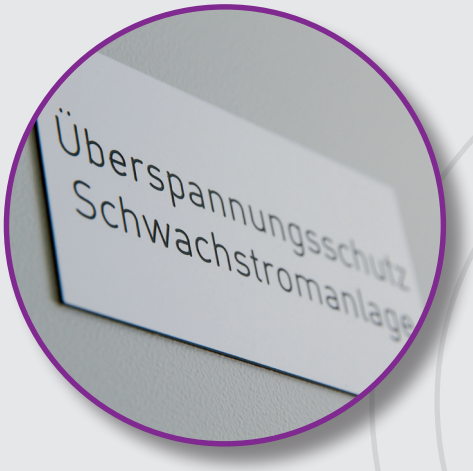
Technical Data		
Product name		**DP-SAT-F-5...2500MHz**
Article-No.		21 00 10
IEC category		D1 / C2
Nominal voltage DC	UN	60 V=
Max. permissible rated direct voltage	Uc	75 V=
Nominal current	IL	0,5 A
D1 lightning impulse current (10/350 µs)	Iimp	2,5 kA
C2 Nominal impulse discharge current (8/20 µs)	Imax	8 kA
Protection level at Iimp (10/350 µs)	Up	≤ 0,6 kV
Protection level at In (8/20 µs)	Up	≤ 0,6 kV
Max. impulse sparkover voltage	Uas	90 ±20% V
Impulse sparkover voltage core-shield (1 kV/µs)	Uas	≤ 600 V
Surge impedance	Z	75 Ω
Insertion loss	fE	< 0,3 dB
Frequency range	f0	5...2500 MHz
Insulation resistance	Risol	10 GΩ
Response time	tA	≤ 100 ns
Operating temperature range	TU	-40 - +80 °C
Type of connection		F75/F75 (Socket / plug)
Locking torque		0,6 Nm
Enclosure material		Nickel-plated brass
Dimension (Ø x L)		14 x 40 mm

Accessories for DataPro SAT-F	
	DP-SAT-EB5
Article-No.	17 01 80

Earthing (grounding) block for five pieces DP-SAT-F-5 ... 2500MHz. Solid, stable 5 F grounding block for the proper grounding of antenna systems. Excellent electrical properties ensure almost loss-free transmission and minimal reflections. Large assembly-friendly distance from socket to socket.

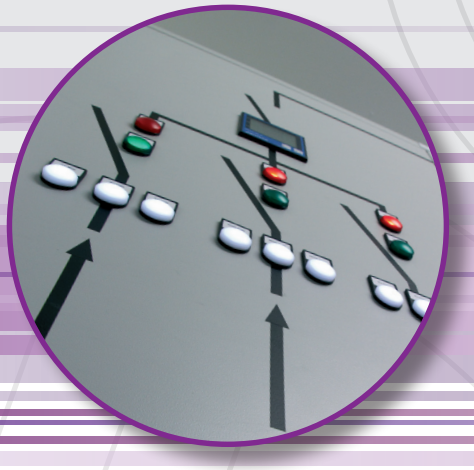
- Connections 2 x 5 F sockets
- 4 x earthing connections up to 10 mm²

FILTER WITH INTEGRATED SURGE PROTECTION



For protection against overvoltages and harmonics Leutron offers EMC filters which are combined with a surge protection. These devices suppress harmonics and transient surges, hence, allowing equipment to operate smoothly even in high-interference environments. With the enhancement of its product range Leutron now offers protective devices for the area of measuring systems and automatic control, thus covering the complete field of industrial applications.

Leutron guarantees reliable signals due to EMC filters.



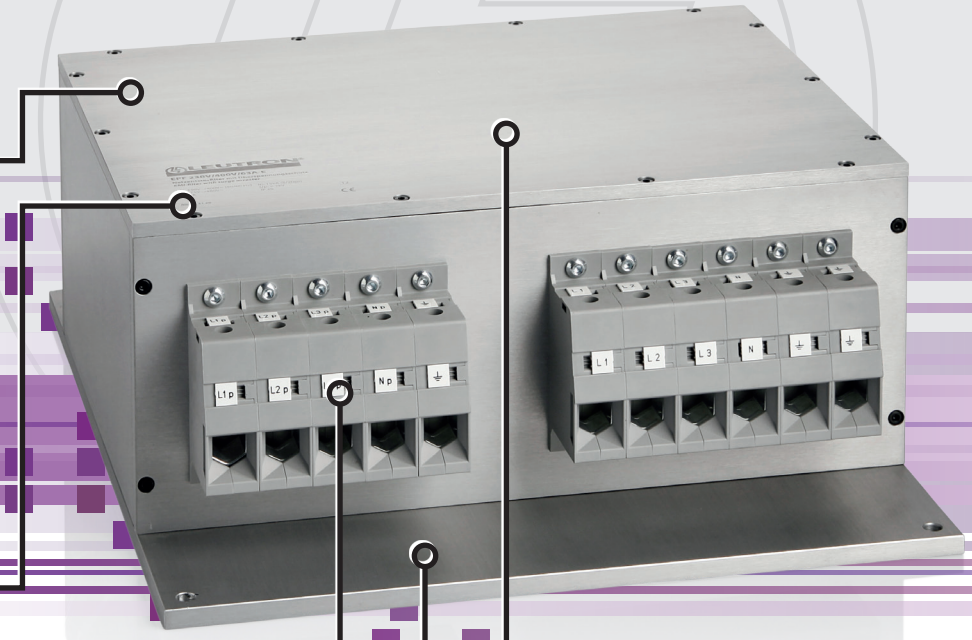
EMC FILTERS COMBINED WITH HARMONIZED SURGE PROTECTION:

- Protection against transient overvoltages and harmonics
- Leakage-current free
- Low residual voltages mean reduced stress for the system to be protected
- Outstanding differential-mode and common-mode damping of the filters

The EMC filters convince with their compact construction and the optimally harmonised protection components filter and surge protection.

EMC FILTERS WITH INTEGRATED SURGE PROTECTION

FILTERS WITH INTEGRATED SURGE PROTECTION UP TO 200 A



Robust and shielded design

Versions up to a nominal current of 200 A available

For one phase and three phase mains supplies

Harmonics filter, combined with surge protection

EAC Certification

FILTERS WITH INTEGRATED SURGE PROTECTION FOR MEASURING AND CONTROL EQUIPMENT

EnerPro Filter for mounting rail

EMC filters with integrated overvoltage protection enable smooth operation of highly sensitive electronics in harsh environments.
Suitable for the application in single-phase TN systems. The protective circuit with filter contains an optimal decoupling between its medium protection (varistors) and its fine protection (varistors).

example image

- Applicable at the boundaries LPZ 0B - 2 and higher
- All leakage current-afflicted elements are galvanically isolated from earth by a gas-filled surge arrester (GDT)
- Test standard: IEC 61643-11 / EN 61643-11
- Remote signalling contact (FM): break contact
- EAC Certification

Recommended conductor cross section		25 mm²	25 mm²
Max. connection torque for terminals		4,0 Nm	4,0 Nm
Enclosure material / colour		Polycarbonate UL 94-V0 / yellow	Polycarbonate UL 94-V0 / yellow
Degree of protection (IEC EN 60529)		IP 20	IP 20
Mounting on		35 mm DIN rail (EN 60715)	35 mm DIN rail (EN 60715)
Installation dimensions (H × W × D)		105 x 90 x 64 mm	105 x 90 x 64 mm

EnerPro Filter up to 35A, 2 pole

EMC filters with integrated overvoltage protection enable smooth operation of highly sensitive electronics in harsh environments. Suitable for the application in single-phase TN systems. The low-pass filter eliminates high-frequency electromagnetic interferences caused by lightning or switching actions in the network.

example image

- Applicable at the boundaries LPZ 0B - 2 and higher

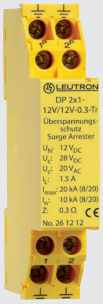
DataPro 2x1 0,3Ohm-Tr

EMC filter for data and signal lines combined with surge protection enables smooth operation of sensitive electronic equipment in rough environment. Lightning current and surge voltage protection for particularly long signal and bus lines. Thanks to the extremely low volume resistance (impedance only 0.3 Ω) no noteworthy signal losses occur. It is a combined arrester to protect two single wires.



example image

- Signal and data line protection with low-pass filter
- Very low volume resistance of 0,3 Ohm
- Protective circuit for 2 signal lines with common ground
- Applicable at the LPZ transition point 0A - 2 and higher
- Mounting on 35 mm DIN rail (EN 60715)
- Degree of protection nach IEC EN 60529: IP 20
- Space required for installation: 17.5 mm
- Inflammability class according to UL 94 V0
- EAC Certification

DataPro2x1-RLC/50V-Tr

EMC filter for data and signal lines combined with surge protection enables smooth operation of sensitive electronic equipment in rough environment. Protection of anode side measuring circuit for rectifier in cathodic protection systems (CCPS). Protection of DC-measuring lines up to 50 V DC. Surge voltage protector for electronical equipment with an operating voltage of up to 50 V DC, with an impulse current withstand strength of 30 kA (8/20 µs). The devices was designed to protect sensitive electronic equipment.

- Signal and data line protection with low-pass filter
- Protective circuit for 2 signal lines without reference to ground potential
- EAC Certification
- Applicable at the boundaries LPZ 0A - 2 and higher
- Mounting on 35 mm DIN rail (EN 60715)
- Space required for installation: 17.5 mm
- Leakage current-free

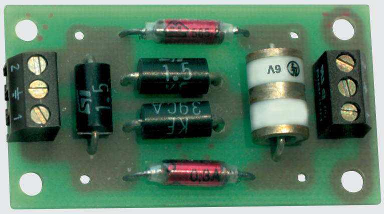
DataPro Z

To protect data and signal lines at measuring systems, automatic control devices and telecom instal-lations. It is a compact protective circuit on a single printed circuit board (52 x 29 mm) which has been designed for the surge protection of sensitive electronic equipment.
The DataPro Z is designed as a two-step coarse and fine protective circuit. The coarse protection is provided by a gas-filled surge arrester (GDT) and the fine protection by EMI filter and suppressor diodes. Due to the absence of varistors, no leakage currents occur. Hence, there is no need of remote supervision respectively periodic inspection.



example image

- Compact construction
- All-purpose application
- Nominal current up to 300 mA
- Many voltage variation
- High discharge capacity (line-earth: 20 kA at 8/20 µs)
- Maintenance-free
- Budget-priced solution
- EAC Certification

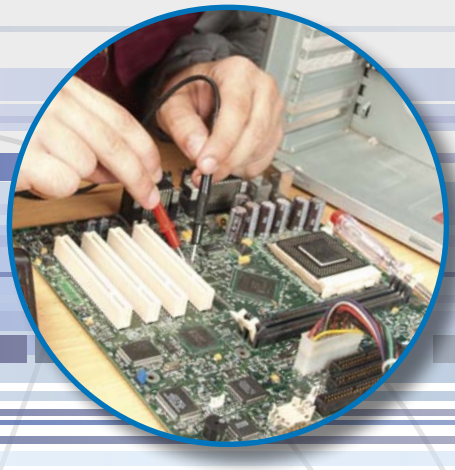
SMOOTH OPERATION GUARANTEED

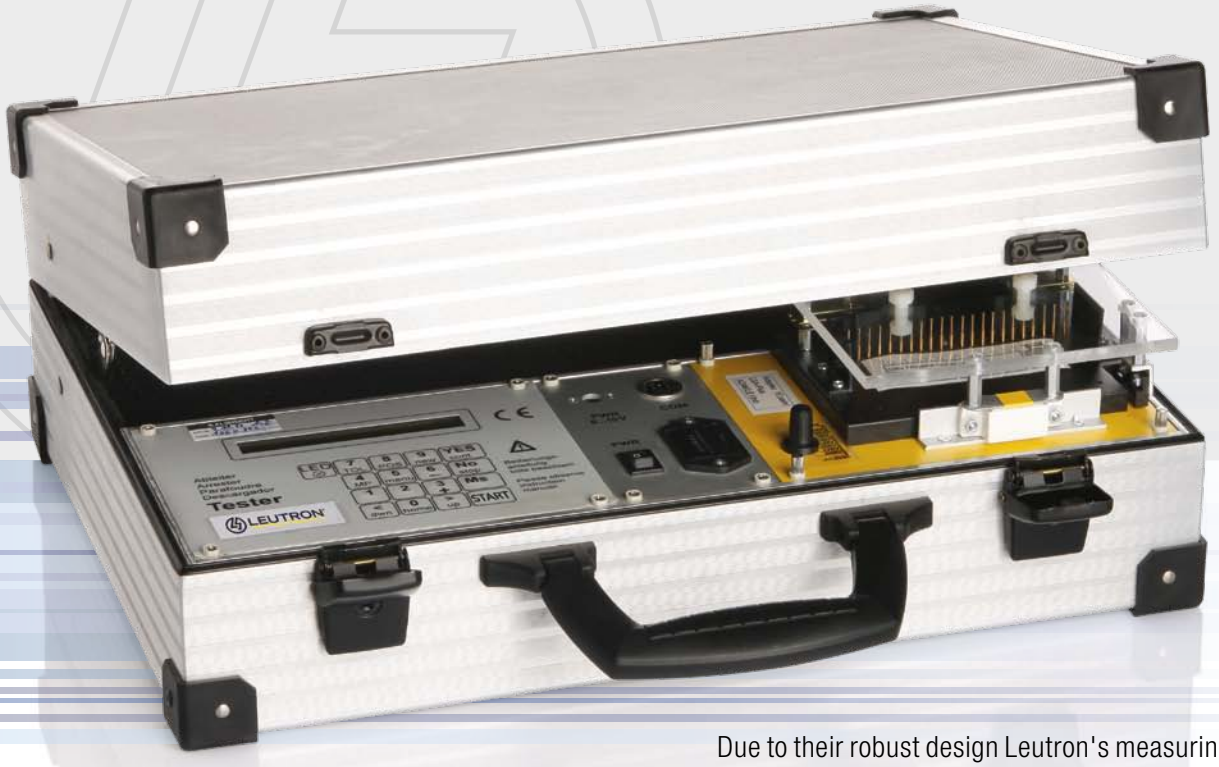
The measuring and testing devices are applied to check the sparkover voltage of lightning or surge protectors. These periodical tests of the protective function are demanded by the standards to ensure a steady and error-free operation.

