THE POWERFUL MATRIX FAMILY

Datalogic's Matrix family represents state-of-the-art performance in automatic identification solutions for factory and logistic automation, driven by our company background of more than 50 years of success.

The range consists of:

- **Matrix 120™**: the ideal solution when looking for a **product with a small size and easy integration** due to its **ultra-compact design and flexibility**
- **Matrix 220™**: compact, flexible and with high-performance - the perfect solution for **reading DPM (Direct Part Marking) barcodes**
- **Matrix 320™**: with **2MP or 5MP sensors** combined with **Liquid Lens technology** and **optional C-mount optics**, confirming our leadership in traceability applications in intralogistics and manufacturing.

NEW PREMIUM VERSION

The **Matrix 220X and 320X Premium** are designed for superior performance, thanks to a new quad-core image processing platform that can double the processing power and halve the decoding time compared to the standard version. The main customer benefits of this increased computing power translate into increased throughput, and efficiency, as well as faster handling during multi-recipe mode. The Matrix Premium can capture and process twice as many images as the standard version in a given time period.