Down-time caused by overload of the surge protection can be eliminated by periodical reviews – with measuring and testing devices from Leutron.



TESTED FOR SAFETY – MANUALLY OR AUTOMATICALLY:

- Manual measurement with the arrester tester, the varistor tester or the combined tester
- Fully automatic measurement with the portable test equipment for SSCT magazines
- Available adaptors for all types of gas-filled surge protectors



Due to their robust design Leutron's measuring and testing devices are perfectly suited for regular mobile use.

MONITORING

PORTABLE TEST EQUIPMENT FOR SSCT (LSA) MAGAZINES

Variable adapters for different types of magazines

Fully automated test of SSCT (LSA) magazines for overvoltage protection

PC interface for remote control and data archiving

Robust and mobile set-up in an easy to handle aluminium case

COMBINED TESTER

- To test the sparkover voltage of lightning or surge protectors, e.g. MOV and gas discharge tubes

Function tester for GDT and GDT based spark-gaps

H35, H45, H65

- Digital measuring instrument with large LCD display
- 9V battery operation or net work power unit
- Measuring adapter (optional) for all popular GDT
- Automatic fixing of indicated value
- Scope of delivery includes: 1 carrying case, 1 test leads (2 pieces 1m each), 2 test terminals, 1 external power supply 230V

H35 Function tester for GDT and GDT based spark-gaps

For the testing of spark over voltage of lightning and surge voltage arresters based on expulsion-type spark gap. Mobile, easy-to-handle digital meter with a large LCD display for maintenance.

H45 Function tester for MOV and overvoltage protection diodes.

For testing of the spark-over voltage of lightning- and surge voltage arresters. Digital measuring device with large LCD display. Mobile and easy-to-handle, usable for the service area.

H65 Universal function tester for GDT, MOV and diodes as well as mixed circuits

For the testing of spark over voltage of lightning and surge voltage arresters, e.g. metal oxide varistors (MOV) and gas-filled surge arrester (GDT) or individually MOV and GDT. It is a mobile, easy-to-handle and microprocessor operated digital meter with a large LCD display for maintenance.

Portable test equipment for GDT in LSA magazines

A46

- PC connection
- Individual tester can be stored in a PC or printed via included software
- Other test adapters are available on request
- Mobile device in aluminium protection case

For testing of LSA arrester magazines equipped with GDT. The whole test equipment is fixed in a portable case with place for a lot of accessories (e.g. AC- adapter, test adapter for different kind of GDT magazines).
At each test cycle each GDT arrester inserted in a magazine, the spark-over voltage in both polarities is analysed and compared with the tolerance values, adjusted in the test program.

For the testing of GDT equipped LSA magazines. The test equipment is embedded in a metal case which has additional space for accessories like network adapters and test adapters for different arrester magazines.

Each GDT in the magazine is tested on both polarities, and the static dc sparkover voltage is compared with the tolerance values.

The A46 allows for an accurate measuring of the dc sparkover voltage, by detecting the first sparkover with a linear ramp. It is important to measure on both polarities in order to prevent damages to the gas-filled surge arrester.

The whole testing of the magazine takes place automatically, including the comparison of the measured values with the tolerance values and the fault detection. The test of a complete magazine filled with 20 GDTs takes about 13 seconds.

A quality assessment system can be set up with the software PRO-TEST.

The A46 can operate entirely remote controlled from a PC via its serial interface. A special optocoupler-based cable is necessary to provide an interference protection for the PC.

MC6000

Introduction
The MC6000 arrester tester is designed to measure:

1) the static break down voltage of gas discharge tubes
2) the 1mA-voltage of varistors, Z and TAZ diodes.

The tester automatically detects whether a varistor or a gas tube is connected.

Operating principle
The tester generates a saw tooth voltage with a rise time of 8s. If the current through the test device exceeds 1 mA the voltage value is stored and displayed with the indicator „Varistor - Diode“. The ramp voltage drops to zero.

A small capacitor is connected parallel to the ramp voltage and acts as a low impedance to force a starting glow discharge of a gas tube into break down. The current exceeds 1 A for less than 1µs, is detected and displayed as „Gas Tube“ together with the voltage value. The ramp drops to zero.

The tester is operating from a lead acid battery: 12 V - 4.5 Ah. The power consumption is 0.12 A in standby - going up to 1.2 A when testing a 6 kV varistor at 1 mA. So battery time depends on the kind of measurements made. 5h to 8h continuous operation should be possible.

The tester has an internal charger. The mains input (L, N, PE) is highly isolated from the tester circuit - 5 kV AC - so the charger may be running during tests. Normal charging current is 0.22 A, automatically decreasing to zero if the battery is above 13.5 V.

Electrical safety considerations
The MC6000-tester generates high voltages and charges internal capacitors. Even if the tester is switched off when the output current exceeds 1 mA, the capacitor delivers pulse current (< 1µs; > 1 A) . In the lower range the stored energy is < 0.7 J and considered as safe. In the high range the stored energy is < 0.45 J and dangerous.

The following rules must be obeyed:

1) the test device must be free and not connected to any other circuitry.
2) the test leads and clamps must be securely fastened to the test device - an adaptor is highly recommended. It is not allowed to hold or handle the test device during the test.
3) The test device must be placed on an isolating sheet like Teflon, silicon rubber, glas.
A 6 kV a wooden desk top is not sufficient.

Display detail shots

Mobile Surge Generator M10

Surges are caused by direct or indirect lightning strokes into an electric circuit or transient overvoltages due to short-circuits or switching operations of inductive loads. This leads to currents or electromagnetic fields which generate strong voltage or current transients. Over-voltages and currents can reach several thousand volt and several thousand ampere.

The mobile and easy to transport surge generator is perfectly suited for application at customer trainings and presentations as well as life-demonstrations and fast and simple tests of gas-filled surge arresters and surge arresters with isolating spark gaps and varistors.

Due to its robust flightcase with a heavy-duty pull-out handle, two casters and two recessed flip handles the mobile surge generator is perfectly protected and easy to transport.

- Easy and safe to operate with remote triggering via cable
- Compact and lightweight design with all functions aboard

The device is especially suitable to underline your presentation with the right sound effect.

Technical data of the case

External dimensions approx.:	(W x D x H) 550 x 354 x 270 mm
Internal dimensions incl. top:	(W x D x H) 476 x 280 x 196 mm
Volume:	26 litre
Weight of the case:	11 kg
Total weight:	38 kg
Panel material:	7 mm birch plywood with black PVC coating, 20 mm aluminium edge linings
Base frame height outside:	approx. 145 mm
Demountable hood	

Equipment

2x recessed flip handle, half height
2x rubber pads 38 x 30 mm
1x pull-out handle, steel, heavy duty
1x pair casters with a diameter of 75 mm; load approx. 80 kg/pair
2x slide foot for 75 mm rolls
4x medial, recessed butterfly latches (on request lockable)
Small stackable ball corners
Inner surfaces coated with 20 mm thick foamed material
Height of the lower part 120 mm

Order data	
Product name	M10 Stoßstromgenerator
Article No.	87 01 10

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

Technical data of the surge generator

1.	Charging voltage:	10 kV
2.	Stored energy E:	500 J
3.	Charge Q:	0.1 As
4.	Pulse shape:	5/15 µs
5.	Peake current:	8 kA
6.	Remote triggering via cable	
7.	Ignition of the isolating spark gap is visible through a glass tube	

Suited for the testing of gas discharge tubes (GDT), isolating spark gaps and varistors.

Shipment includes:

- Power supply cable 1.5 m
- Lock and key

Quick reference guide for mobile surge generators

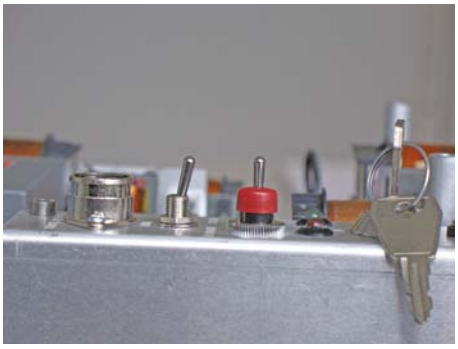
1. Connect the specimen via the cables
2. Red connector: ground
3. Blue connector: voltage
   Warning: The mobile surge generator must not be switched on if no specimen is connected!
4. The LOCAL switch points downwards. This is valid for manual operation without REMOTE CONTROL.
5. Insert power cable and connect to mains.
6. Switch the device on with the key. Turn the key clockwise to ON.
7. Charge: Switch the toggle switch CHARGE to the right. Charging takes approx. 10 seconds. The green LED is lit when the charging process is completed.
8. Wait another 10 seconds, and then switch the toggle switch CHARGE back to the left.
9. To discharge press the red button “DISCHARGE”
   Warning: Do not discharge the surge generator if no specimen is connected!

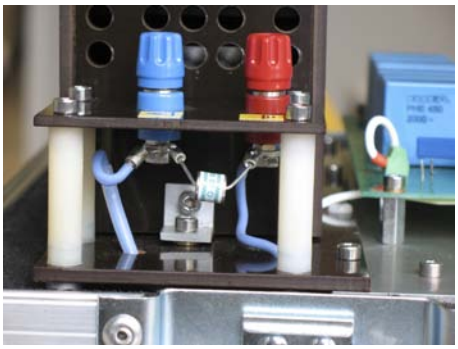
If the device does not trigger when the red button is pressed, turn the key counterclockwise to switch off the power.

The capacitors need at least 20 minutes to discharge themselves.

Afterwards the generator has to be bridged for security reasons. Do not touch the device beforehand.

The mobile surge generator may only be handled by especially trained personnel.





THE STRENGTHS OF LEUTRON SINCE 1947

The long experience and, therefore, the lead in research and development makes Leutron one of the leading manufacturers of isolation spark gaps. Intelligently designed components, compact constructions and an ideal choice of rare-gas fillings are only some elements that, in their totality, provide an optimal protection for various applications in the areas of electronics and electrical engineering.

Robust and powerful protection against direct lightning strikes – Leutron's isolation spark gaps.

GAS-FILLED ISOLATING SPARK GAPS FOR MORE SAFETY:

- Low DC and AC voltage protection level
- Very high ignition constancy even in demanding environments
- Maintenance-free due to automatic signalization in case of an overload
- Ideally suited for application in explosion-hazard environments
- Improved operator protection due to low sparkover voltage

Secure application
even in explosion-hazard environments

ISOLATING SPARK GAPS
FILLED WITH RARE-GAS

Hermetically closed, gas-filled isolation spark gap

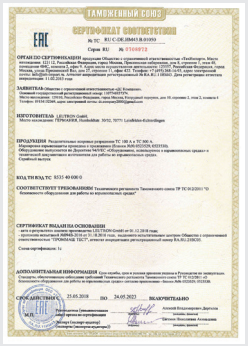
Fail-safe characteristic: The double fail-save limits the surface temperature in case of a fault

Optional remote signalling on request

EAC certificated

ISOLATION SPARK GAPS FOR AREAS IN DANGER OF EXPLOSION: ATEX

- High discharge capacity up to 100 kA (10/350 µs), class H
- Low sparkover voltage



Fail-safe characteristic: The double fail-safe limits the surface temperature in case of a fault

Hermetically closed, gas-filled isolation spark gap

Degree of protection IP 67 (according to IEC EN 60529), suited for outdoor application

Atex certificated
EAC certificated

TSF series

Rare-gas-filled spark gap for the lightning protection equipotential bonding, the insulation of electrically separated parts and the bridging of insulating flanges of gas pipelines.

example image

- High-quality industrial ceramics
- Rare-gas filled, hermetically sealed
- Free from radioactive substances
- High lightning current discharge capacity of 100 kA (10/350 µs) (class H)
- High reliability, robust
- Stable performance, long service life
- Fail-safe characteristic
- Test standard DIN EN 62561-3
- EAC certificated

For solid fixation of isolation spark gaps TSF 100 and TSF 500 at the installation. Easy replace is possible.

TA 100 C / TA 500 C

Rare-gas-filled spark gap for the lightning protection equipotential bonding, the insulation of electrically separated parts and the bridging of insulating flanges of gas pipelines. The product is for outdoor use where a high level of protection against lightning and other climatic influences as well as mechanical stress is needed.

example image

- High-quality industrial ceramics
- Rare-gas filled, hermetically sealed
- Free from radioactive substances
- High discharge capacity up to 100 kA
- Highly riliable, robust and waterproof
- Extremely low sparkover voltage
- Stable performance, long service life
- Fail-safe characteristic
- Test standard DIN EN 62561-3
- EAC certificated

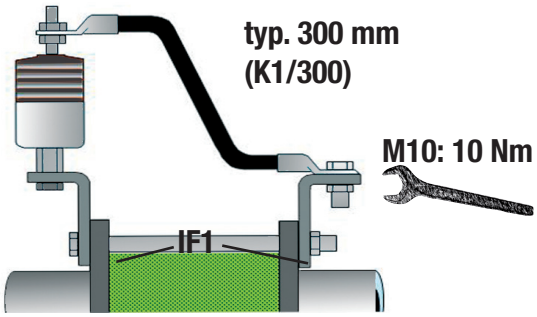
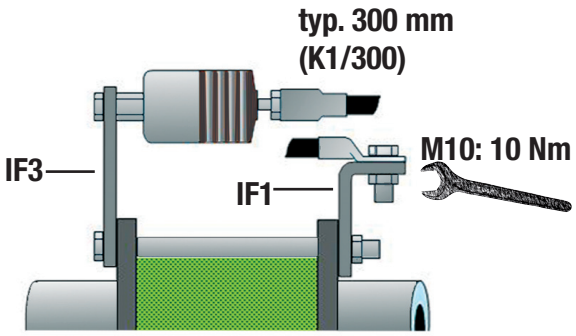
Connecting cable set for TC xxxA spark gaps / cable length (150, 300, 600 mm)

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

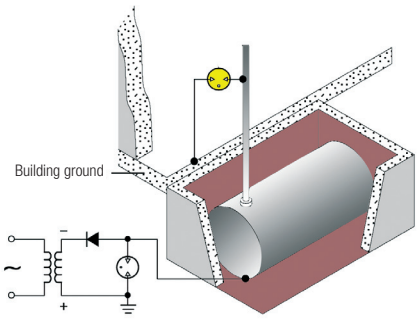
Mounting: to bridge insulating flanges

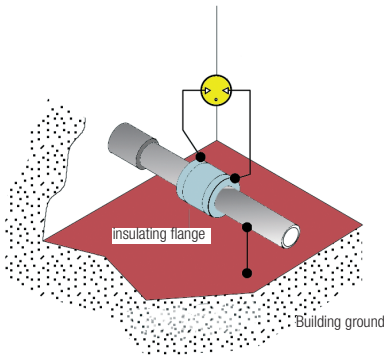


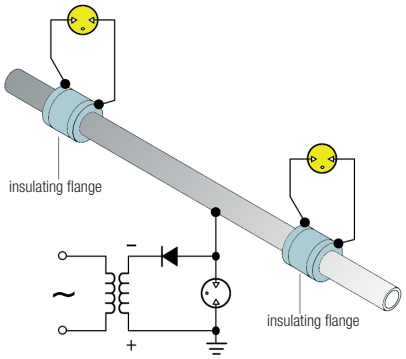


Use only tinned cable shoes or zinc plated connection parts (corrosion protection). All connections has to be safed by spring washer against shock and vibrations. For insulation parts, joint and flanges, as well as the GDT-Spark Gaps, it should not be able to be bridged by metal tools, metal parts, dirt, wast water or any current leading material.

Application examples







Description

Gasfilled spark gap for using in Ex areas.

- Filled with innert gas and hermetically sealed spark gap for Lightning protection equipotential bonding acc. to DIN EN 62305/VDE 0185 in Ex areas
- For indirect lightning protective connection / grounding, of separate grounded electrical systems
- To bridge insulation joints and parts, insulation flanges etc . in cathodic protected pipe-line sections
- For safe use in Ex-zones 1+2 (ex-hazardous gases up to temperature class T4)

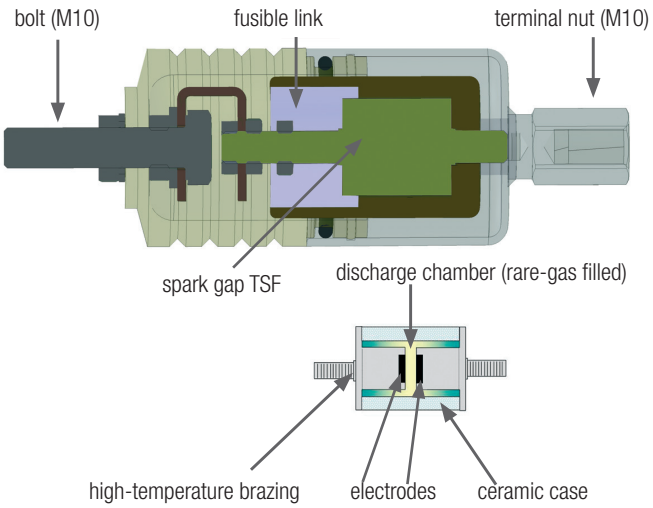
Accessories for TC 100 A / TC 500 A	
	TC Acrylic hood
Article-No.	49 50 80

Crystal clear acrylic hood for TC 100 A and TC 500 A, protects against dirt and rain outdoors.
(Figure on the right with spark gap)

1. Design and function of isolating spark gaps

When an overvoltage occurs, e.g. caused by lightning stroke, isolating spark gaps form a connection between earthing installations and parts of the equipment, which normally are galvanically separated. This equipotential bonding (lightning equipotential bonding, IEC/DIN EN 62305-3) reduces the potential differences caused by the lightning current.

1.1 Design of isolating spark gap TC 100 A and TC 500 A



Leutron isolation spark gaps consist of intelligently designed components built from quality materials. They are manufactured with the help of vacuum technology and other special procedures. A thoroughly monitored compliance with the narrow tolerances of the metal and ceramic construction parts are essential for always stable characteristics of all Leutron products.

1.2 Function

An isolation spark gap is a gas- or air-filled room enabling a discharge between two conductors (electrodes). When the potential difference between the two electrodes increases, the tension finally reaches the break-through voltage where the resulting electrical field causes the ionization of the gas within the gap. The gas becomes electrically conductive and the gap is bridged by a spark for fractions of a microsecond due to collision ionization.

The optimal choice of the rare-gas filling for the discharge chamber and the use of a well-suited expansion alloy for the electrodes are other important factors for reliability and quality.

2. Special features of Leutron isolating spark gaps

Rare-gas filled isolation spark gaps have properties superior to spark gaps in air. Some of the advantages are:

- Low DC and AC voltage protection level
- Significant improvement of operator protection
- Very high ignition constancy, even after stress events with impulse and AC currents
- Sparkover voltage totally independent of atmospheric air pressure and ambient humidity
- Sparkover voltage totally independent of atmospheric air pressure and ambient humidity
- Low mounting space requirements because no security distance is required
- No influence of corrosion on discharge characteristics due to rare-gas filling and high-temperature brazing
- Extremely high impulse and AC current carrying capacity
- Long service life with stable characteristics
- Double fail-safe (short-circuit) at overload and therefore continuity of protection for the installation against subsequent lightning strikes

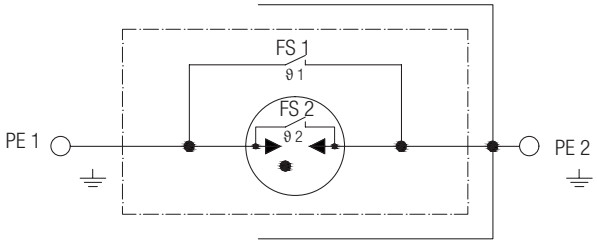


Fig.: Fail-safe 1 (FS 1) and Fail-safe 2 (FS 2) internal short-circuit

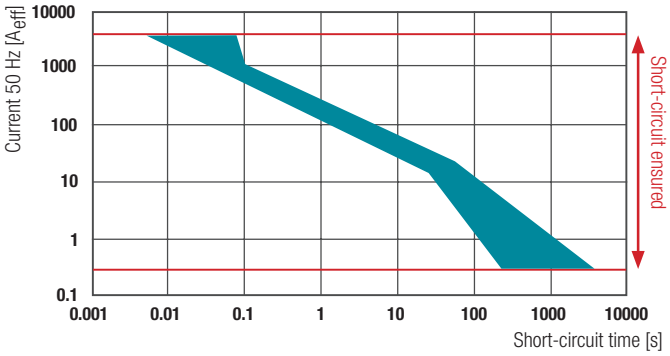

Fig.: Fail-safe temperature profile of the fusible element plotted over current/ time

After triggering of the fail-safe the isolation spark gap has to be replaced.

3. Technical specification

3.1 Mechanical properties

- Degree of protection IP 67 (dust-proof, with defined immersion)
- Dimensions (Ø x L): approx. 49 x 127 (total 160) mm
- Terminal connection: M10 bolt/nut (NIROSTA stainless steel)
- Casting compound: ARATHANE® CW 5631

3.2 Electrical properties

- Lightning impulse current (10/350 µs): 75 kA
- Lightning current carrying capacity class according to EN 62561-3:2013-02
- Nominal discharge current (8/20 µs) In: 100 kA
- 100% lightning impulse sparkover voltage: < 950 V (TC 100 A) / < 1300 V (TC 500 A)
- AC sparkover voltage (50Hz) Uaw: < 70V (TC 100 A) / < 350V (TC 500 A)

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

3.3 Environment

- Operating temperature range: -40°C ≤ T_{amb} ≤ 80°C
- Relative humity: 10% …95% rh

3.4 Applied standards

- DIN EN 60079-0:2012 + A11:2013 Explosionsgefährdete Bereiche: Betriebsmittel - Allgemeine Anforderungen
  Explosive atmospheres: equipment – general requirements
- DIN EN 60079-18:2015 Explosionsgefährdete Bereiche: Geräteschutz durch Vergusskapselung „m“
  Explosive atmospheres: equipment protection by encapsulation „m“
- DIN EN 62561-3: 2013-02; VDE 0185-561-3: 2013-02 Blitzschutzsystembauteile (LPSC): Anforderungen an Trennfunkenstrecken
  Lightning Protection System Components (LPSC): requirements concerning isolation spark gaps
- DIN EN 61643-11:2013-04; VDE 0675-6-11:2013-04 Überspannungsschutzgeräte für Niederspannung: Überspannungsschutzgeräte für den Einsatz in Niederspannungsanlagen - Anforderungen und Prüfungen
  Surge protective devices for low voltages: surge protective devices for application in low-voltage systems – requirements and testing

4. Routine tests

The isolation spark gaps TC 100 A und TC 500 A undergo a 100% electrical final testing. For the testing an automatic inspection and test unit E55B224 with a test adapter TC is used. The test unit is regularly calibrated and the calibration certifications are available.

5. Identification

Nameplate TC 100 A and TC 500 A:

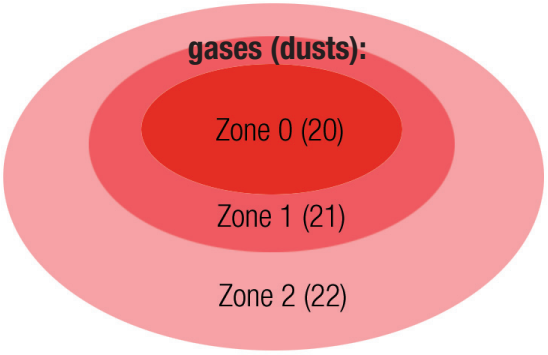
6. Protection against explosion

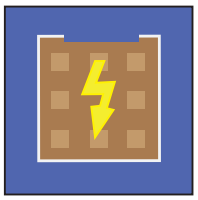
6.1 Zone categorization for gases and vapours (dusts):
Zone 0 (20): Constantly over long periods or often
Zone 1 (21): Occasional occurrence
Zone 2 (22): normally not; otherwise, for short periods only



6.2 Ignition protection type (gas)

Degree of protection	Sign	Zone	Device category	EN-standard
increased safety	e	1 o. 2	2 o. 3	60079-7
intrinsic safety	ia, ib, ic	0*, 1** o. 3	1*, 2**, o. 3	60079-11
over-pressure encapsulation	p	1 o. 2	2 o. 3	60079-2
oil immersion	o	1 o. 2	2 o. 3	50015
powder filling	q	1 o. 2	2 o. 3	50017
explosion-proof enclosure	d	1 o. 2	2 o. 3	60079-1
casting encapsulation	**mb**	**1 o. 2**	**2 o. 3**	**60079-18**
protection against ignition	n	2	3	60079-15
* only ia, ** only ia and ib				

6.3 Encapsulation „m“ (according to IEC) for TC 100 A and TC 500 A



Parts which could ignite an explosive atmosphere are encapsulated in a casting compound, which prevents an ignition of the explosive atmosphere. Electrical equipment can not ignite the surrounding explosive atmosphere (neither in normal operation nor under defined abnormal operation conditions).
Main application: mb = application in zone 1 or 2

6.4 Labelling according to ATEX directives of EN 60079: Gases

II	2	G	Ex	mb	IIC	T4	Gb
1	2	3	4	5	6	7	8

1 Product group: II, according to 94/9/EG (European ATEX directive)

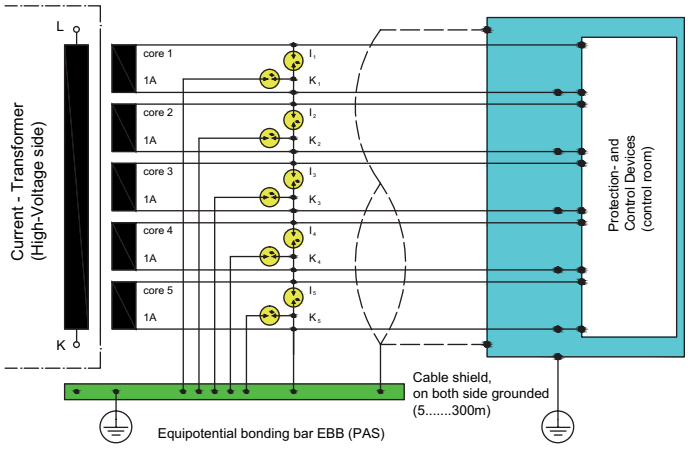
High-Voltage (HV) – Voltage-Transformer

The earth of voltage transformers, separated from the secondary coils must be bridged by isolating spark saps, to guarantee the equipotential bonding in case of lightning strokes.
By that a danger spark-over at the isolation of the measuring circuit and a destroy of the measuring circuit is avoided.



High-Voltage (HV) and Medium-Voltage (MV) Current-Transformer

At current transformers the protection against lightning as well as the protection of the cores in case of an unexpected no-load working condition must be guaranteed.
The suitable type of the isolating spark gaps must be selected according to the size of the current transformer.
LEUTRON has three kind of hermetical sealed spark gaps filled with inert-gas available which suit to transformers of different size.

These gas-filled and hermetically-sealed spark gaps protect the cores of current transformers in the event of overvoltages caused by open secondary circuit, lightning and switching operations in HV and MV networks. The overvoltages are restricted to a non-dangerous level and impulse currents discharged. This provides reliable protection without disturbing the normal operation of the transformer.

SMALLER, MORE COMPACT AND MOST EFFICIENT

Extended metal structures like gas pipelines are endangered by induced AC voltages from high-voltage overhead lines and suchlike. These voltages can cause corrosion and pitting and, therefore, have to be diverted. Leutron's PLPro is the most compact and, at the same time, most robust solution available for such problems.

The application of Leutron's worldwide tried and tested technology saves time and money.

PROTECTION OF OUTDOOR INSTALLATIONS:

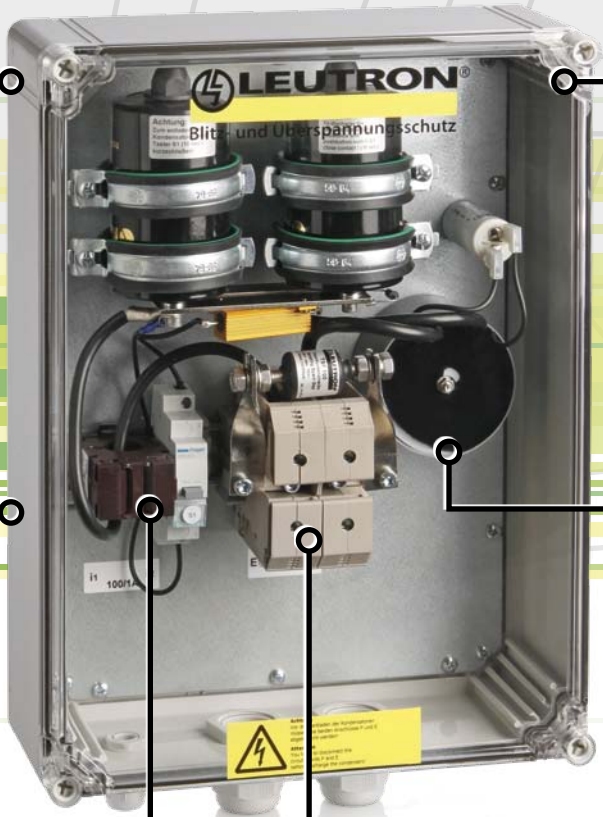
- Monitoring possible by remote measurement of the current flow
- Lightning current carrying capacity up to lightning protection level LPL 1
- No interference with detection signals on pipelines
- Cascadable, i.e., adaptable to the value of the current to divert
- Reliable diversion of harmful AC voltages in metal structures

Leutron's protective devices are
maintenance-free due to enclosed arresters

PIPELINE PROTECTION
DEVICES FOR AC APPLICATION

AC CURRENT DIVERTER FOR 80 A FOR THE PROTECTION OF CATHODIC CORROSION PROTECTION SYSTEMS (CCPS) OF PIPELINES

- High discharge capacity up to 100 kA (10/350 µs), class H
- Low sparkover voltage



Cascadable to divert higher currents

Arresters up to 80 A AC

Integrated current transformer to monitor the diverted current continuously

Lightning current up to 100 kA (10/350 µs), suited for lightning protection level LPL 1

No interference with detection signals on pipelines due to a bandpass filter

Connection terminal up to 150 mm²

REFERENCE: V&C KATHODISCHER KORROSIONSSCHUTZ GES.M.B.H., AUSTRIA

»For a number of years we now use Leutron's PLPro system to divert alternating currents. The systems installed so far operate smoothly, and we never received any complaints from customers. At the insulating flanges of our cathodic corrosion protection systems we very often apply ATEX certified isolation spark gaps TC 100 A. They too work to the satisfaction of our customers. So far no malfunction or break-down occurred.«

Total Package for Pipeline Protection

In order to protect CCP systems against the effects of lightning strokes and overloads by induced ac currents it is necessary to provide an effective protection. This is possible by installing an combined arrester type 1+2+3 (e.g. CT-T1+2+3/3+1-350-FM) at the ac power supply side of the CCPS and the EnerPro 65V/12A-Tr plus a DataPro2x1-RLC/50V-Tr on the dc side.

The pipeline has to be divided into sections by applying insulating flanges (joints) or insulating parts at pipelines with a narrow diameter. These sections limit the range of influence of the CCPS.

In case of a lightning stroke to the area, the insulating flange has to be bridged to prevent a potential difference that may result in an electrical flashover and, thus, damage to the inside or outside pipeline insulation. This equipotential bonding is achieved by applying special lightning current resistant, hermetically sealed high-performance isolating spark gaps (100 kA, 10/350 µs) filled with rare gas. Their fail-safe behaviour impedes mechanical damage at overloads.

Due to the bridged insulating flanges the pipeline, at a lightning stroke, acts like an earthing conductor. At certain distances an earthing point has to be set up, either at a pumping station or between them. In the latter case two isolation spark gaps are mandatory at the insulating flange, as mentioned above (5).

If the pipeline runs in parallel with overhead lines or ac cable systems, alternating currents are induced in the pipeline impeding the proper function of the CCPS and causing ac cathodic corrosion. The ac current diverter PLPro 40A-iV prevents this by diverting the induced alternating currents to ground while blocking the direct currents of the CCPS. Therefore, the CCPS continues to stay in effect.

Buried natural gas pipelines as well as drinking-water pipeline are protected with CCP systems.

Leutron makes sure that cathodic corrosion protection systems work properly and, thus, corrosion is given no chance.

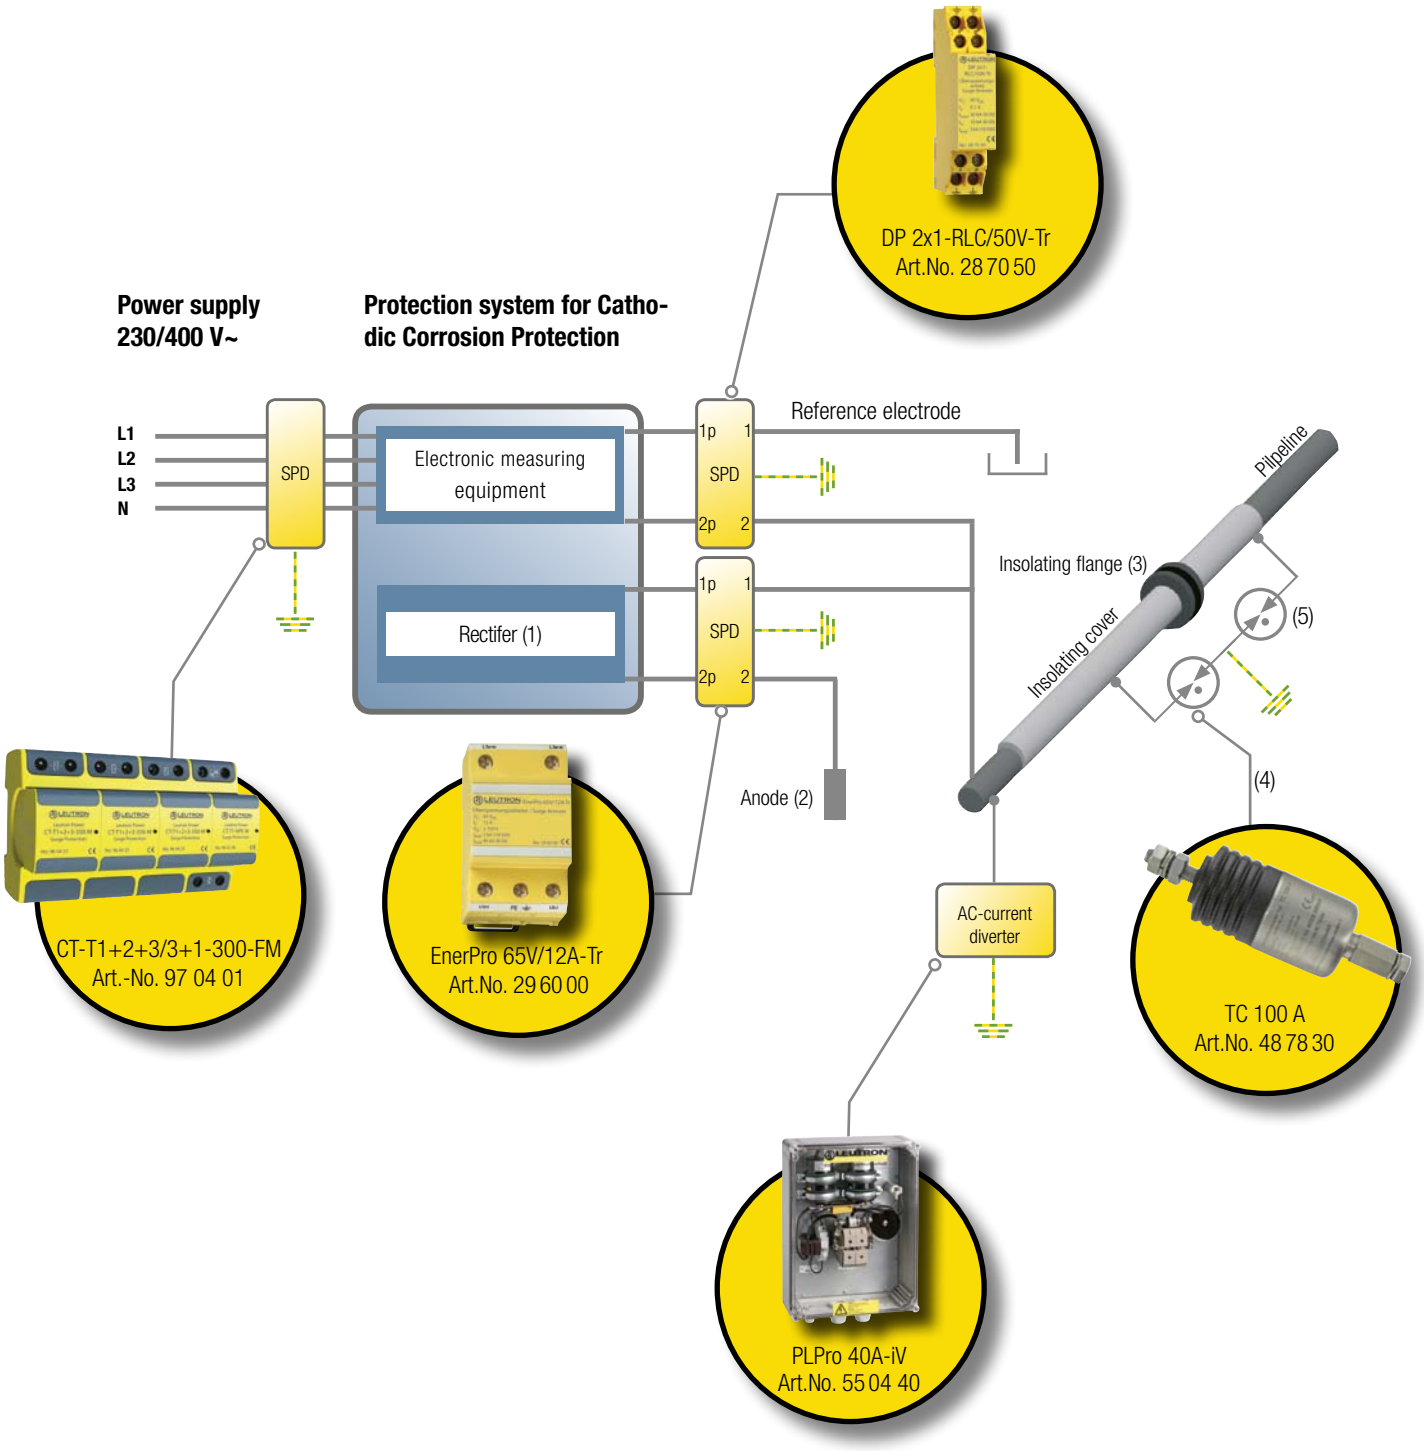
The PLPro 40A-iV is effectively and steadily protected against direct lightning strokes by an isolation spark gap TSF 100 (or TC 100 A in hazardous areas) with 100 kA (10/350 µs).
An integrated current transformer measures the diverted alternating current.

Pipelines that transport hazardous mediums like natural gas and run in a duct above or below ground have to be protected with ATEX-certified spark gaps with a low sparkover voltage (70 V ac / 100 V dc) (4) and fail-safe function. In case of direct-buried pipelines no ATEX certification of the isolation spark gap is necessary. Hence, the waterproof isolation spark gap SGO 70/100 QA is the preferred choice.

An HF filter, included as well, ensures an efficient operation and blocks the 10 kHz detection signal of HF leakage detectors. The amply dimensioned long-life power capacitors are additionally protected by fine-protection diodes.

Protection of a rectifer substation (LAF Brachwitz)

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de



Properties of PLPro:

- Integrated lightning and surge current protection up to 100 kA (10/350 µs)
- High impulse discharge current
- Safety switch for discharging the capacitors
- Does not have to be disconnected during leakage detection with HF detector (10 kHz)
- Can be mounted in a weather-proof outdoor cabinet or box without further protection measures
- Built-in measuring circuit with analogue display for ac discharge current
- No danger for operating personnel
- Maintenance-free

In general, PLPro consists of five components:

- AC discharge unit, consisting of high-performance capacities (2 pieces per 40 A)
- Surge protection device (fine protection) for the capacitors
- Measurement of the discharge current 100/1 A, AC current transformer, indicating instrument (on request)
- 10 kHz band-elimination filter which prevents the diversion of the 10 kHz search frequency of the leakage detectors against earth
- Lightning protection (coarse protection) by rare-gas-filled isolating spark gap 100 kA (10/350 µs) with low sparkover voltage

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

PLPro-iV

With an active cathodic corrosion protection the installation is permanently protected against the electrochemical process of corrosion. For that matter a grid supplied rectifier is inserted between the installation (e.g. a pipeline) and an anode that serves as earth electrode.

- AC discharge current: 40 or 80 A
- Several PLPro devices can be connected in parallel to raise the total discharge current
- Maintenance-free
- No disturbance of search signals
- Monitoring of discharge current with integrated current transformer possible
- IIntegrated lightning and surge current protection up to 100 kA (10/350 µs)
- Safety switch for discharging the capacitors
- execution with HSCS-500-FM: PLPro-40A-iV HSCS-500-FM, with remote signalling contact;
  Technical date of HSCS see page 213

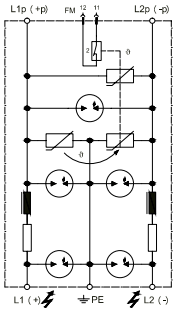
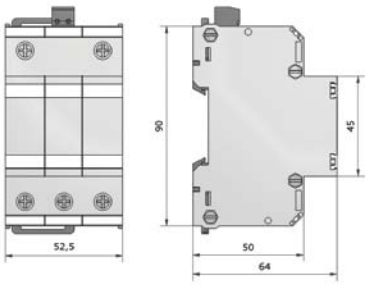
EnerPro 65V/12A-Tr

Two-pole surge arrester for operating currents up to 12 A and a nominal impulse discharge current of 20 kA (8/20 µs) for sensitive electronical devices.

- Two-stage design
- High performance surge protector
- Rated load current 12 A
- Maximum acceptable DC continuous operating voltage of 65 V DC
- With filter
- With remote signalling contact (FM)



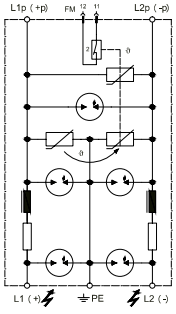


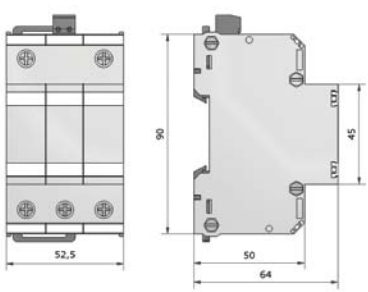
Technical Data		
Product name		**EnerPro 65V/12A-Tr/FM**
Artical-No.		29 60 02
Max. continous operating voltage DC	Uc	65 V=
Rated load current	IL	12 A
Protection level at 1kV/µs	Up	≤ 350 V
Nominal discharge current (8/20 µs)	In	20 kA
Max. impulse discharge current (8/20 µs)	Imax	40 kA
Lightning impulse current (10/350 µs)	Iimp	5 (2,5 As) kA
Nominal alternating discharge current (50 Hz)		20 (5x1s, 50Hz, 3min. Pause) A
Response time	tA	≤ 25 ns
Max. conductor cross section		stranded 35/fine stranded 25 mm²
Max. connection torque for terminals		4,0 Nm
Operating temperature range	TU	-40 - +80 °C
Enclosure material / colour		polycarbonate UL 94-V0 / yellow
Degree of protection (IEC EN 60529)		IP 20
Mounting on		35 mm DIN rail (EN 60715)
FM contact / contact type		break contact
Switching capacity		250 V/2 A
Max. conductor cross section FM		1,5 mm²

EnerPro 65V/20A-Tr

Two-pole surge arrester for operating currents up to 20 A and a nominal impulse discharge current of 20 kA (8/20 µs) for sensitive electronical devices.

- Two-stage design
- High performance surge protector
- Rated load current 20 A
- Maximum acceptable DC continuous operating voltage of 65 V DC
- With filter
- With remote signalling contact (FM)





Technical Data		
Product name		**EnerPro 65V/20A-Tr/FM**
Artical-No.		29 60 11

Max. conductor cross section FM		1,5 mm²

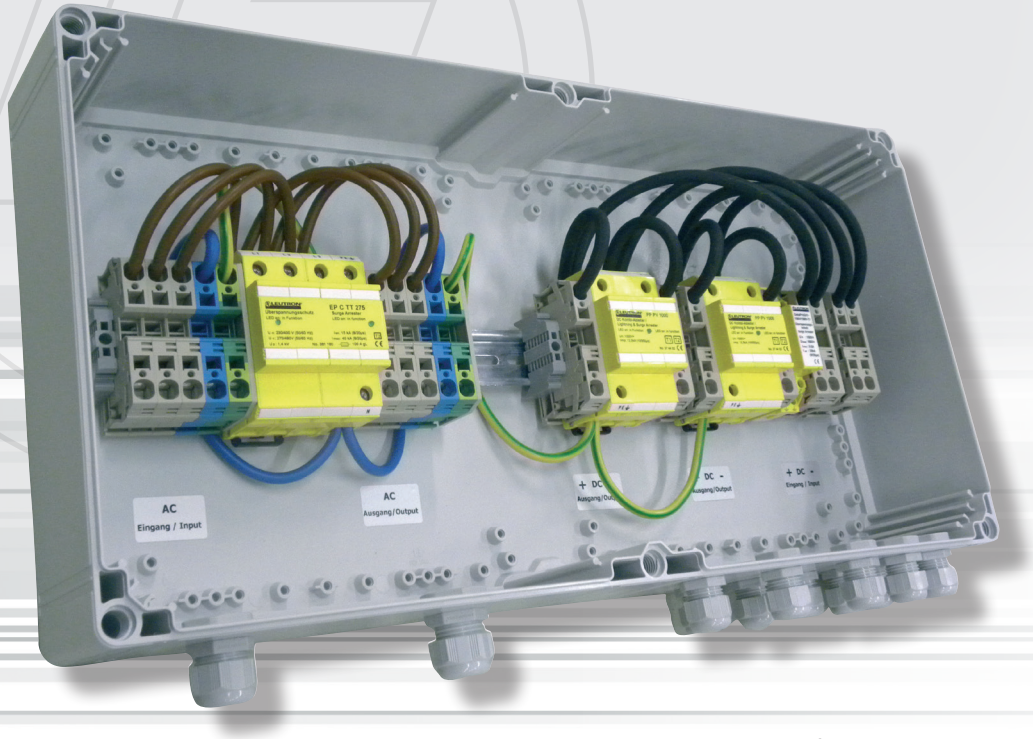
LEUTRON PROTECTS THE FUTURE

Because photovoltaic systems (among other things) are the future. Whether for new buildings or for renovations, for private residences or for office buildings: these systems are being installed on more and more roofs across the world.

In addition to the modules, the photovoltaic system is also integrated into the building‘s electrical systems, which are necessarily vulnerable todirect or indirect lightning strikes.
Lightning strikes and power surges have serious consequences: aside from production losses, there are also high repair costs - Costs that Leutron can keep down.

LEUTRON PROTECTS PHOTOVOLTAIC SYSTEMS UP TO 1000 V DC

- External lightning protection
- Use und dimensioning of Surge Protective Devices

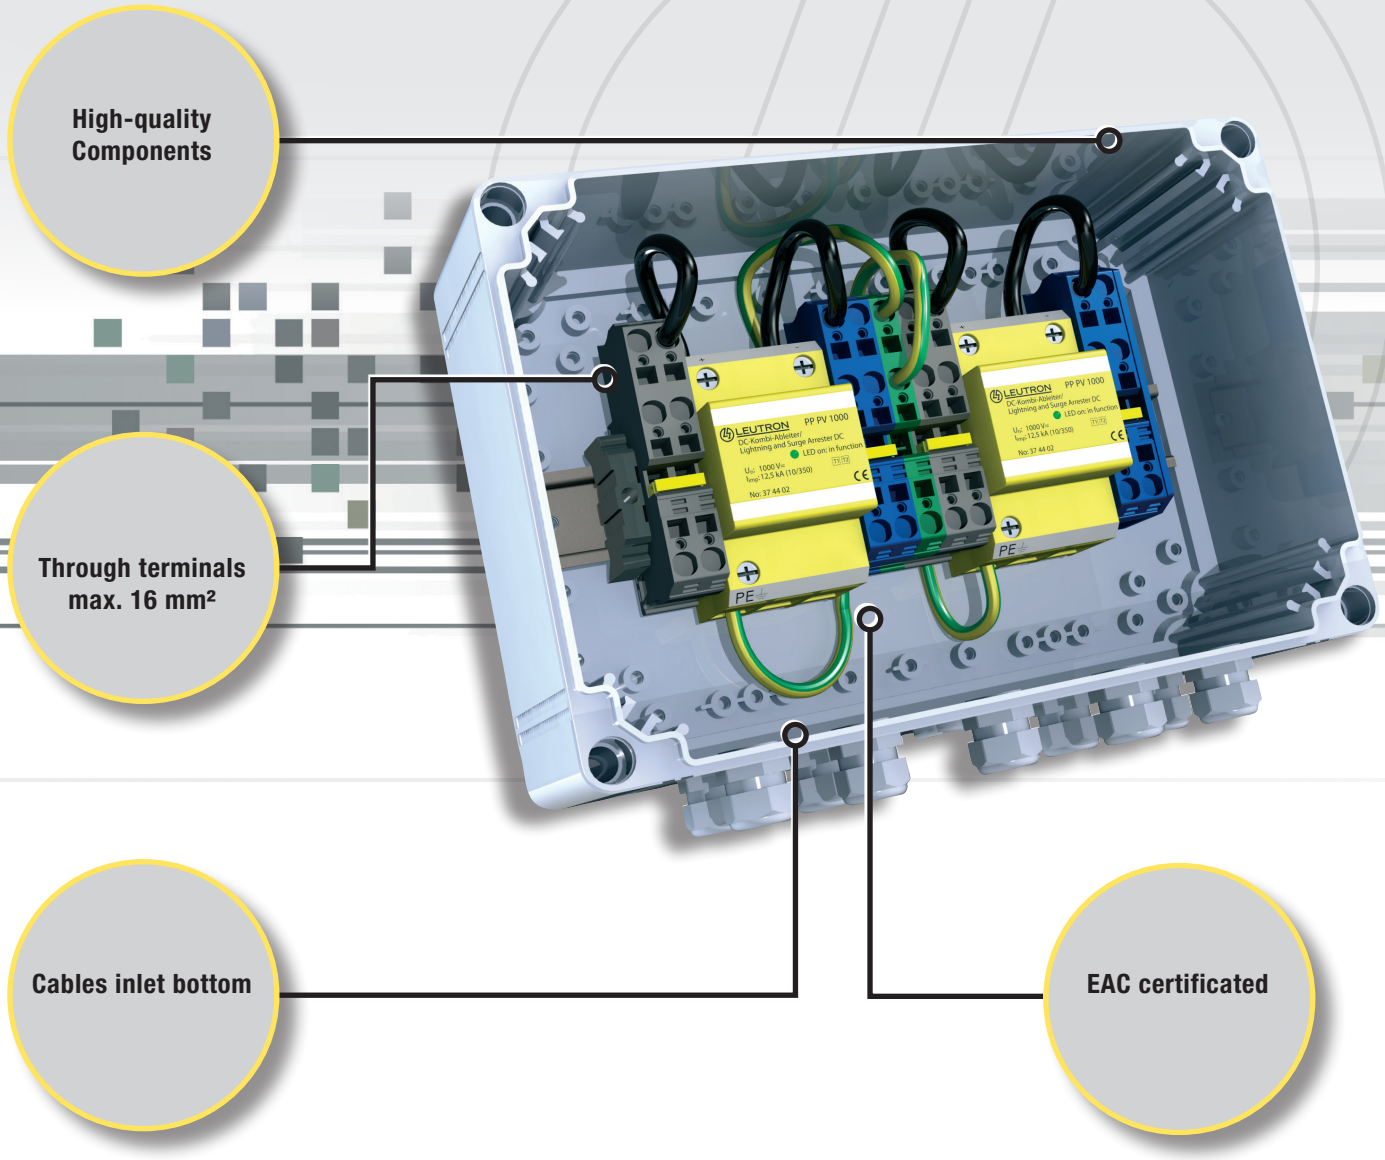


High-quality protection devises for Photovoltaic systems:
Generator Connection Box with Surge Protection Devicees

SURGE PROTECTION
OF PV SYSTEMS

ALL-ROUND PROTECTION WITH GENERATOR CONNECTION BOXES

- Efficient installation: Several strings of the PV arangement are brought togehter in one point
- Cable installation without effort
- Realization of projekts are flexible, safe and economical
- Thanks of SPD type 1+2 (class I+II) effective surge protection is real
- EAC certificated

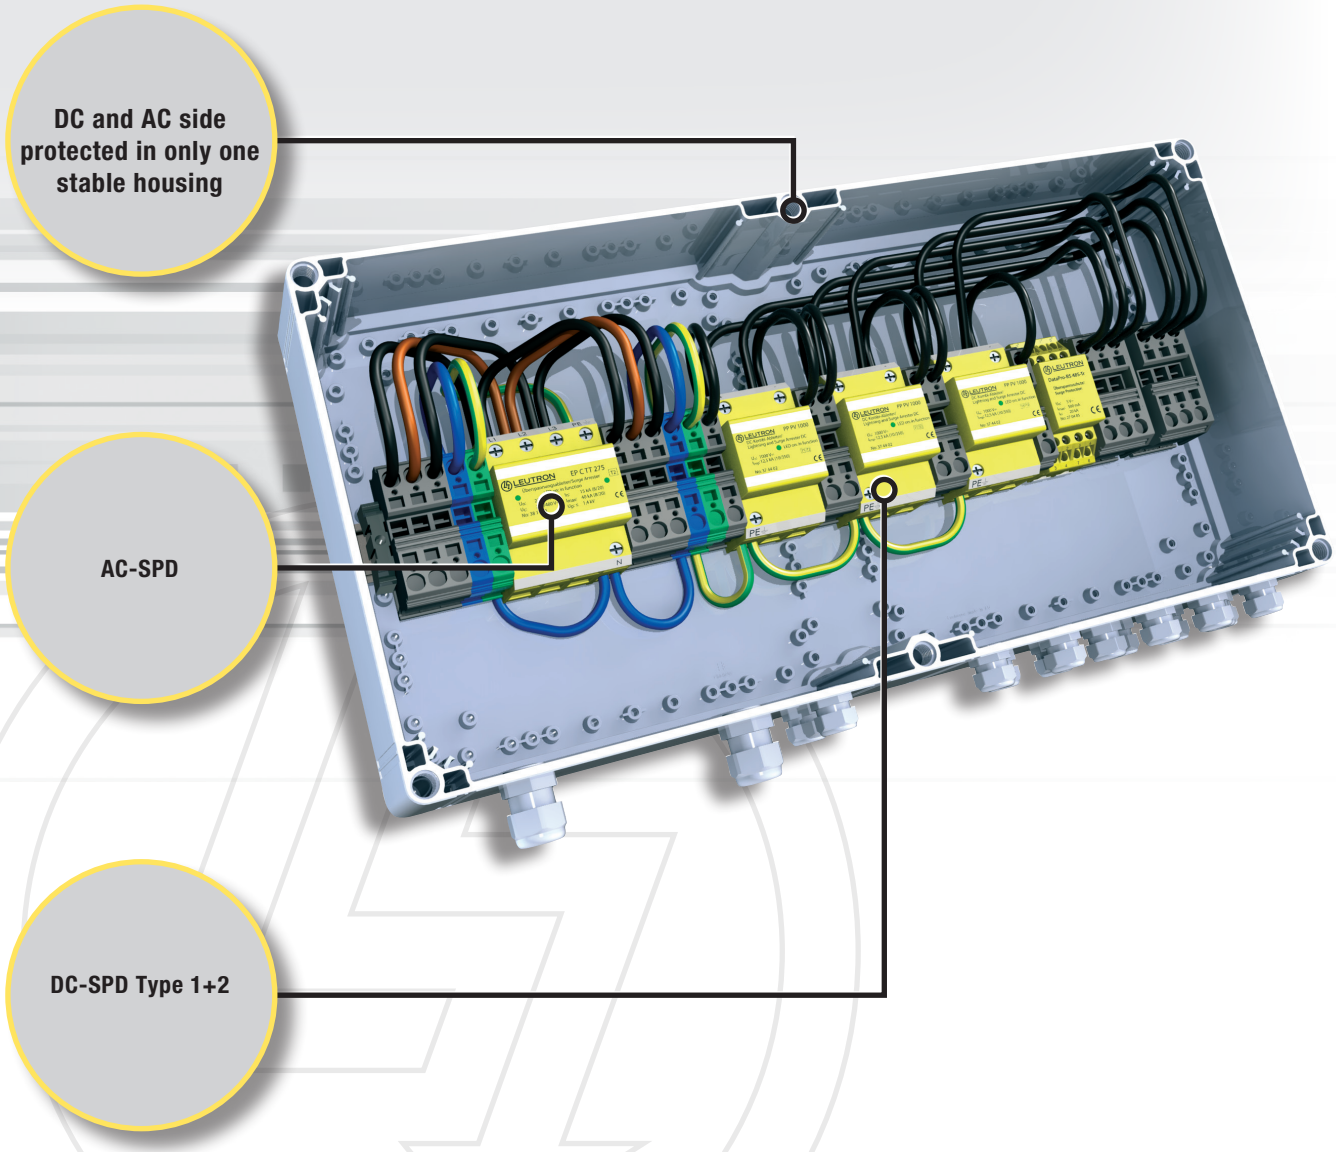


SELECTION GENERATOR CONNECTION BOXES

- Open-circuit voltage of the strings
- Number of the strings
- Number of the MPP tracker

CHARACTERISTICS OF GENERATOR CONNECTION BOXES

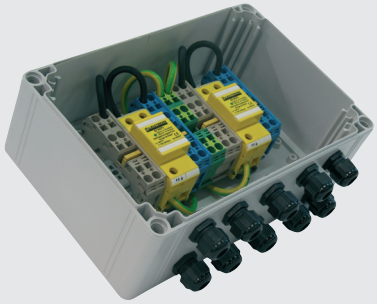
- For DC or DC/AC installations
- With or without remote monitoring
- For the use with string fuses and string diodes
- For outdoor installation
- UV resistance
- Protection class II



Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

GAK 2+2

Generator connection box for maximum 2x five terminal points for two MPP tracker. Application: to protect inverter with two MPP trackers or two inverter with each one MPP tracker.
The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.



example image

- Housing of surface mounting (300 x 200 x 132 mm) is UV resistant
- 2x 5 terminal points (e. g. 2x 2 input terminals and 2x 2 output terminals)
- Two surge arrester included
- Terminals can be used as points of measurement
- EAC certification
- With remote signalling contact (FM)
- Degree of protection (IEC EN 60529): IP66

GAK 2x5 T1+T2 1000V-DSK

Generator connection box with fuse holders to take dc string fuses on plus or minus side. For PV systems to protect the inverter rectifer with two MPP trackern.
The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.

- Housing of surface mounting (600 x 300 x 132 mm) / IP66
- Input / Output: five strings in for plus and five strings out for minus
- Two combined arrester Type 1+ 2 with 1000 V dc
- For two MPP trackers
- With remote signalling contact (FM)
- EAC certification

Technical Data		Product name		**GAK 2x5 T1+T2 1000V-DSK-FM**
Article-No.		80 04 50
Max. system voltage	UocSTC	1000 V=
Max. current per input terminal (+)		30 A DC
Max. current per output terminal		57 A DC
Operating temperature range	TU	-40 - +80 °C
Cross section for E-termials (entry)		16 mm²
Cross section for A-terminals (exit)		16 mm² single wire / stranded
Cable feedthrough		21x M20
Degree of protection (IEC EN 60529)		IP 66
Dimensions of housing (H × W × D)		600 x 300 x 132 mm
Net weight / pc		7000 g
SPD acc. to EN 61643-11		Type 1 + 2 / class I + II

GAK 5x1 T1+T2 1000V

Generator connection box with fuse holders to take dc string fuses on plus or minus side. For PV systems to protect the inverter with five MPP trackers.
The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.

- Housing of surface mounting are UV resistant / IP 66
- Input / Output: parallel circuit of each one string
- Five DC combined arrester Type 1 + Type 2 / class II with 1000V
- For five MPP tracker
- With remote signalling contact (FM)
- EAC certification

Technical Data		Product name		**GAK 5x1 T1+T2 1000V-FM**
Article-No.		80 04 55

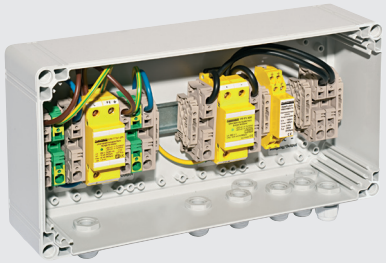
Complete protection of inverter

PV AC-DC

For 1 or more strings in 1 or 3 phase AC systems. Complete overvoltage protection for inverters. Mounting it directly nearly inverter is advantageous. The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.



example image

- AC side: surge arrester Type 2 / class II
- DC side: combined arrester Type 1 + Type 2 / class II
- Signal and data line protection: IEC category C1/C2/C3
- With remote signalling contact (FM)
- EAC certification

Protection of inverter rectifier AC-side

GAK AC

Generator connection box for 3 phase TNS systems. Application: e. g. at PV systems to protect the AC side of the inverter rectifier.
The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.

- Housing of surface mounting (300 x 200 x 132 mm) / IP66
- 4 pole combined assrester PP BC TNS 25/100/FM
- With remote signalling contact (FM)
- EAC certification

Technical Data		
Product name		**GAK AC-3 T1+T2-FM**
Article-No.		80 01 84
Cross section for E-termials (entry)		16 mm²
Cross section for A-terminals (exit)		16 mm² single wire / stranded
Cable feedthrough		2x M25/1x M20
Degree of protection (IEC EN 60529)		IP 66
Dimensions (L x W x H)		300 x 200 x 132 mm
Operating temperature range	TU	-40 - +80 °C
SPD acc. to EN 61643-11	Typ	Type 1 + 2 / class I + II
Nominal voltage AC	UN	230/400 V~
Max. continuous operating voltage AC (50/60Hz)	Uc	255 V~
Insulation resistance	Risol	> 10 GΩ
Protection level at 100% lightn. impulse sparkover voltage (1.2/50µs)	Up	≤ 2,5 kV
Protection level at limp L-PE	Up	≤ 2,5 kV
Lightning impulse current (10/350) L1+L2+L3+N-PE	Itotal	100 kA
Lightning impulse current (10/350) L,N-PE	Iimp	25 kA
Follow-on current extinguishing capability at Uc (50/60 Hz)	Ifi	4 kA
Short-circuit withstand capability at max. back-up fuse	Ik	50 kAeff
Max. acceptable back-up fuse F2 (spur wiring)		250 A gL/gG

Special edition GAK

PV DC 1/1

Generator connection box for maximu one string for one MPP tracker. For connection with MC4 connectors.
The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.

- Housing of surface mounting (200 x 200 x 132 mm) / IP66
- Input / Output: parallel circuit of each one string
- One combined arrester Type 1+ 2 with 1000 V dc
- With remote signalling contact (FM)
- EAC certification

Technical Data		
Product name		**PV DC 1/1 1xT1+2 1000V/ MC4-FM**
Article-No.		80 01 79
Max. system voltage	UocSTC	1000 V=
Max. nominal current per MC4 plug socket		30 A
Max. nominal current per MC4 jack		30 A
Operating temperature range	TU	-40 - +80 °C
Cable feedthrough		1x M16 / 4x MC4
Degree of protection (IEC EN 60529)		IP 66
Dimensions (L x W x H)		200 x 200 x 132 mm
SPD acc. to EN 61643-11		Type 1 + 2 / class I + II

Special edition GAK

Fuse Combiner Box

The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.

- Housing of surface mounting (200 x 200 x 132 mm) / IP66
- with string fuses of 12A , up to 1000 V DC
- Protection of batteries in PV systems

Technical Data		
Product name		**Fuse Combiner Box**
Article-No.		80 01 72
Operating temperature range	TU	-50 - +120 °C
Querschnitt Klemme		16 mm² single wire / stranded
Cable feedthrough		6x M16
Dimensions (L x W x H)		200 x 200 x 132 mm
Degree of protection (IEC EN 60529)		IP 66/67

GAK 2x2 Zw

Generator connection box without surge protection. Application: in PV systems; Stringbox to protect the inverter with two MPP trackers or four terminals per plus and minus pole each.
The technical connection conditions of the inverter manufacturer are to be observed! If several module strings are connected in parallel, the instructions of the module manufacturer regarding reverse current resistance must be observed.

- Housing of surface mounting (200 x 200 x 132 mm) / IP66
- without surge protective devices

Technical Data

PV Connection boxes

Two- and four-pole type 2 surge arrester in IP 65 to protect one MPP input or two MPP inputs.
Simple and quick implementation of the surge protection, as no additional space is required in a separate insulating housing. The function display is mechanical: the status of the surge arrester is displayed optically.

DAK 2x 16

Pin-shaped terminal to enable feed-through wiring (V-wiring) for all surge protection modules with only one clamp per phase, such as PP PV 800 and 1000 and other SPDs for power supply systems.

- Looped-in wiring for SPD with only one connection terminal
- Connection of 2 lines at only one terminal possible
- AnConnection of max. 2x 16 mm² fine-stranded
- Conformed by standard looped-in wiring (V connected)
- Acc. to DIN VDE 0100-534

Tests for Flammability of Plastic Materials for Parts in Devices and Appliances.
Describes a method for assessing and classifying the flammability of plastics.
It became the same content in the standards
IEC / DIN EN 60695-11-10 and -20 and the Canadian CAN / CSA C 22.2 No.017 taken over.

VDE-AR-N 4100 Application Rule: 2019-04
Technical rules for connecting customer systems to the Low-voltage network and its operation (TAR low voltage)

VDE-AR-N 4105 Application Rule: 2018-11
Generation plants on the low voltage grid and their operation (TAR medium voltage)

VDE-AR-N 4110 Application Rule: 2018-11
Technical rules for connecting customer systems to the Medium-voltage network and its operation (TAR medium voltage)

VDE-AR-N 4130 Application Rule: 2018-11
Technical rules for connecting customer systems to the High-voltage network and its operation (TAR high/maximum voltage)

Do standards and application rules have to be adhered to?

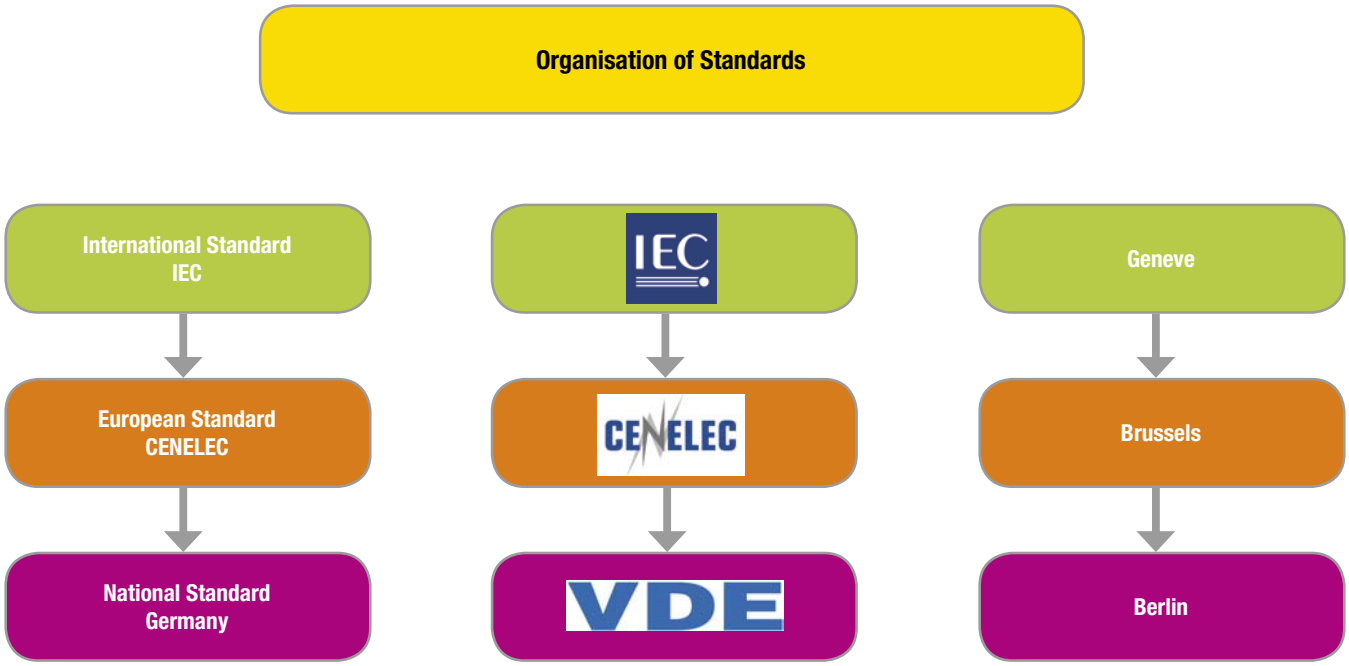
The simple answer is „no".
Norms are created by private law organizations (see above) and do not have the same status as a law.
The legislature itself occasionally refers to norms (in which case they are binding in any case). It is then always assumed that a standard represents the current state of the art.

When is there a dispute over compliance with standards?

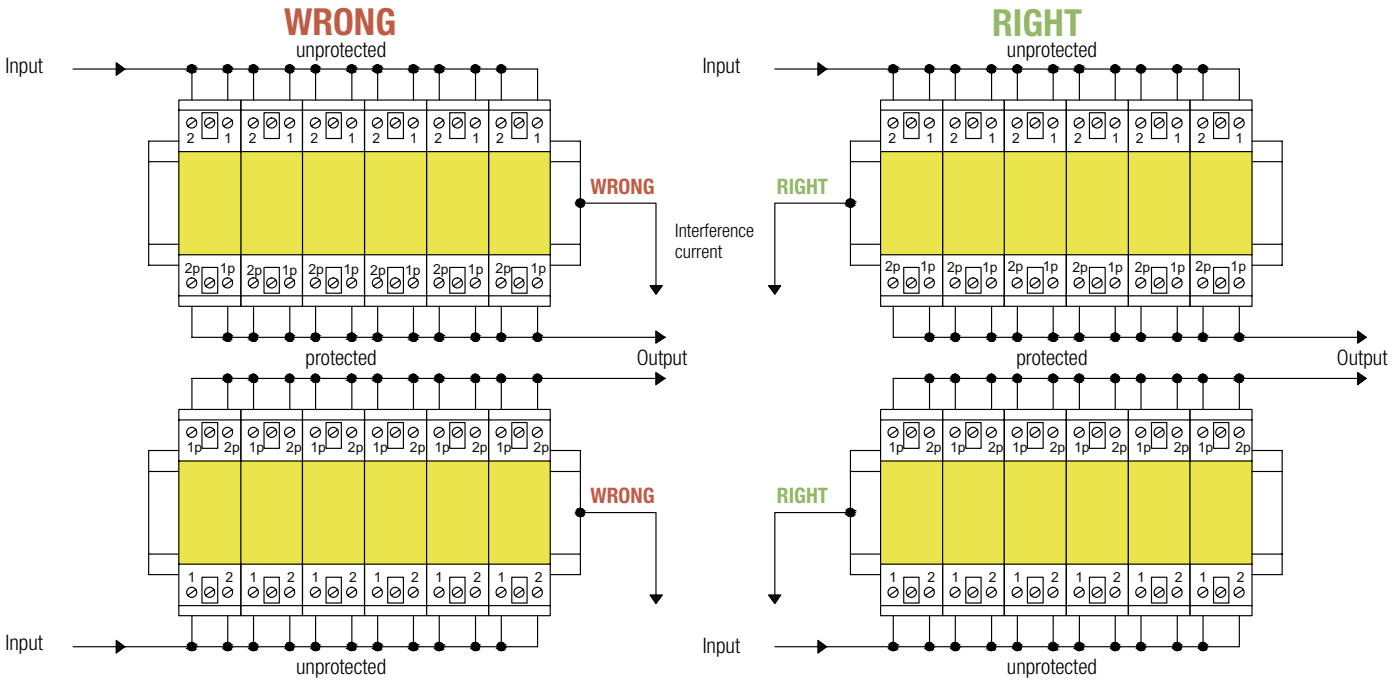
If something went wrong and there was a damage.
If you believe that you do not have to comply with a standard, then you should have good reasons for doing so and be able to represent it safely and competently in the event of a dispute.

On the safe side you are definitely, if you comply with the valid standards.

It is therefore strongly recommended to know the most important standards and to comply with them during planning and construction.

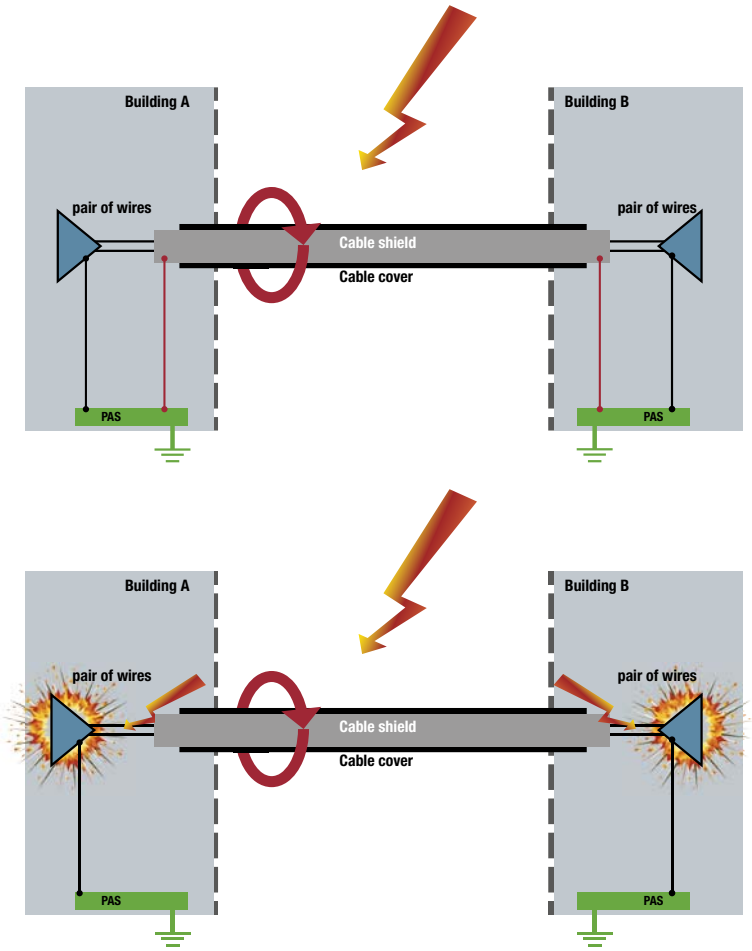


It should be noted that protected and unprotected line are separated.

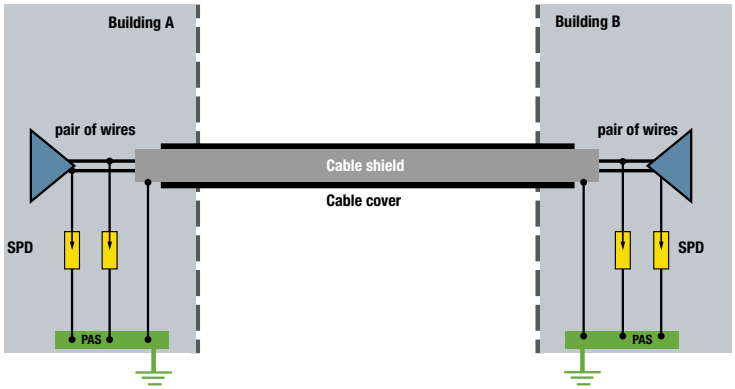


Wiring: Protected and unprotected lines must not be laid side by side in parallel. They are to be separated so that overvoltage input coupling is excluded.

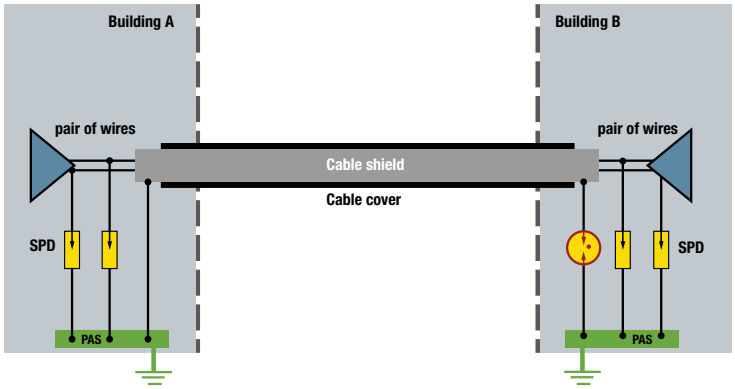
Installation of cable shields



Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de



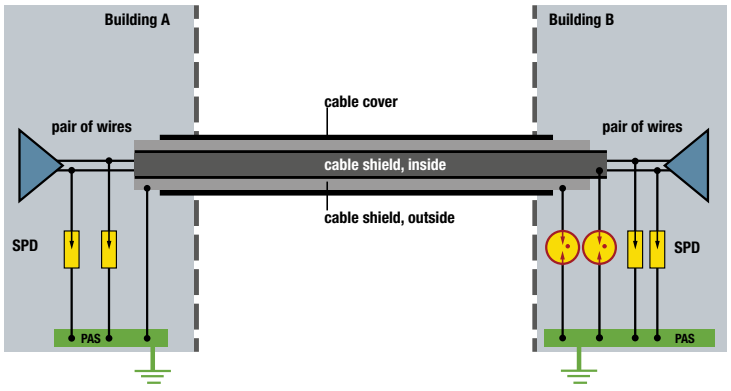
Bilateral directly shielded connection



Undirectly shielded connection – high resistance grounding

If there is no possibility of earthing the cable shield on both sides because of technological reasons, the non-earthed side has to be connected to the ground via a gas-filled surge arrester (GDT) or an isolation spark gap (up to 100 kA, 10/350 µs).

If a surge occurs, the shield will be connected to the ground via the gas discharge path diverting the en-ergy of the surge. This way, flas-hovers to the ground, to other cables or installation parts are avoided.



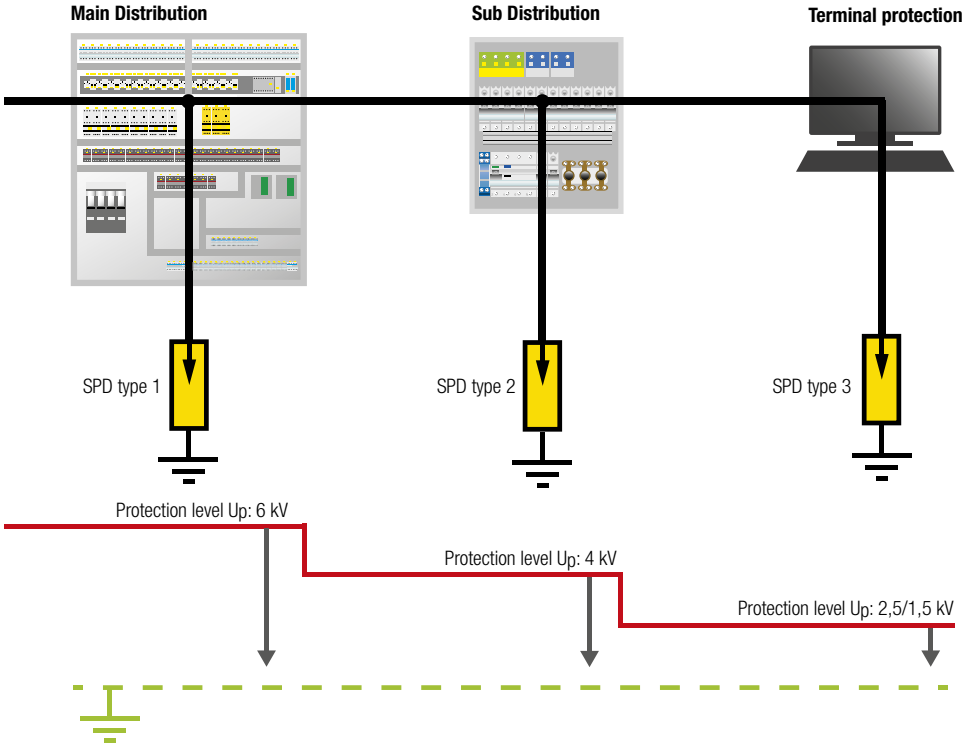
The inner screen is one-sided, the outer screen is connected on both sides. To reduce such disturbing influences in a line screen con-nected to both sides, a side is often also connected to the reference potential via a capacitor. This interrupts the earth loop at least for direct currents or low-frequency currents.

Comparison of arrester classification

Surge Protective Device	Power supply	MCR technology*)
	DIN EN 61643-11	DIN EN 61643-21
Lightning current arrester	Type 1 (class I, coarse protection)	category D1
Surge protective arrester	Type 2 (class II, middle protection)	category C2
Terminal protection	Type 3 (class III, fine protection)	category C1

*) test categories by table 3 of DIN EN 61643-21/VDE 0845 3-1:2002

Overview protection level SPD



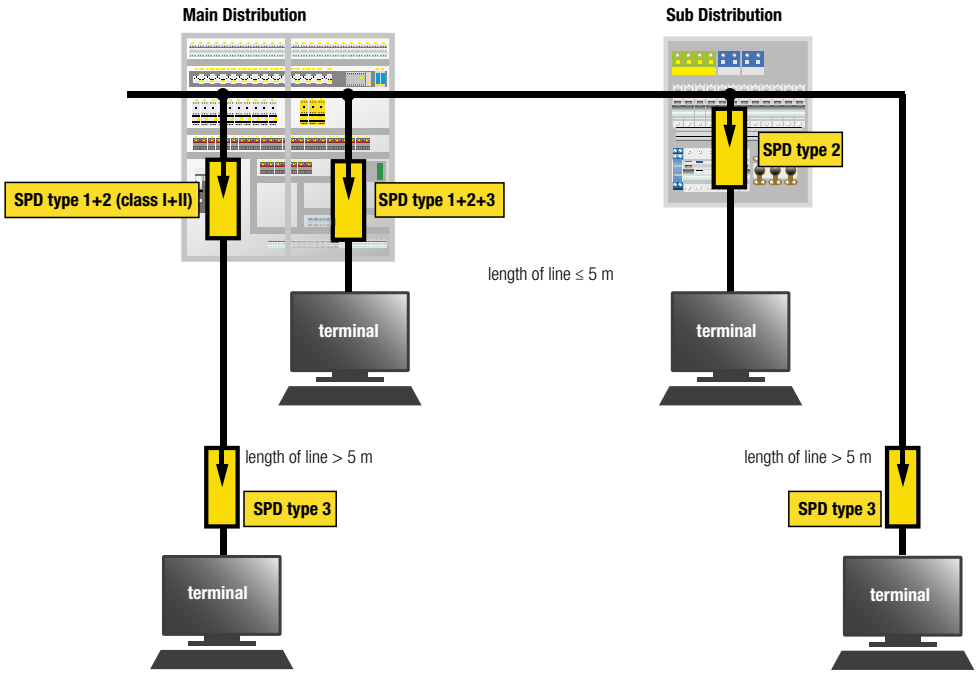
At power supply protection SPDs are always connected parallel to PE, that means: without influence of the lines.

According to the standard, the task of over-voltage arresters is to gradually reduce the lightning currents to an acceptable level.

This means that SPD type 1 must limit the protection level to 4 kV, type 2 to 2.5 kV and type 3 to 1.5 kV.

(acc. to DIN VDE 0100-443, overview table 1)

Length of lines



Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

Active Parts
Active parts are conductors and conductive parts of equipment that are alive under normal operational conditions.

Aging
Aging is the alteration of the original conductivity. It is caused by disturbance pulses, normal operation or unfavourable environmental conditions.

Approach (today: Separation Distance)
An approach is a too narrow distance between the lightning protection installation and conductive installations or electrical installations with a risk of a flashover or breakdown at lightning strikes.

Arc Voltages Ubo
The arc voltage is the instantaneous value of the voltage over a discharge path during an arc discharge process.

Arresters
Equipment that in general consists of voltage-controlled resistors and/or spark gaps. Both items can be used separately or connected in series or in parallel. Arresters protect other electrical equipment or installations against unacceptable high surge voltages.

Asymmetrical Interference
"Asymmetrical" means that the interference source or drain is related to the ground. It exists a capacitive or galvanic connection to the protective conductor.

Asymmetrical Voltage, Common-Mode Voltage
Average voltage between every conductor and a specified reference point, usually reference earth or ground.

Burst
A burst consists of repeatedly occurring pulses within a certain time period.

Combined Arrester
The combined arrester is a surge-voltage protection device consisting of lightning current arrester and surge arrester.

Combined Impulse
A combined impulse is generated by a combination wave generator which generates a no-load impulse voltage (1.2/50 µs), respectively, a short-circuit impulse current (8/20 µs). The voltage, the amplitude of the current and the waveforms are determined by the generator and the impedance of the SPD. The ratio of the peak values of the no-load voltage and the short-circuit current is 2 Ohm. This value is called the fictitious impedance Zf. The short-circuit current is referred to as Ics. Uoc is the no-load voltage of the generator.

Critical Discharge Current i_{SG}
The critical discharge current is a current pulse of the waveform 8/20 µs which just about triggers the disconnection device and which does not yet lead to a mechanical damage of the arrester.

Direct or Close-up Strikes
Direct and close-up strikes cause surge voltages with an energy content that contains a considerable part of the total energy of a lightning discharge.

Disconnection Device
If an arrester fails to operate, the disconnection device separates it from the power grid to avoid a fire hazard and to report the defective arrester. Note: It is not the task of the disconnection device to ensure the protective measure Protection at indirect contact.

Disturbance Voltage, symmetrical
The symmetrical disturbance voltage is a disturbance voltage between two wires of a conductor (e.g. at a double-circuit line) or between the terminals of an electrical installation for such a line.

Earth
Earth signifies the ground or the soil.

Earthing (noun)
Earthing refers to the total of all means and measures for earthing.

Earthing (verb)
To earth means to connect a conductive part, e.g. the lightning protection installation, via an earth-termination system to the earth.

Earthing Conductor
The earthing conductor connects the installation which has to be earthed with the earthing electrode, as far as the earthing conductor runs above soil or insulated in the soil.

Earthing Electrode
An earthing electrode is a conductor buried into the ground with an electrically conductive connection to the earth. Parts of connectors that run to the earthing electrode which are lying non-insulated in the ground are part of the earthing electrode as well.

Electromagnetic Compatibility (EMC)
The electromagnetic compatibility of a device or a system is its capability of a satisfactory operation in its electromagnetic environment, without causing unacceptable electromagnetic disturbances to other installations in this environment.

Electromagnetic Interference
The electromagnetic interference refers to a quality loss in operational behaviour, a malfunction or the breakdown of an electrical or electronically device caused by an electromagnetic disturbance.

Electrostatic Discharge (e.s.d.)
An electrostatic discharge is the transfer of electric charges between objects with different electrostatic potentials, which takes place at approximation or contact.

Endurance Test
In an endurance test the surge arrester has to undergo load tests, that simulate loads frequently occurring in practice.

Equipotential Bonding (Potential Equalization)
Potential equalization means to remove potential differences (at the operation of consumer's electrical installations), e.g. between the protective conductor of the electrical power installation and the pipes for the water, gas and heating supply, as well as between the individual pipes.
The equipotential bonding at lightning effects requires measures beyond the specifications of VDE 0190. Therefore, the lightning protection installation is connected to other conductive installations via conductors or isolation spark gaps and, if necessary, to active parts of electrical installations via surge protection devices. These measures are called "lightning protection potential equalization".

Equipotential Bonding Bar
This bar connects protective conductors, potential equalization conductors and, where applicable, functional earthing conductors with the earthing conductor and the earth electrodes.

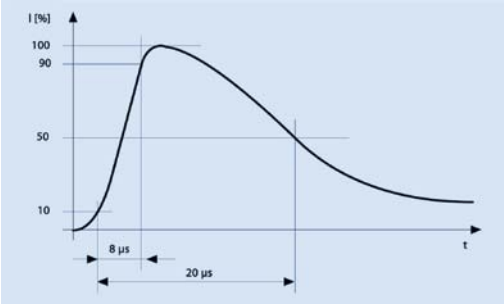
Follow-on Current I_f
The follow-on current flows through the SPD after the diverting process. It is supplied from the grid and differs fundamentally from the continuous operating current.

Foundation Earthing Electrode
The foundation earthing electrode is a conductor that is embedded into the concrete foundation of a construction.

Gas-filled Surge Arrester (GDT)
A gas-filled surge arrester is a discharge path filled with another gas than air, normally rare gas.

Ground Resistance
The ground resistance is the resistance between the earthing system and the reference earth. The amount of the ground resistance depends on the interaction of the individual earthing electrodes.

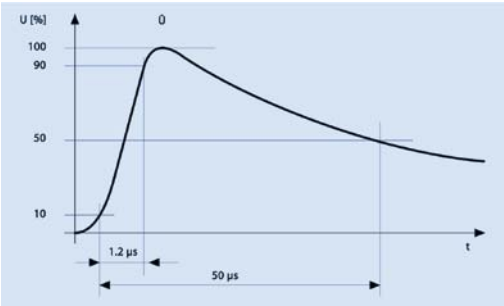
Impulse Current (8/20)
This impulse current has a front time of 8 µs and a time to half-value of 20 µs.



Impulse Discharge Current
Discharge current that flows through the arrester after it is triggered. It is given as a peak value. The nominal impulse discharge current is the peak value of an impulse current of the pulse form 8/20 µs.

Impulse Sparkover Voltage of a Surge Protection Device
Highest voltage value between the electrodes of the spark gap of a surge protection device, just before the sparkover occurs.

Impulse Voltage (1.2/50)
This impulse voltage has a front time (between 10 % and 90 % of its peak value) of 1,2 µs and a time to half-value of 50 µs (at Uoc = 6 kV).



Impulse Withstand Voltage U_{st}
The impulse withstand voltage is the peak value of the highest pulse voltage of a predefined waveform and polarity, which does not result in a breakdown under predefined test conditions. The impulse withstand voltage is equal to or higher as the rated impulse withstand voltage.

Insertion Loss
The insertion loss of an SPD is, at a given frequency, the ratio of the voltages at a supply network point immediately downstream to the SPD before and after the insertion of this SPD. The value is given in decibel.

Insulation Resistance R_{iso}
The insulation resistance is the resistance of the surge arrester in the non-conductive state.

Interference Suppression
Interference suppression comprises all measures to abate or avoid electro-magnetic interferences.

Isolation Spark Gap
The isolation spark gap is a spark gap to isolate conductive parts of an installation. When the spark gap is triggered by a lightning strike, the parts are temporarily conducted (lightning-protection equipotential bonding).

Lightning Current Arrester
The lightning current arrester is a surge-voltage protection device which is capable of carrying direct lightning currents.

Lightning Impulse Current Discharge (Lightning Impulse Current)
The 10/350 µs lightning impulse current has a front time of 10 µs and a time to half-value of 350 µs.

Lightning Impulse Current I_{imp}
The lightning impulse current limp is defined by its peak value Imax, its charge Q and the specific energy W/R with a 10/350 µs waveform. The test is carried out according to the test procedure of the operation duty test. It is used to classify the test for class I surge protection devices.

Lightning Protection Installation
The lightning protection installation is the sum of all equipment for the external and internal lightning protection of the installation to be protected.

Lightning Surge Voltage
The lightning surge voltage is a surge voltage caused by a lightning discharge.

Longitudinal Voltage Drop
The longitudinal voltage drop is a means (instead of the insertion loss) to evaluate overvoltage arresters for d.c. voltages or low operating frequencies up to a maximum of 400 Hz. The longitudinal voltage drop is measured along the current path or paths at nominal current and, where applicable, operating frequency.

Main Supply Short-Circuit Current I_K
The main supply short-circuit current is the short-circuit current which results from the impedance of the test network and the connecting cables at the installation point of the test object.

Measured Limiting Voltage
Maximum voltage that is measured at the terminals of an SPD while pulses with a preset form and amplitude are applied.

Nominal Alternating Discharge Current I_{wn}
The nominal alternating discharge current is the alternating current with frequencies between 15 and 62 Hz (primarily 50 Hz), which the test object is dimensioned for in a specific test procedure.

Leutron GmbH · Gaussstr. 2 · 70771 Leinfelden-Echterdingen · Germany · Phone +49 711 94771-0 · www.leutron.de

Nominal Impulse Discharge Current I_n
The nominal impulse discharge current is the peak value of a current with the waveform 8/20 that flows through a surge protection device. It is used to classify the test for class II surge protection devices.

Nominal Load Current I_L
The nominal load current is the maximum continuous, alternating or direct current which can flow from the output of an SPD to the connected load.

Nominal Voltage U_N
The nominal voltage, as a rounded voltage value, specified by the manufacturer of an electrical apparatus to identify it and to specify the voltage range for which it is designed.

Overvoltage Category
The overvoltage category is the classification of a piece of electrical equipment to the expected overvoltages.

Potential Equalization Conductor
The potential equalization conductor is a conductive link to achieve potential equalization.

Potential Equalization Installation
The potential equalization installation is the total of all interconnected potential equalization conductors, including all other conductive parts which work in the same way, e.g. housings or other conductive installations. The potential equalization installation can either be the earth-termination system or part of it.

Power-Frequency Withstand Voltage
The power-frequency withstand voltage is the r.m.s. value of the highest sinusoidal voltage at system frequency, which does not result in a breakdown under predefined test conditions.

Protection Level U_p
The protection level is a parameter which characterizes the performance of an SPD to limit the voltage between its terminals. The protection level is chosen from a list of standard values and has to exceed the highest value of the measured limiting voltages.

Protection Path
The parts of an SPD can be connected as “conductor against conductor” or “neutral conductor against earth”, or a combination of these possibilities. These methods of connection are called protection paths.

Pulse
A pulse is a rapid, temporary change of a physical parameter followed by a fast change back to the original value.

Rate of Rise
The rate of rise is the average change rate of a parameter between two certain values, e.g. between 10 % and 90 % of the peak value.

Rated Voltage of an Arrester U_C
Maximum acceptable root-mean-square value of the power-frequency a.c. voltage that can be permanently applied to the terminals of the arrester.

Reference Earth
Reference earth is the reference ground (especially the earth’s surface) that is so far apart from the earthing electrodes that, if a current is diverted into the ground, no relevant voltage differences occur between the points of this area.

Remote Signalling Contact
Remote signalling contacts belong to a circuit which is separated from the main circuit of the SPD. The disconnection device of the SPD and/or an operation indication are part of the same circuit.

Remote Strikes
Remote strikes cause surges with a considerable smaller energy content compared to close-up strikes.

Residual Current Protective Device (RCD)
Residual current protective devices disconnect the circuit if the residual current against earth exceeds a certain value.

Residual Voltage Ures
The residual voltage is the peak value of the voltage that appears between the terminals of an SPD during the flow of a discharge current or immediately after it.

SEMP
Switching operations are referred to with the abbreviation SEMP. This stands for switching electromagnetic pulse.
In this context, switching operations mean the switching of powerful machines or short circuits in the power supply network. During such operations, significant current changes occur in the affected cables in a split second.

Short-circuit Withstand Capability
The short-circuit withstand capability is the highest unaffected short-circuit current the surge protection device can withstand.

Sparkover Voltage
The sparkover voltage is the highest instantaneous value of the voltage at the terminals of an arrester, just before it is triggered.

Specialist in Lightning Protection
A specialist in lightning protection has a professional training, knowledge and expertise as well as knowledge of the corresponding regulations that allow him to assess the work assigned to him as well as to identify possible dangers. (To judge the professional training, one can also consider several years of working in the corresponding field.)

Status Display
The status display indicates the state of operation of an SPD.

Surge Voltage
A surge voltage is a voltage that puts people and/or technical equipment like conductors and devices at risk. It can permanently (overvoltage) or temporarily (surge voltage) occur between conductor and earth in error-free installations (in disconnected conductors as well).

Surge Protection Device (SPD)
A surge-voltage protection device limits transient surges and diverts impulse currents. It includes at least one non-linear component.

Temperature Range
The temperature range describes the lowest and highest temperatures that are allowed at or inside the housing. For devices without self-heating this range refers to the ambient temperature. For devices with self-heating it indicates the maximum operating temperature range.

TOV Characteristics
The TOV characteristics describe the behaviour of an SPD to which a temporary overvoltage (TOV) is applied for a certain period of time.

Transient
A transient is a non-periodic and very short positive or negative change of voltage or current between two steady states.

transient
A transient behaviour describes the behaviour of a phenomenon or value which changes between two consecutive steady states in a very short time in comparison to the considered timescale.

Transverse Voltage
The transverse voltage is the interference voltage which occurs between two conductors of the same circuit.

Triggering Current of the Disconnection Device
The triggering current of the disconnection device is the root-mean-square value of the current through the arrester, which causes the disconnection device to operate within 30 seconds.

Triggering
Triggering is referred to, if either the peak value of the ohmic component of the current through the arrester reaches 5 mA or a voltage drop caused by the rise of the peak value of the current through the arrester exceeds 5 mA.

Varistors
A varistor is a bipolar non-linear resistor with symmetrical voltage-current characteristics. Its resistance decreases with increasing voltage.

Withstand Voltage
The withstand voltage is the maximum voltage that can be applied to a current-limiting component of an SPD without affecting it. This voltage can be equal to the highest continuous operating voltage Uc of the SPD or higher, depending on the components inside the SPD.

Surge voltages can get into circuits in various ways. These are known as coupling types.

1. Galvanic coupling
This refers to surge voltages which are directly coupled into a circuit. This can be observed during lightning strikes, for example. In this case, lightning current amplitudes at the grounding resistance of the affected building cause a surge voltage.

This voltage affects all cables that are connected to the central equipotential bonding. A surge voltage also occurs along conductors carrying lightning current. Due to the fast current increase rate, this can mainly be traced back to the inductive component of the cable resistance. Faraday's law of induction is used as the basis for calculating this: $u0 = L \times di/dt$.

2. Inductive coupling
This process occurs through the magnetic field of another current-carrying conductor, following the transformer principle. A directly coupled surge voltage causes a surge current with a high rate of increase in the affected conductor.

At the same time, a strong magnetic field is created around this conductor, as is the case in the primary winding of a transformer. The magnetic field induces a surge voltage in other cables in its vicinity, as is the case in the secondary winding of a transformer. The coupled surge voltage is channeled along the cables into the connected device.

3. Capacitive coupling
This type of coupling primarily occurs via the electric field between two points with a large potential difference. A high potential occurs via the down conductor of a lightning arrester due to a lightning strike. An electrical field is created between the down conductor and other parts with a low potential.

These may be, for example, cables for power supply and signal transmission or devices inside the building. The charge is transferred through the electrical field. This leads to a voltage increase or ultimately a surge voltage in the affected cables and devices.

Leutron GmbH is registered in Zentrale Stelle Verpackungsregister (Central Agency Packaging Register) with register number DE5872258993777 since January 1st 2019.
